

Project Area Update: Further S91 Licence granted for HyEnergy® Development

Highlights:

- **Western Australian Government issues additional section 91 licence covering 1,035 square kilometres**
- **Total Project area under section 91 licences now exceeds 4,162 square kilometres**

Province Resources advises that it has executed an agreement with the Western Australian Government for the grant of an additional land licence under section 91 of the State's Land Administration Act.

The licence covers 1,035 square kilometres of land south of Carnarvon and was obtained following the consent of relevant stakeholders including pastoralists and native title holders.

Province continues to build its land interests in the Gascoyne region as it expands its footprint for the HyEnergy® green hydrogen project. The company now holds a total area of more than 4,162 square kilometres under licence.

The section 91 licences issued under Western Australia's Land Administration Act allow the company to conduct studies to support feasibility activities for the HyEnergy® Project.

The latest licence grant reinforces Province's leading position in relation to land access for green hydrogen developments in Western Australia, built on the company's strong relationships with native title holders and pastoralists.

This announcement has been approved by the Board.
