

27 June 2023

## Octagonal diamond drilling update

### HIGHLIGHTS

- Diamond drillhole OCDD003 to test Target Area A has been completed with narrow zones of nickel-copper sulphide mineralisation intersected. Downhole EM (DHTEM) is now underway
- New diamond drillhole (OCDD005) designed to test primary targets at Target Area B
- Diamond drillhole OCDD004 is now underway to test Target Area C

**Legend Mining Limited** (Legend) is pleased to provide an update on the diamond drilling at the Octagonal prospect within the Rockford Project, Fraser Range, Western Australia (see Figures 1 and 4).

Legend Executive Chair, Mr Mark Wilson said: *“There have been several encouraging aspects to both holes drilled to date with semi massive, brecciated nickel-copper sulphide remobilised into the country rock in hole 3 and mineralised intrusion at the basal contact in hole 2. It is important to note that neither hole has intersected the primary targets at Area A and Area B.*

*“We are awaiting downhole EM results from hole 3 before designing further holes at Area A and a new hole 5 has been designed to test the primary targets at Area B, with hole 4 currently in progress into a new Target Area C. Further updates will be provided as results come to hand.”*

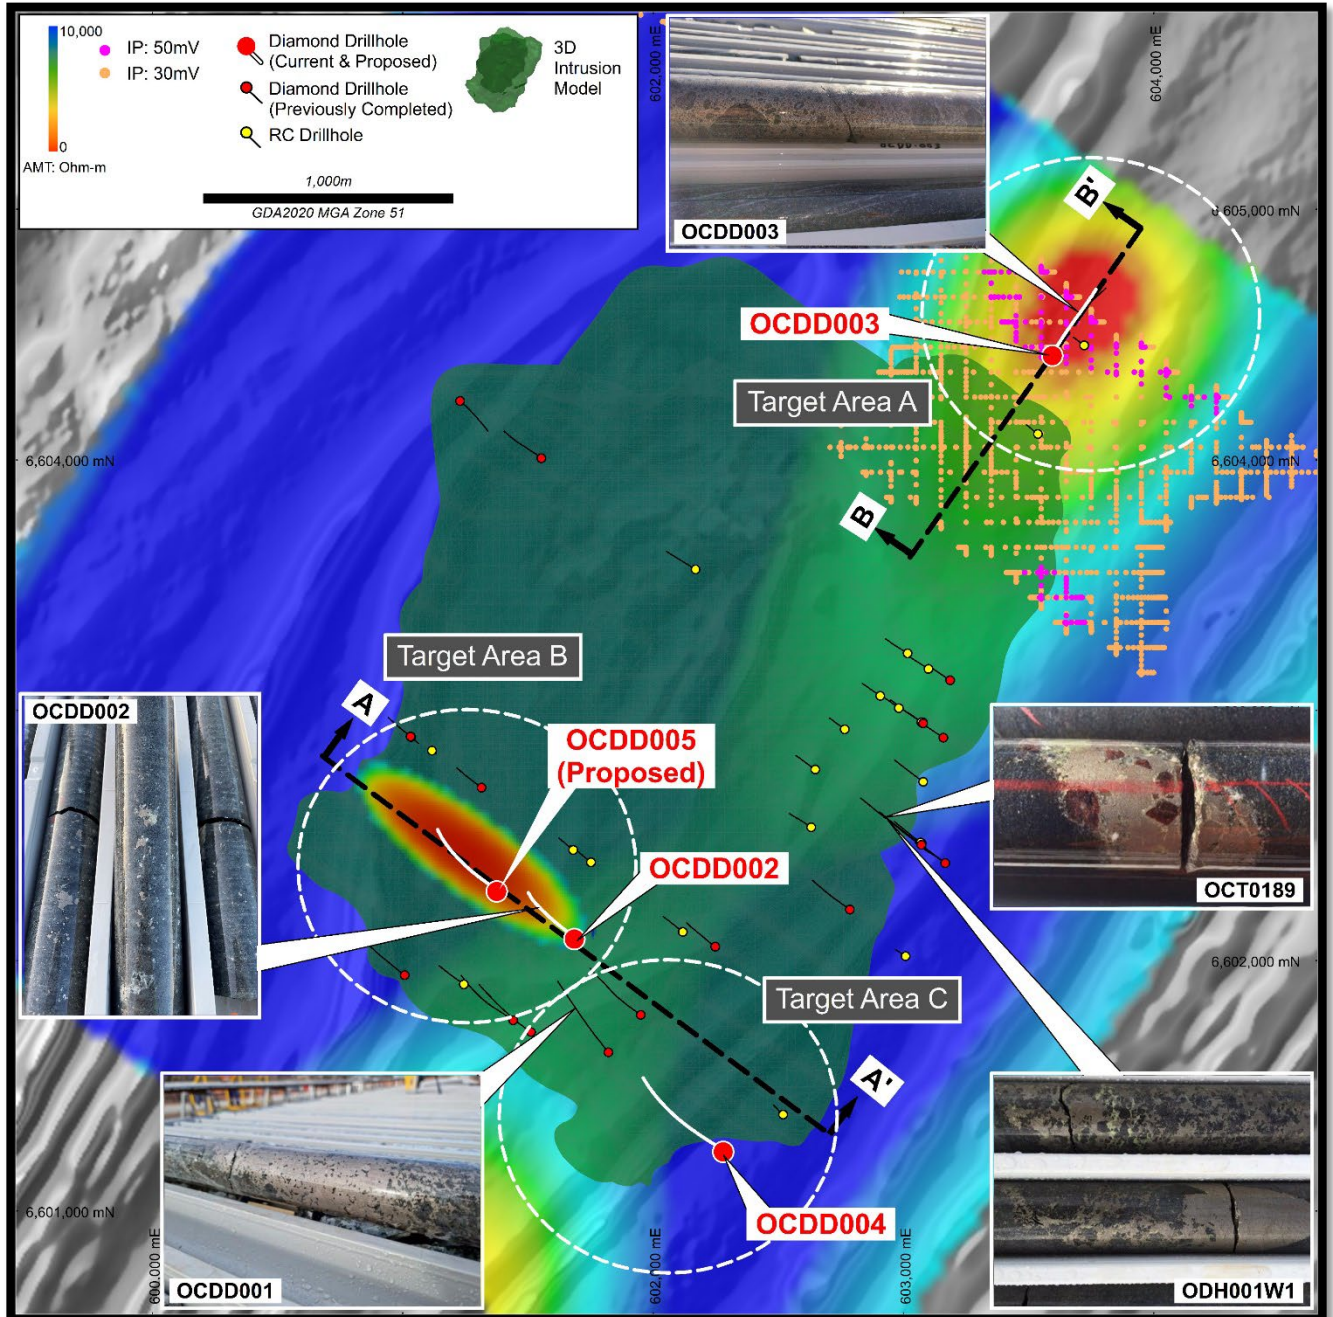

**Photo 1:** Semi-massive, brecciated Ni-Cu sulphide from diamond drillhole OCDD003 from 501m.

## TECHNICAL DISCUSSION

Diamond drilling continues at the Octagonal Prospect at the time of writing.

Below is a summary of the exploration activities across the 3 Target Areas.

**Figure 1:** Priority target areas and diamond drillholes shown with Octagonal intrusion model, IP anomalies, 2D & 3D AMT anomalies and visual Ni-Cu mineralisation on AMAG.

## TARGET AREA A

Diamond drillhole OCDD003 targeted interpreted extensions of the Octagonal intrusion based on seismic interpretation. Beyond this, the drillhole was designed to test the extension of a highly chargeable IP trend before continuing to test the top of a large AMT conductor (see Figures 1 and 2). Narrow 'fingers' of intrusion were encountered where the intrusions was predicted to extend from seismic interpretation. Narrow zones of Ni-Cu sulphide mineralisation were also intersected, including a zone of semi-massive, brecciated Ni-Cu sulphide (see Photo 1) which has been remobilised into the metasedimentary country rocks. This is further evidence of the Octagonal intrusion cracking into the surrounding country rock, and an encouraging sign for deposition of Ni-Cu sulphide given the right structural trap.

Early indications are that the moderate level (5-10 ohm-m) AMT target is derived from magnetite. The drillhole was ceased at 909.4m due to a distinct change in geology, specifically a transition to a mafic gneiss and orthogneiss assemblage, which is interpreted as the Nova footwall sequence (below the Nova intrusion). DHTEM is underway at the time of writing to assess if extending drillhole OCDD003 is warranted or drilling of a new drillhole.

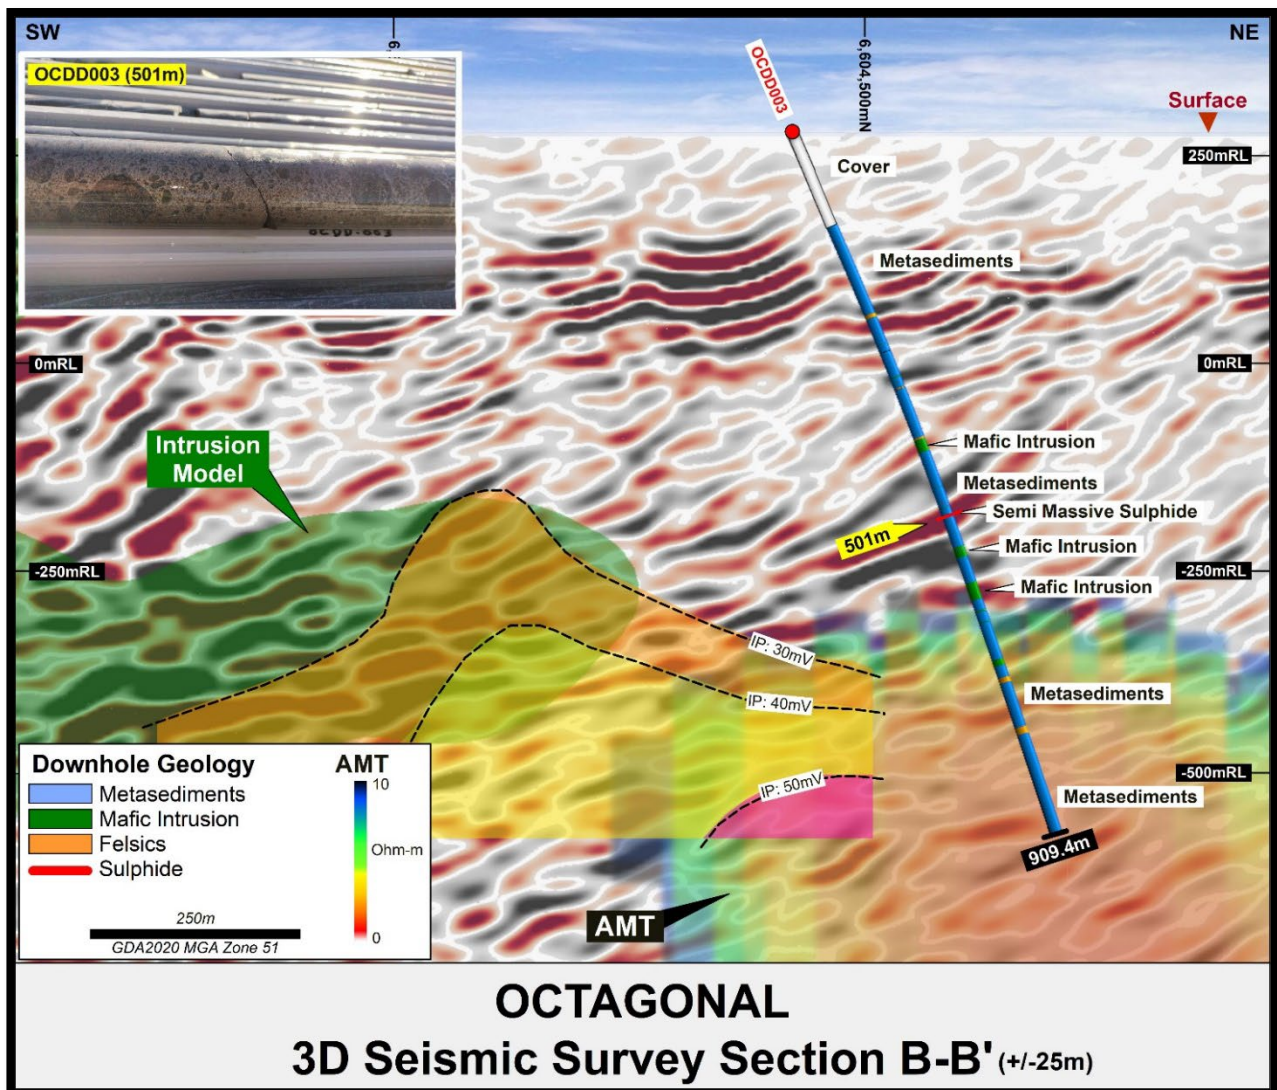

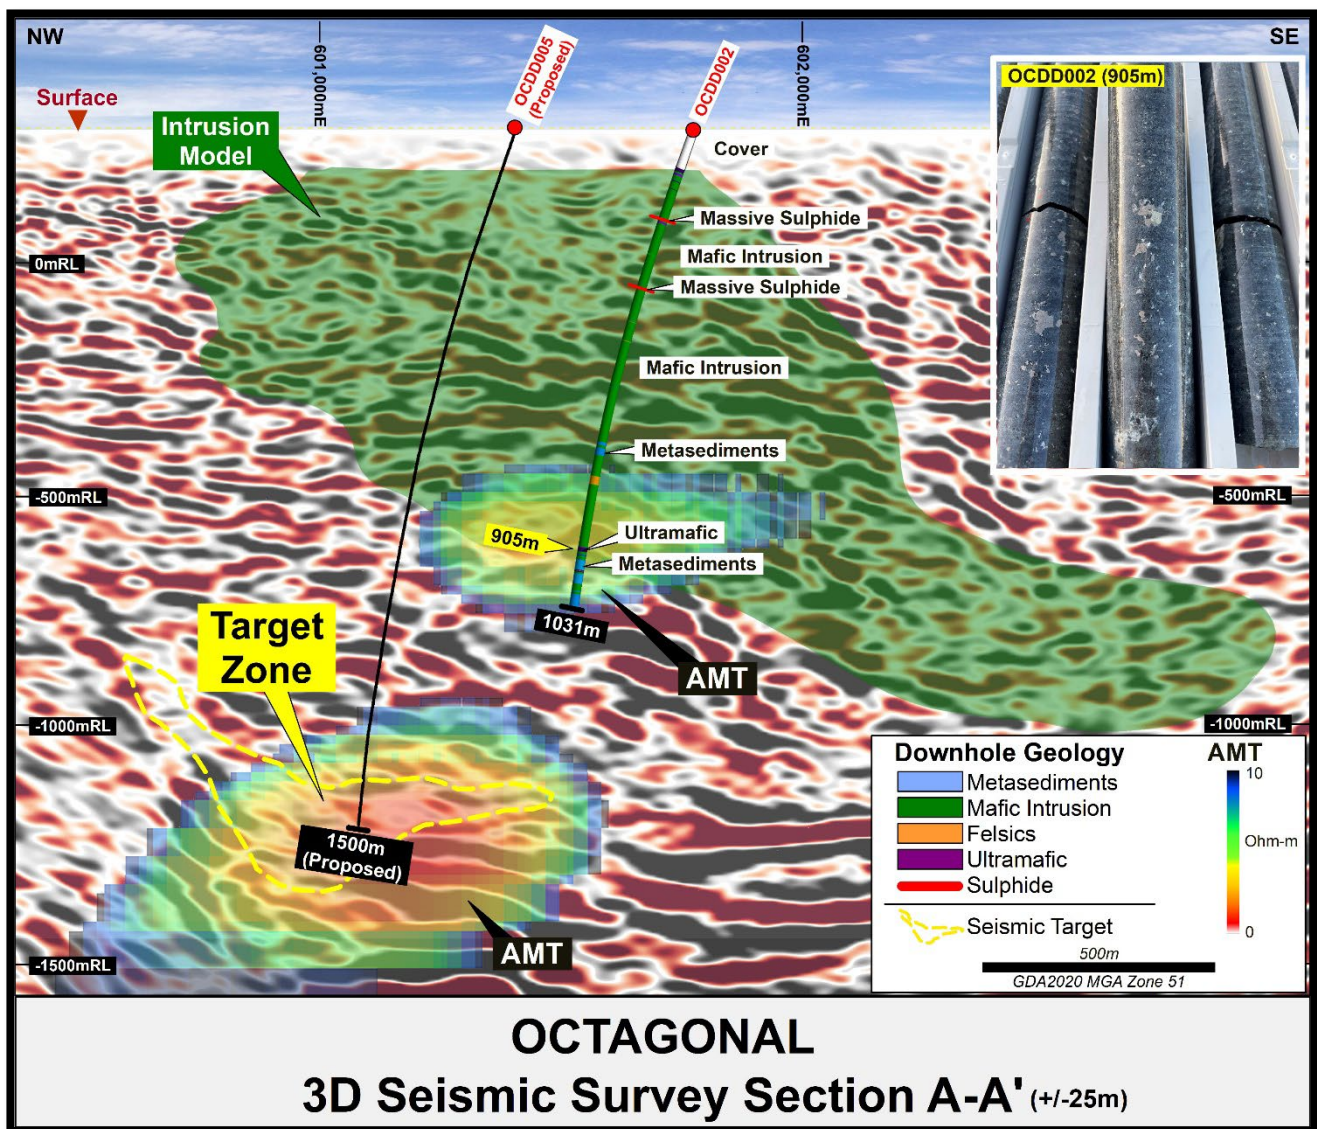

Figure 2: Section B-B' showing drillhole OCDD003 on seismic section and downhole geology.

## TARGET AREA B

Diamond drillhole OCDD002 dropped more than the planned trajectory, which would have resulted in the drillhole missing the primary seismic and AMT targets at Target Area B. As a result, a decision was made to cease the drillhole at 1031m. DHTEM has subsequently been conducted on OCDD002, with no conductors identified. The primary targets of Target Area B will now be tested with a new drillhole, OCDD005 (see Figures 1 and 3).

OCDD002 delivered some highly encouraging results, including a mineralised ultramafic intrusion with blebby Ni-Cu sulphide and intense carbonate digestion at the base of the Octagonal intrusion (see photo in Figure 3). This is an important indicator as the favourable carbonate horizon is a key stratigraphic marker unit for Ni-Cu mineralisation at the Nova-Bollinger deposit. These visual intersections confirm the prospectivity of the Octagonal intrusion at depth and validate Legend's exploration model to test the base and below the Octagonal intrusion.

**Figure 3:** Section A-A' showing drillhole OCDD002 on seismic section and downhole geology, with proposed drillhole OCDD005 and primary seismic and AMT targets .

## TARGET AREA C

Target Area C will see diamond drillhole OCDD004 target the interpreted 'keel zone' of the Octagonal intrusion based on seismic interpretation (see Figure 1). This zone is defined by a junction of structures interpreted to be the source pathway of the Octagonal intrusion. The drillhole is designed to test the eastern hanging wall contact, which is the site of numerous Ni-Cu intercepts to date from previous drilling. OCDD004 will then test the Octagonal intrusion through to the basal contact position. DHTM will be completed on completion of the drillhole.

Diamond drilling of OCDD004 is underway at time of writing (see Photo 2).

**Photo 2:** *Diamond drilling continues at Octagonal at Target Area C.*

## FUTURE OCTAGONAL PROGRAMME

- Diamond drilling of OCDD004 into Target Area C
- Diamond drilling of OCDD005 into Target Area B
- DHTEM on OCDD003
- DHTEM on OCDD004 and OCDD005 once completed
- Downhole petrophysics on completed drillholes
- Assaying of selected intervals

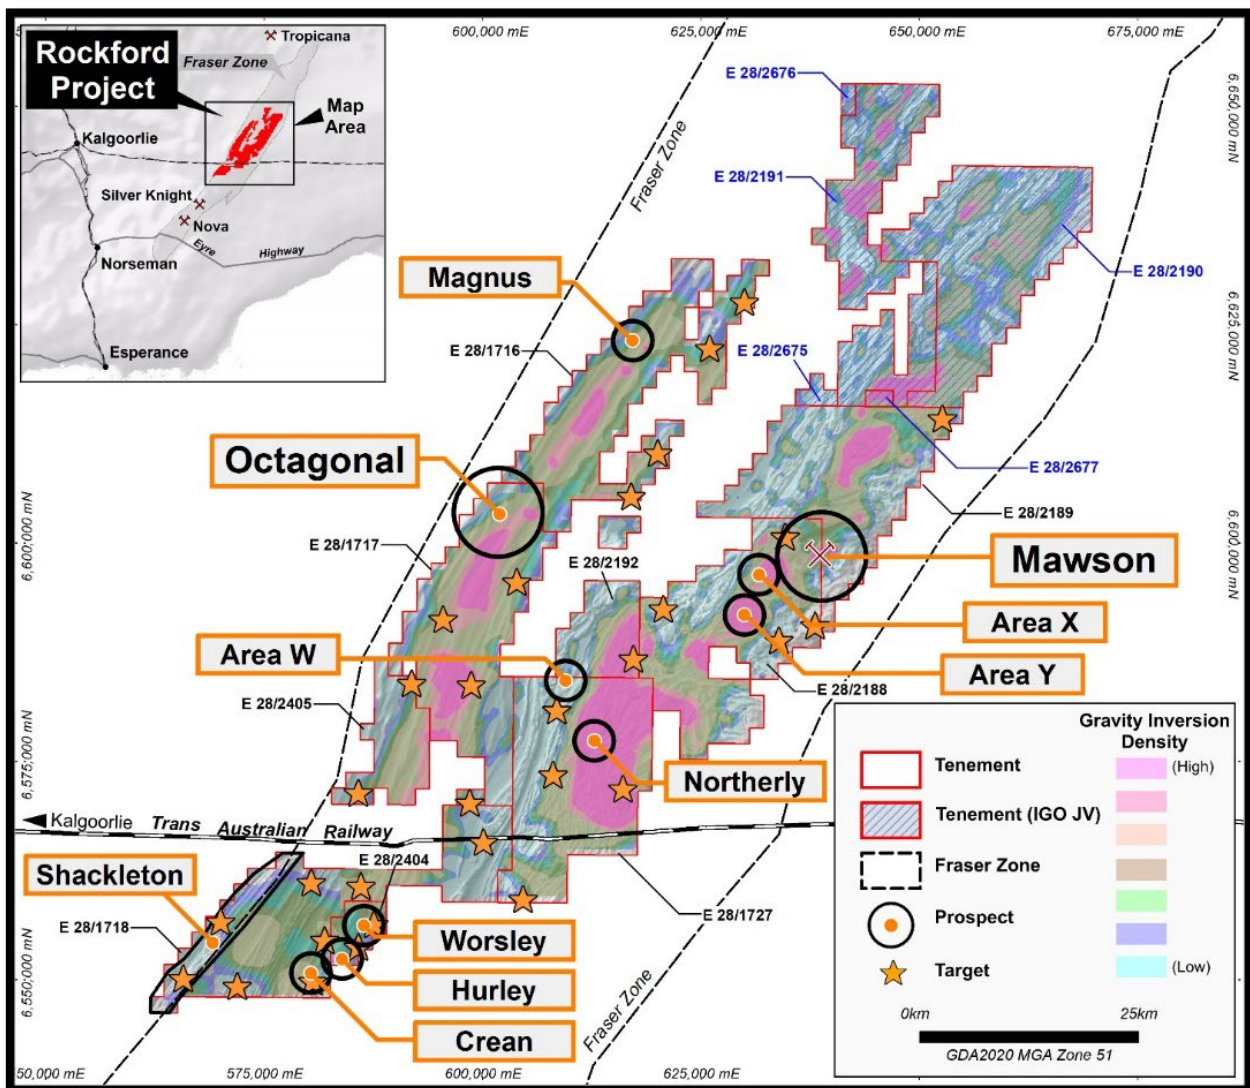

Figure 4: Rockford Project Prospect Locations on Gravity.

## Appendix 1 – Summary Drill Log of Ni-Cu Mineralisation

Hole	Interval	Sulphide Mode	Sulphide Type	Sulphide % (Visual Estimate)
OCDD002	205.54m - 205.6m	Massive sulphide	Pyrrhotite-chalcopryrite-pentlandite	>80%
OCDD002	206.88m – 210.0m	Disseminated	Pyrrhotite-chalcopryrite-pentlandite	1% - 5%
OCDD002	210.33m - 210.84m	Disseminated	Pyrrhotite-chalcopryrite-pentlandite	1% - 5%
OCDD002	317.33m - 326.99m	Disseminated	Pyrrhotite-chalcopryrite-pentlandite	1% – 5%
OCDD002	344.74m - 344.78m	Massive Sulphide	Pyrrhotite-chalcopryrite-pentlandite	>80%
OCDD002	383.68m - 383.94m	Disseminated	Pyrrhotite-chalcopryrite-pentlandite	1% - 5%
OCDD003	500.62m – 501.0m	Semi Massive	Pyrrhotite-chalcopryrite-pentlandite	40% - 80%
OCDD003	501.0m – 502.0m	Net Textured	Pyrrhotite-chalcopryrite-pentlandite	20% - 40%
OCDD003	502.0m - 502.66	Disseminated	Pyrrhotite-chalcopryrite-pentlandite	1% - 5%

**Cautionary Statement:** The sulphide percentage is a visual estimate of total sulphide. Visual estimates should never be considered a proxy or substitute for laboratory analysis where concentrations or grades are the factor of principal economic interest. Visual estimates also potentially provide no information regarding impurities or deleterious physical properties relevant to valuations.

Legend regularly uses a portable XRF (pXRF) analyser to screen diamond drill core for mineralisation prior to cutting and sampling. This allows for understanding of the distribution of mineralisation prior to sampling to better ensure that the sampled core is representative of the type and style of mineralisation. Readings are obtained and recorded for future reference. The pXRF provides confirmation that mineralisation is present however it is not an accurate determination of the elemental concentration within the sample analysed. Limitations include; very small analysis window, possible inhomogeneous distribution of mineralisation, analytical penetration depth and possible effects from irregular rock surface. The pXRF readings are subject to confirmation by chemical analysis from an independent laboratory.

## Appendix 2 – Octagonal Diamond Drillhole Details

Hole	Type	MGA2020-East	MGA2020-North	RL	Azimuth	Dip	Total Depth
OCDD002	DD	601,685	6,602,095	267	306	-70	1,031m
OCDD003	DD	603,595	6,604,425	263	034	-65	909.4m
OCDD004* (Proposed)	DD	602,280	6,601,245	266	300	-65	1,350m (Proposed)
OCDD005 (Proposed)	DD	601,375	6,602,285	268	302	-70	1,500m (Proposed)

\*OCDD004 in progress  
Co-ordinates GDA2020 Zone 51

## Appendix 3 - Legend Field Logging Guidelines

Sulphide Mode	Percentage Range
Disseminated & blebby	1-5%
Heavy Disseminated	5-20%
Matrix	20-40%
Net-Textured	20-40%
Semi-Massive	>40% to <80%
Massive	>80%

## **Competent Person Statement**

*The information in this report that relates to Exploration Results is based on information compiled by Mr Oliver Kiddie. Mr Kiddie is a Member of the Australasian Institute of Mining and Metallurgy and a full-time employee of Legend Mining Limited. Mr Kiddie has sufficient experience that is relevant to the styles of mineralisation and types of deposit under consideration, and to the activity being undertaken, to qualify as a Competent Person as defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves" (JORC Code). Mr Kiddie consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.*

*The information in this report that relates to Legend's Exploration Results is a compilation of previously released to ASX by Legend Mining (28 March 2023, 20 April 2023, 17 May 2023, and 5 June 2023). Mr Oliver Kiddie consents to the inclusion of these Results in this report. Mr Kiddie has advised that this consent remains in place for subsequent releases by Legend of the same information in the same form and context, until the consent is withdrawn or replaced by a subsequent report and accompanying consent. Legend confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements and that all material assumptions and technical parameters in the market announcements continue to apply and have not materially changed. Legend confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcements.*

## **Forward Looking Statements**

*This announcement contains "forward-looking statements" within the meaning of securities laws of applicable jurisdictions. Forward-looking statements can generally be identified by the use of forward-looking words such as "may", "will", "expect", "intend", "plan", "estimate", "anticipate", "believe", "continue", "objectives", "outlook", "guidance" or other similar words, and include statements regarding certain plans, strategies and objectives of management and expected financial performance. Forward-looking statements are provided as a general guide only and should not be relied upon as an indication or guarantee of future performance. These forward-looking statements are based upon a number of estimates, assumptions and expectations that, while considered to be reasonable by Legend Mining Limited, are inherently subject to significant uncertainties and contingencies, involve known and unknown risks, uncertainties and other factors, many of which are outside the control of Legend Mining Limited and any of its officers, employees, agents or associates.*

*Actual results, performance or achievements may vary materially from any projections and forward-looking statements and the assumptions on which those statements are based. Exploration potential is conceptual in nature, to date there has been insufficient exploration to define a Mineral Resource and it is uncertain if further exploration will result in the determination of a Mineral Resource. Readers are cautioned not to place undue reliance on forward-looking statements and Legend Mining Limited assumes no obligation to update such information made in this announcement, to reflect the circumstances or events after the date of this announcement.*

Visit [www.legendmining.com.au](http://www.legendmining.com.au) for further information and announcements.
