

30 SEPTEMBER 2020 QUARTERLY REPORT

Alto continues to deliver high-grade gold results and secures \$5.5m to test multiple targets along the 3km Lords' corridor as part of a 30,000m drilling program

SANDSTONE GOLD PROJECT HIGHLIGHTS

Sandstone Gold Project

Located in a world class gold province in WA

Current resource is 6.2Mt @ 1.7 g/t gold for 331,000oz

Multiple targets

Multi million oz potential

Significant landholding of over 800km² within a major gold district

Capital Structure

Issued Shares: 373m

Share Price: \$0.11

Market Cap: \$41m

Directors

Non-Executive Chairman
Richard Monti

Managing Director

ONGOING EXPLORATION

- Alto's **immediate exploration strategy is focused** on targeting both shallow gold mineralisation along the +3km Lords' corridor and primary mineralisation beneath the Lord Nelson open pit.
- Ongoing geological targeting has identified **multiple drill-ready targets** along the corridor to be tested for repeat lodes, with the first 5,000m of a planned 30,000m RC drill program, about to commence.

Orion Lode

- Final fire assay results received during the quarter from infill drilling at the Orion Lode confirms excellent continuity of the shallow high-grade gold mineralisation from oxide and transitional zone. Significant intercepts include:
 - 29m @ 3.5g/t gold** from 49m, incl. **7m @ 7.9g/t gold** from 53m (SRC191)
 - 13m @ 3.3g/t gold** from 83m, incl. **2m @ 8.8g/t gold** from 85m (SRC205)
 - 16m @ 3.1g/t gold** from 105m, incl. **2m @ 7.7g/t gold** from 118m (SRC192)
 - 32m @ 1.4g/t gold** from 51m (SRC183)
- Step out drilling (80 metres) returned **7m @ 2.7g/t gold** from 155m, including **2m @ 6.3g/t gold** from 159m (SRC197) and has now defined the gold mineralisation foot print of Lord Nelson to over 1km.
- Mineralisation **remains open along strike, down dip and down plunge.**

Primary mineralisation beneath the Lord Nelson Pit

- Final fire assay results received during the quarter from step-out RC drilling (up to 80m) beneath the Orion Lode and Lord Nelson pit extended the known high grade mineralisation down dip and down plunge, including:
 - 32m @ 2.5g/t gold** from 223m, incl. **4m @ 12.3g/t gold** from 245m (SRC184)
 - 7m @ 4.6g/t gold** from 209m, incl. **2m @ 11.6g/t gold** from 210m (SRC209)
- Several **high-grade intersections remain outside the current resource**, awaiting close spaced drilling.

EXCELLENT GOLD RECOVERIES

- Subsequent to the quarter, Alto announced the results of preliminary test work with **gold recoveries averaging 96%** in Lord Nelson primary zone mineralisation and **>93%** in oxide and transitional zones from previous metallurgical testwork.
- Testwork carried out to date confirms the oxide, transitional and primary mineralisation at Lord Nelson is **amenable to conventional cyanide extraction.**

CORPORATE

- During the quarter Alto received commitments to raise \$5.5 million through a share placement at an issue price of \$0.075 cents per share. The placement settled in early October and was strongly supported by existing major shareholders and a number of new, resource focused institutional investors.
- The unsolicited takeover offer by Habrok (Alto) Pty Ltd to acquire all the issued shares in Alto for A\$0.07 cash per share and a separate cash offer to acquire all the issued options lapsed during the quarter.
- The Company continues to focus on increasing its investor marketing activities, including attending the 121 Mining Investment APAC virtual conference, RIU Resurgence Conference, Diggers & Dealers and upcoming Noosa Mining Conference, in addition to a number virtual and physical investor and broker presentations.
- At the end of the quarter Alto's cash position was \$219,000 which included the conversion of options expiring in August and November. Subsequent to the quarter, the Company received \$5.5m (before costs) through the settlement of the placement. An additional \$1.9m is anticipated to be received during the December quarter through the conversion of the remaining options expiring in November. The Company currently has in place an unsecured Loan Facility with major shareholder Windsong Valley for up to \$1m, of which \$450,000 has been drawn down and a second unsecured loan facility for a further \$1m. This second loan remains undrawn and the Company intends to cancel this facility now the placement has settled. These loan facilities were put in place at the time to ensure the Company was able to continue exploration and meet working capital requirements due the restricted ability of Alto to raise funds as a result of the Goldsea and Habrok takeover offers.

Quarterly activities statement for the period ending 30 September 2020

Alto Metals Limited ("Alto" or "the Company") (ASX: AME) is pleased to provide an update on activities for the September quarter 2020, within the Company's +800km² Sandstone Gold Project ("Sandstone Gold Project").

EXPLORATION AT LORD NELSON

Final 1m fire assay results from the recent RC drilling program highlights shallow high-grade gold mineralisation with excellent continuity from the new Orion Lode.

During the quarter, Alto reported the final 1m fire assay results from its latest phase of 5,562m of RC drilling targeting high-grade gold mineralisation beneath the Lord Nelson open pit and the new Orion lode, discovered 200m south of the Lord Nelson open pit.

The Orion Lode is **the first new gold lode discovered**, within the Lords' corridor; which extends over 3 kilometers, with the Lord Nelson deposit at the north and the Lord Henry deposit to the south.

The Orion Lode strikes NNW-SSE and dips moderately to the west, see Figures 1 to 3. The geology and mineralisation observed at the **Orion Lode is identical to the mined oxide portion of the Lord Nelson deposit**.

The current drilling program infilled the shallow portion of the Orion Lode on 40m by 20m spacing and extended the lode up to 300m along strike and 200m down dip. Mineralisation was intersected in extensional drilling (up to 80m spacing) confirming the Orion Lode **remains widely open along strike, down dip and down plunge** (Figures 1 to 3).

RC drill results show the **presence of high-grade gold mineralisation within a much broader mineralisation envelope** (Refer to Figure 3, Section 6,883,470mN). The consistency of these results in the oxide, transitional and primary zone suggests that the oxide and transitional zones at the Orion Lode are hypogene (not supergene) in nature, highlighting the significant potential immediately below the weathering profile (30-70m below surface).

Importantly, the Orion Lode is considered to be a repeat lode of the Lord Nelson deposit (Figure 4) with the majority of the mineralisation defined to date, in the oxide and transitional zone. This geological model further predicts the **significant potential for multiple Lord Nelson style repeat lodges**, coincident with splays (Trafalgar splay) and cross-cutting structures, to exist along the +3km Lords' Corridor (Figure 4).

Alto expects to commence the next phase of 5,000m of wide spaced RC drilling program this week (see Figure 1). This drill program is part of an overall 30,000m of planned drilling to test multiple targets along the Lords' Corridor and additional regional targets. (Refer to Planned Exploration Activities, p. 7 for further information)

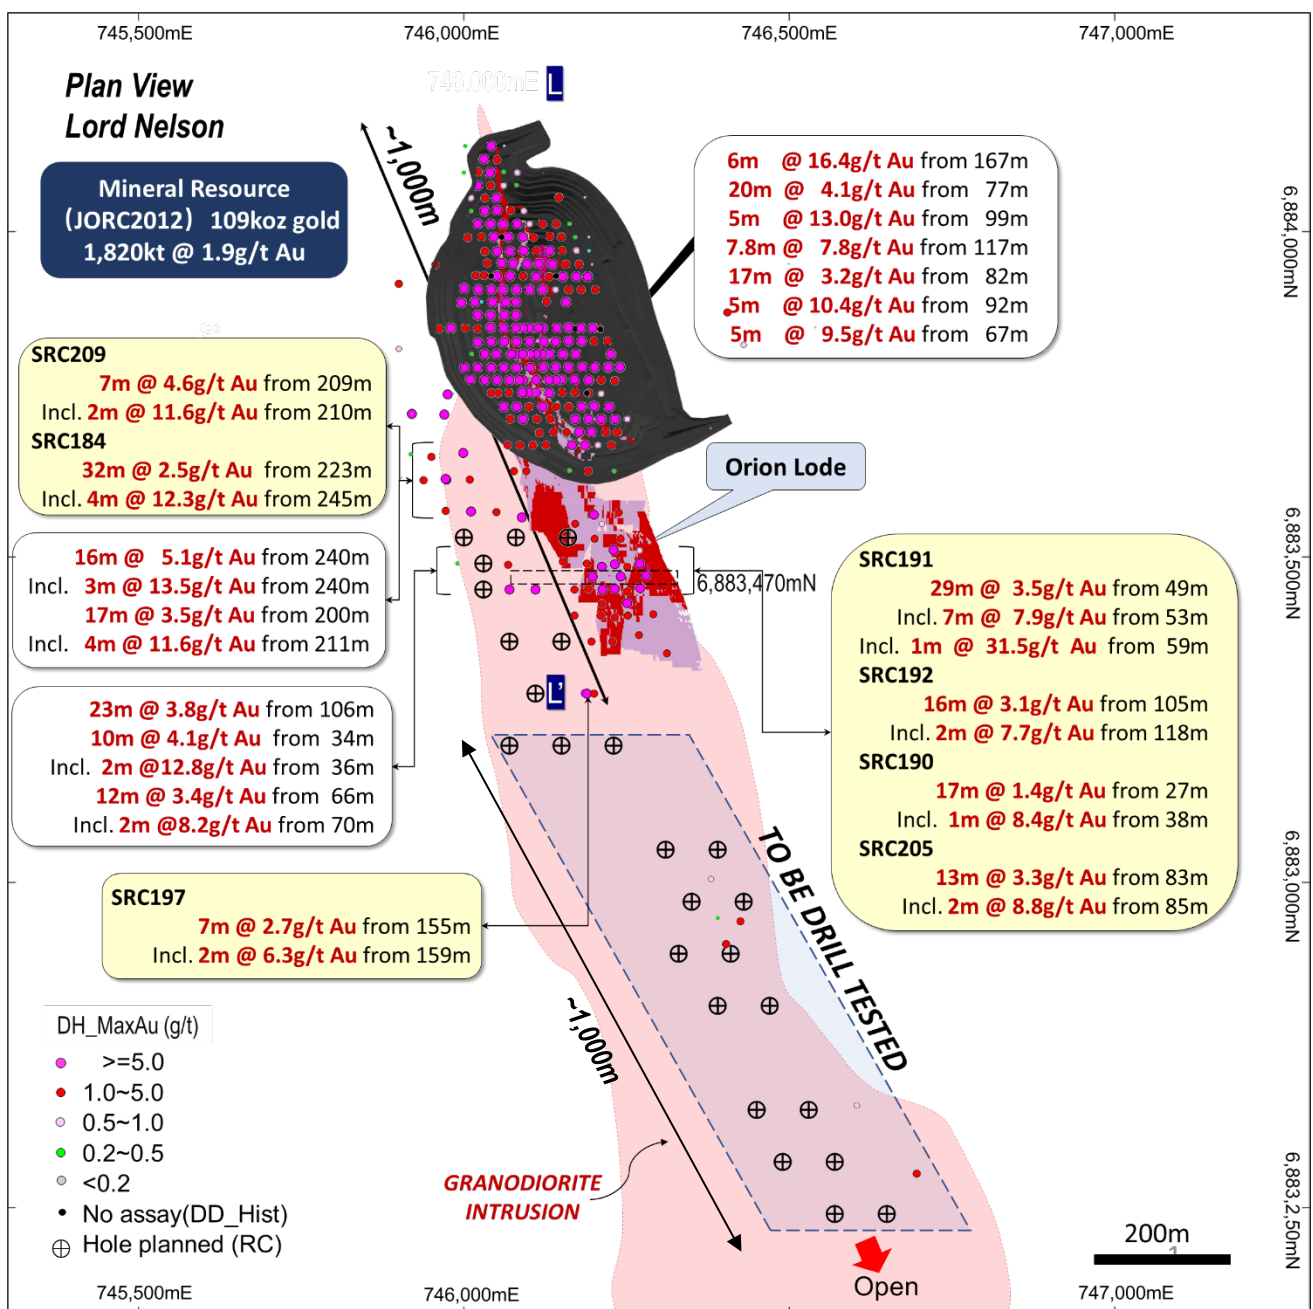

Figure 1. Lord Nelson plan view showing significant assay results.

Orion Lode - oxide and transitional zone

The latest one-metre fire assay results received during the quarter from 20m to 40m spaced infill drilling, continue to suggest excellent continuity of the shallow high grade gold mineralisation from oxide and transitional zone, with numerous significant **+40 grams/ton*metres ("gtm") gold intercepts** including:

- **29m @ 3.5g/t gold** (102gtm) from 49m, including **7m @ 7.9g/t gold** from 53m (SRC191)
- **13m @ 3.3g/t gold** (43gtm) from 83m, including **2m @ 8.8g/t gold** from 85m (SRC205)
- **16m @ 3.1g/t gold** (50gtm) from 105m, including **2m @ 7.7g/t gold** from 118m (SRC192)
- **32m @ 1.4g/t gold** (45gtm) from 51m (SRC183)

Previous results from the Orion lode, south of Lord Nelson, include:

- **23m @ 3.8g/t gold** (87gtm) from 106m (SRC168) ASX release 02/04/20
- **10m @ 4.1g/t gold** (41gtm) from 34m, including **2m @ 12.8g/t gold** from 36m (SRC169) ASX release 02/04/20
- **12m @ 3.4g/t gold** (41gtm) from 66m (SRC148) ASX release 22/07/19

Orion Lode – extended along strike

An **80m step out** drill hole returned **7m @ 2.7g/t gold** from 155m, including **2m @ 6.3g/t gold** from 159m (SRC197) and has now defined the Orion Lode over 300m and **extended the overall mineralised footprint** of Lord Nelson to over 1,000m.

Primary high grade mineralisation beneath the Lord Nelson pit & Orion Lode

One-metre fire assay results received during the quarter from 40m to 80m step-out drilling, targeting the primary high grade gold zone beneath the Lord Nelson pit, included **multiple +10g/t gold intercepts** and extended the high grade gold mineralisation down-dip and down-plunge with excellent continuity in primary zone. These results are **outside** of the current Mineral Resource and include:

- **32m @ 2.5g/t gold** from 223m, including **4m @ 12.3g/t gold** from 245m (SRC184)
- **7m @ 4.6g/t gold** from 209m, including **2m @ 11.6g/t gold** from 210m (SRC209)
- **8m @ 2.5g/t gold** from 190m, including **2m @ 7.8g/t gold** from 194m (SRC214)

Previous results from **Lord Nelson primary high grade zone beneath the current pit, include:**

- **16m @ 5.2g/t gold** from 240m, including **3m @ 13.5g/t gold** from 240m (SRC176) ASX release 22/04/20
- **17m @ 3.5g/t gold** from 200m, including **4m @ 11.6g/t gold** from 211m (SRC175) ASX release 22/04/20

Refer to Figures 1 to 3.

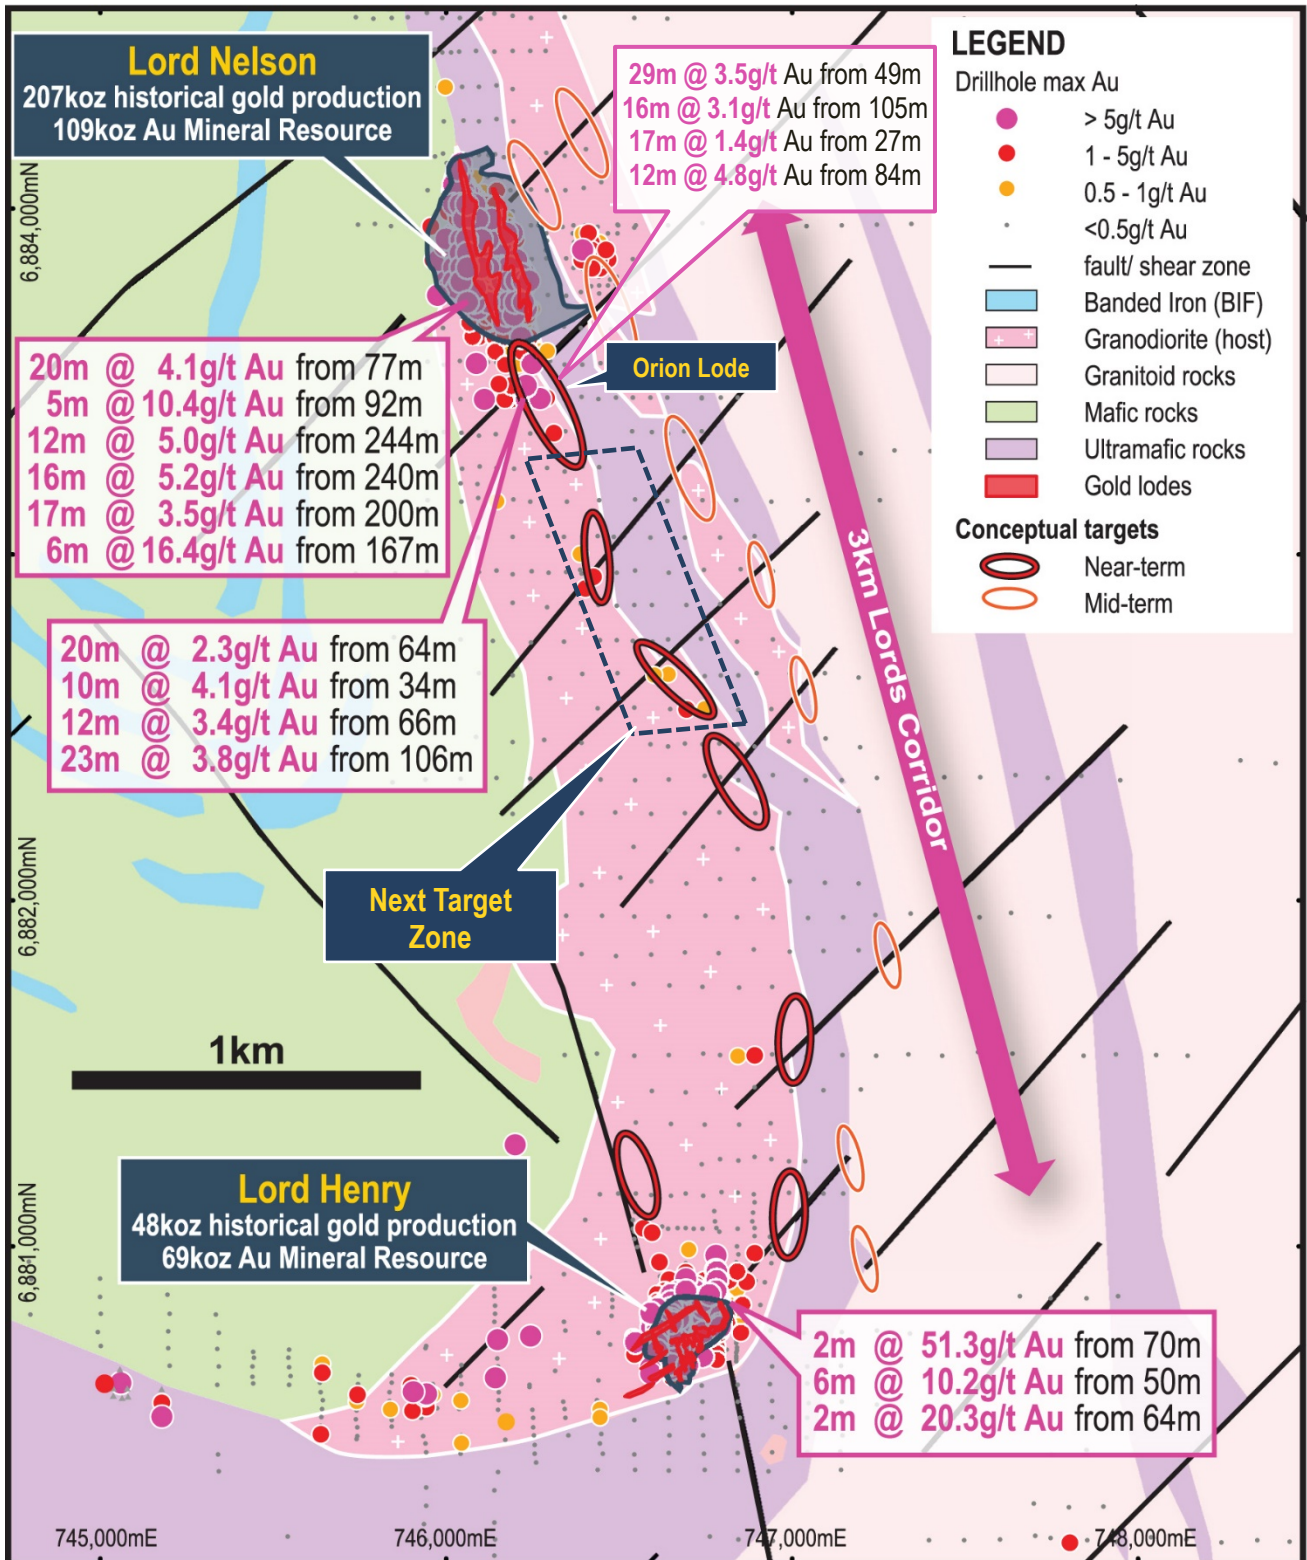

Figure 4. Lords Deposits and +3km Lords' Corridor - 1:5,000 geological interpretation (labelled drill results are from unmined zones).

REGIONAL EXPLORATION – MULTIPLE TARGETS

While Alto’s immediate exploration strategy is focused on the Lords’ corridor and the Lord Nelson Pit, the Company has commenced a review of the multiple other targets within the Sandstone Gold Project.

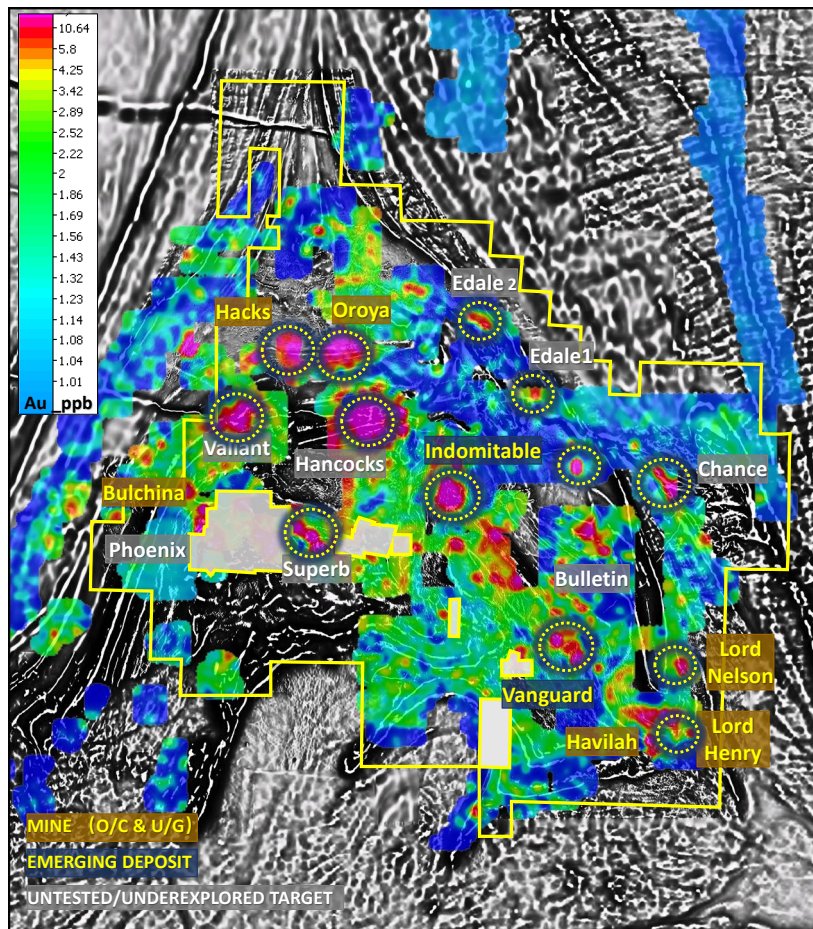

Figure 5. Location of gold prospects and historical mines at Sandstone Gold Project

Surface soil geochemistry over airborne magnetic image

PLANNED EXPLORATION ACTIVITIES – DRILL TEST REPEAT LODGE TARGETS ALONG THE CORRIDOR

Alto has completed 5,562m of RC drilling since July 2020, and a total of 9,280m since January 2020. The latest results received during the quarter continue to support the Company’s exploration strategy and justification for its priority focus at Lord Nelson and the Lords’ corridor.

Following the completion of the recent capital raising, the next exploration program has been increased to 30,000m of RC drilling to test the entire 3km Lords’ Corridor and a number regional targets. The start of the first 5,000m phase of wide spaced RC drilling program (Refer to Figure 1), was impacted due to a significant level of drilling activity in WA and a lack of available drill crews as a result of border closures. However, a rig and crew has now been secured and drilling is expected to commence shortly to test:

- **Potential repeat gold lodes** along the next 1km of the Lords’ corridor; and
- Strike and plunge extensions of **high-grade mineralisation of the new Orion Lode**.

An additional 25,000m of RC drilling is planned to commence in early 2021, to include:

- Exploration drilling to test the **additional near-term targets along the +3km Lords’ corridor**;
- **Depth extensions of primary high-grade gold mineralisation** beneath the Lord Nelson pit and Orion Lode;
- Exploration at **regional targets** including Vanguard and Indomitable Camps and Chance prospect; and
- **Multiple other targets** within the +800km² Sandstone Gold Project area.

PRELIMINARY TESTWORK

Subsequent to the quarter, Alto provided shareholders with an update on preliminary gold recovery testwork from various prospects at the Sandstone Gold Project, including Lord Nelson..

Primary Mineralisation

During August 2020, Alto collected 4 RC drill samples within primary zone mineralisation with gold grades ranging from ~3 g/t Au to ~11 g/t Au and submitted the samples to Intertek Genalysis (Intertek) for Accelerated Cyanide Leach LeachWELL™ testwork. Sample details and results are summarised in Table 1. The sampling and testwork methodology is described in more detail further below.

The preliminary testwork was carried out to determine the cyanide extractable gold and **to provide an indication of the potential gold recovery in metallurgical processes and circuits** of the Lord Nelson primary mineralisation. This testwork is preliminary in nature and Alto intends to carry out further gold recovery testwork as the project continues to be advanced.

All four samples reported an **average gold recovery of 96%** suggesting the gold within the Lord Nelson primary zone mineralisation is amenable to conventional cyanide extraction methods.

Table 1. Summary of Accelerated Cyanide Leach Testwork at Lord Nelson.

Deposit	Hole ID	From (m)	To (m)	Head Grade ¹ (g/t Au)	Leach Grade ² (g/t Au)	Tail Grade ³ (g/t Au)	Recovery (%)	Rock Type
Lord Nelson	SRC169	36	40	7.14	7.88	1.67	82.5%	Oxide
	SRC168	116	120	4.28	5.39	0.17	96.9%	Fresh
	SRC175	211	215	10.1	9.24	0.14	98.5%	Fresh
	SRC176	240	244	10.5	11.5	0.52	95.7%	Fresh
	SRC188	248	250	3.21	3.08	0.15	95.4%	Fresh

Footnotes: 1 Grade by 50gm FA on "A" sample. 2 Grade by LeachWELL™ on "B" sample. 3 Grade by 50gm FA on "B" sample tail

Oxide and Transitional Mineralisation

A further sample was collected within oxide zone mineralisation at Lord Nelson and submitted to Intertek for the same testwork (refer Table 1 above). This sample returned a gold recovery of 82.5%.

More rigorous metallurgical testwork was previously carried out at Lord Nelson by Troy Resources NL (Troy) as part of initial feasibility study work on both oxide and transitional ore (Troy, 2009). This testwork determined:

- Lord Nelson ore was found to be free milling.
- Gravity gold recovery was found to be required to prevent coarse gold entering the leach circuit and being partially lost to the tailings and it was estimated that over 20% of total gold could be recovered as concentrate from the oxide ore and close to 40% for the transitional ore.
- Acceptable **gold recoveries of >93% for oxide and transitional ores** were obtained after 24 hours of direct cyanide leaching.

Troy mined the Lord Nelson deposit as an open pit mine to ~90m below surface between 2005 and 2010 and recovered 207koz at 4.6 g/t Au. The ore was processed through Troy's Sandstone treatment plant, which had a general design flow sheet described by Troy as fairly typical of other gold plants in operation on the WA goldfields (Troy, 2009)¹.

Troy reported that **recovery of gold at the Sandstone plant typically ranged from 93% to 96%** with total recovery in the period July 2006 to end of June 2007 (i.e. during mining and processing of Lord Nelson) of 94.4%.

Preliminary Gold Recovery testwork at Indomitable & Vanguard Camps, Havilah and Ladybird

In 2018 and 2019 the Company announced maiden mineral resource estimates for the Vanguard Camp, Indomitable Camp, Havilah and Ladybird deposits of 5.4Mt @ 1.7g/t for 290,000 ounces gold (refer to ASX announcements on 25/09/18 and 11/06/19).

As part the Mineral Resource estimation, Alto collected and submitted a total of 25 samples to Intertek Genalysis for Accelerated Cyanide Leach LeachWELL™ testwork.

Samples comprised various grades and lithologies within oxide, transitional and primary mineralisation as summarised in Table 2.

An **average gold recovery of >92%** was reported indicating the mineralisation at these deposits is also amenable to conventional cyanide extraction methods.

Accelerated Cyanide Leach LeachWELL™ Methodology

Analysis was carried out by Intertek Genalysis (Intertek) in Maddington. Intertek stated that “*High grade cyanide leaches utilise the LeachWELL™ accelerant to determine the cyanide extractable gold and provide an indication of potential recoveries in metallurgical processes and circuits. Recovery and analysis of the residues provide the option of reporting total gold values and thus determining the refractory gold fraction*”².

Alto’s samples comprised 10kg composite samples collected using split pvc from the 1m RC intervals. Samples were submitted to Intertek in Maddington, dried and split into two equal 5kg portions labelled “A” and “B”.

Sample A was crushed to 2mm, a split was taken and pulverised to 75um followed by 50gm fire assay for gold (Intertek Genalysis method code FA50/AA).

Sample B was pulverised to nominal 90% passing 106um. A 1kg split was analysed by 24 hour pH10 cyanide leach (Accelerated Cyanide Leach LeachWELL™) with an ICP-MS finish for gold (Intertek Genalysis method code LW1000/MS).

The tails were recovered, washed, re-homogenised and analysed by 50gm fire assay for gold (Intertek Genalysis method FA50T/OE).

An estimate of gold recovery was calculated as a percentage using the results from the above two methods and the formula:

$$\text{Recovery (\%)} = (\text{LW1000/MS}) / [(\text{LW1000/MS}) + (\text{FA50T/OE})] \times 100$$

Table 2: Drill hole information (MGA94 Zone 50) (ASX release 02/10/20)

Deposit	Hole ID	Easting	Northing	mRL	Dip	Azimuth	Depth
Lord Nelson	SRC169	746270	6883490	473	-60	90	80
	SRC168	746213	6883450	475	-60	90	140

CORPORATE

\$5.5m Share Placement completed successfully – to accelerate drilling and exploration

During the quarter Alto raised \$5.5 million via a single tranche placement (**Placement**) comprising the issue of approximately 74.4 million shares at an issue price of \$0.075 cents per share. The Placement was completed at an 11.8% discount to Alto's to the last trading price of \$0.085 per share on Wednesday, 16 September 2020 and was strongly supported by existing major shareholders and a number of new, resource focused intuitional investors.

Proceeds from the Placement will primarily be used to advance exploration and drilling activities at the Sandstone Gold Project, as well as general working capital purposes. Refer to Planned Exploration on page 7, for further information.

The Company also intends to seek shareholder approval to raise a further \$900,000 through a placement to Alto's Directors, including major shareholder Windsong Valley, on the same terms as the Placement.

Cash & Finances

At the end of the quarter Alto's cash position was \$219,000 which included the conversion of options expiring in August and November. Subsequent to the quarter, the Company received \$5.5m (before costs) through the settlement of the placement. Approximately an additional \$1.9m is anticipated to be received during the December quarter through the conversion of the remaining options expiring in November.

The expenditure incurred on exploration activities during the quarter as summarised in this report is approximately \$214,000. No expenditure was incurred on mining production or development activities during the quarter.

Payments totaling approximately \$60,000 were made to related parties of the Company, as shown in the Appendix 5B. These payments related to consulting fees payable to directors.

Loan Agreements

The Company has a Loan Facility Agreement in place with its largest shareholder, Windsong Valley Pty Ltd for an unsecured amount of up to \$1,000,000 (Windsong Facility). This was put in place to ensure the Company was able to continue exploration and meet working capital requirements due the restricted ability to raise funds as a result of the Goldsea and Habrok takeover offers. The Company has drawn down a total of \$450,000 of the Windsong Facility.

Alto also has additional \$1,000,000 short term, unsecured bridge loan facility with substantial shareholder Harvest Lane Asset Management Pty Ltd (Harvest Lane Facility). This additional facility was put in place to enable the Company to continue exploration drilling and meet working capital requirements, whilst the Habrok takeover offer continued. The Harvest Lane Facility remains undrawn. Following the successful completion of the recent Placement, this facility is no longer required and the Company intends to terminate the facility.

Tribute Agreements

During the quarter the Company received ~32oz of gold under a tribute agreement, from a total of ~213oz of gold recovered from the 3 Mile area E57/1030. Prospecting activities over this area have now ceased.

Lapse of Habrok (Alto) Pty Ltd unsolicited takeover offer

The unconditional cash offer of \$0.07 per share for all the issued shares in the Company and a separate cash offer for the Company's options from Habrok (Alto) Pty Ltd, lapsed on 29 September 2020. Total acceptances under the offer were less than 1%.

This quarterly report has been authorised by the Board of Alto Metals Limited.

Forward-Looking Statements

This release may include forward-looking statements. Forward-looking statements may generally be identified by the use of forward-looking verbs such as anticipate, aim, expect, intend, plan or similar words, which are only predictions and are subject to risks, uncertainties and assumptions which are outside the control of Alto Metals Limited. Actual values, results or events may be materially different to those expressed or implied in this release. Given these uncertainties, recipients are cautioned not to place reliance on forward-looking statements. Any forward-looking statements in this release speak only at the date of issue. Subject to any continuing obligations under applicable law and the ASX Listing Rules, Alto Metals Limited does not undertake any obligation to update or revise any information or any of the forward-looking statements in this release or any changes in events, conditions or circumstances on which any such forward-looking statement is based.

Competent Persons Statement

The information in this Report that relates to current and historical Exploration Results is based on information compiled by Dr Changshun Jia, who is an employee and security holder of Alto Metals Limited. Dr Jia is a Member of the Australian Institute of Geoscientists and has sufficient experience of relevance to the styles of mineralisation and the types of deposits under consideration, and to the activities undertaken, to qualify as a Competent Person as in the 2012 Edition of the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Dr Jia consents to the inclusion in the report of the matters based on the information in the context in which it appears.

Previously Reported Results

There is information in this report relating to Mineral Resource estimates, which have been cross referenced to previous market announcements made by the Company. The Company confirms that it is not aware of any new information or data that materially affects the information included in the relevant market announcements and, in the case of estimates of Mineral Resources that all material assumptions and technical parameters underpinning the Mineral Resources estimates in the relevant market announcement continue to apply and have not materially changed. With regards to Exploration Results, please refer to ASX announcement for full details on these exploration results. Alto Metals Ltd is not aware of any new information or data that materially affects the information in the said announcements.

Mineral Resources – Sandstone Gold Project

Table 4 below shows the current Total Indicated & Inferred Mineral Resources (JORC 2012) for the Sandstone Gold Project at 30 September 2020.

Table 4: Sandstone Gold Project – Summary of Total Mineral Resources (JORC 2012)

Deposit	Category	Cut-off (g/t Au)	Tonnage (kt)	Grade (g/t Au)	Contained gold (oz)
Lord Henry ¹	Indicated	0.8	1,200	1.6	65,000
TOTAL INDICATED			1,200	1.6	65,000
Lord Henry ¹	Inferred	0.8	110	1.3	4,000
Lord Nelson ^{2,5}	Inferred	0.8	1,820	1.9	109,000
Indomitable & Vanguard Camp ³	Inferred	0.3-0.5	2,580	1.5	124,000
Havilah & Ladybird ⁴	Inferred	0.5	510	1.8	29,000

About Alto Metals and the Sandstone Gold Project

Alto Metals Limited is a Western Australian based company and is focused on gold exploration in Australia. The company holds ~800 km² of the prospective Sandstone Greenstone Belt, ~600km north east of Perth in the East Murchison Mineral Field of Western Australia (Figure 7).

Since acquiring the Project in June 2016, Alto has compiled and reviewed a large legacy database ahead of a series of focused exploration drilling campaigns which commenced in November 2016, and which have defined JORC (2012) Mineral Resources of 331,000 ounces gold and numerous drill ready targets using a systematic Mineral System approach.

8.6 Total available funding (Item 8.4 + Item 8.5)	1,769
8.7 Estimated quarters of funding available (Item 8.6 divided by Item 8.3)	3.7
8.8	If Item 8.7 is less than 2 quarters, please provide answers to the following questions:
1.	Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?
	Answer:
2.	Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?
	Answer:
3.	Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?
	Answer:

Compliance statement

- 1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.
- 2 This statement gives a true and fair view of the matters disclosed.

29 October 2020

Date:

Authorised by:The Board of Alto Metals Limited.....
(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg Audit and Risk Committee]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
