

## Corporate Presentation

Manhattan Gold Corporation Limited (ASX: MHC) (**the Company**) is pleased to release its corporate presentation incorporating recently completed mapping and digitisation of extensive historic datasets at the Hook Lake Gold Project in Nunavut, Canada.

The presentation integrates previously announced high grade gold and silver rock chip results together with initial fixed wing magnetic survey data and a refined geological interpretation of the project area. The compilation of historic information materially enhances the Company's understanding of structural controls, mineralised trends and priority drill targets across the project.

The updated presentation outlines the 2026 exploration strategy including permitting progress and a staged drill program targeting orogenic gold systems within the greenstone belt, high grade zinc copper gold silver VMS mineralisation and banded iron formations across the broader Hook Lake tenure.

The presentation also provides updated information on assay results reported by Novo Resources Corp. (ASX NVO) which is farming into the northern portion of the Company's Tibooburra Gold Project near Broken Hill in New South Wales.

The Company looks forward to advancing both projects through systematic exploration programs in 2026 and to providing regular updates to shareholders as work progresses

Authorised for release by the Chairman of the Board.
