

QUARTERLY ACTIVITIES REPORT MARCH 2022

HIGHLIGHTS

- Completion of MLEM survey at Mulga Tank Ni-Cu-PGE Project with 12 major bedrock conductor anomalies identified
 - Drill targeting work at Mulga Tank complete and maiden ten-hole diamond drilling program commenced after quarter end
 - Successful sale of Pavarotti Project iron ore rights with cash payment of \$200,000 received after quarter end
 - Grant of Pinyalling Project tenement E59/2486, adding lithium potential to the Company's commodity exposure, along with significant news flow at Tempest Minerals (ASX:TEM) nearby Meleya Project
 - The Company remains well funded, with \$4.2m cash at quarter end (excluding sale of Pavarotti iron ore rights) and is entering an exciting period of exploration at the flagship Mulga Tank Project
-

Western Mines Group Ltd (WMG or Company) (**ASX:WMG**) is pleased to provide shareholders with the following Quarterly Activities Report, and accompanying Appendix 5B, for what has been a significant few months for the Company.

The Company completed the long-running Moving Loop Electromagnetic (MLEM) survey at the flagship Mulga Tank Ni-Cu-PGE Project during the period. The survey identified 12 major bedrock anomalies and subsequent targeting work has defined numerous exciting drill targets (*ASX, Mulga Tank Ni-Cu-PGE Project: Major Targets Drill Ready, 6 April 2022*) that will be tested with an initial ten-hole diamond drilling program totalling 4,050m. This drilling program commenced after the quarter end on 20 April 2022.

WMG's systematic exploration approach combining geophysical, geological and geochemical vectoring work continues to build a robust exploration model for the discovery of nickel sulphide mineralisation within this large and highly prospective ultramafic intrusion. The Company looks forward to ongoing news flow from the Mulga Tank Project over at least the next three months.

During the quarter the Company successfully negotiated the sale of the iron ore rights at the Pavarotti Project (tenements E77/2478 and E77/2746) to Mineral Resources Ltd (ASX:MIN). A cash payment of \$200,000 was received after the quarter end, with a potential royalty payable to WMG of up to 1.25% also part of the sale consideration. WMG maintains 100% of the rights to all other mineral commodities within the tenements and continues to remain focused on the Ni-Cu-PGE potential of the project.

Market Cap: \$12.95m

Cash: \$4.54m (30/12/21)

Whilst Mulga Tank has been the Company's main focus during the period, exploration work has continued at a number of other projects including Jasper Hill and Pinyalling, with the grant of Pinyalling tenement E59/2486. This project adds lithium potential to the Company's commodity exposure, close to Golden State Mining's (ASX:GSM) Payne's Find Lithium Project. This part of the Murchison region has recently received a significant uptick in exploration interest and attention, with significant news flow from Tempest Mineral's (ASX:TEM) nearby Meleya Project Orion discovery.

PROJECT OVERVIEW

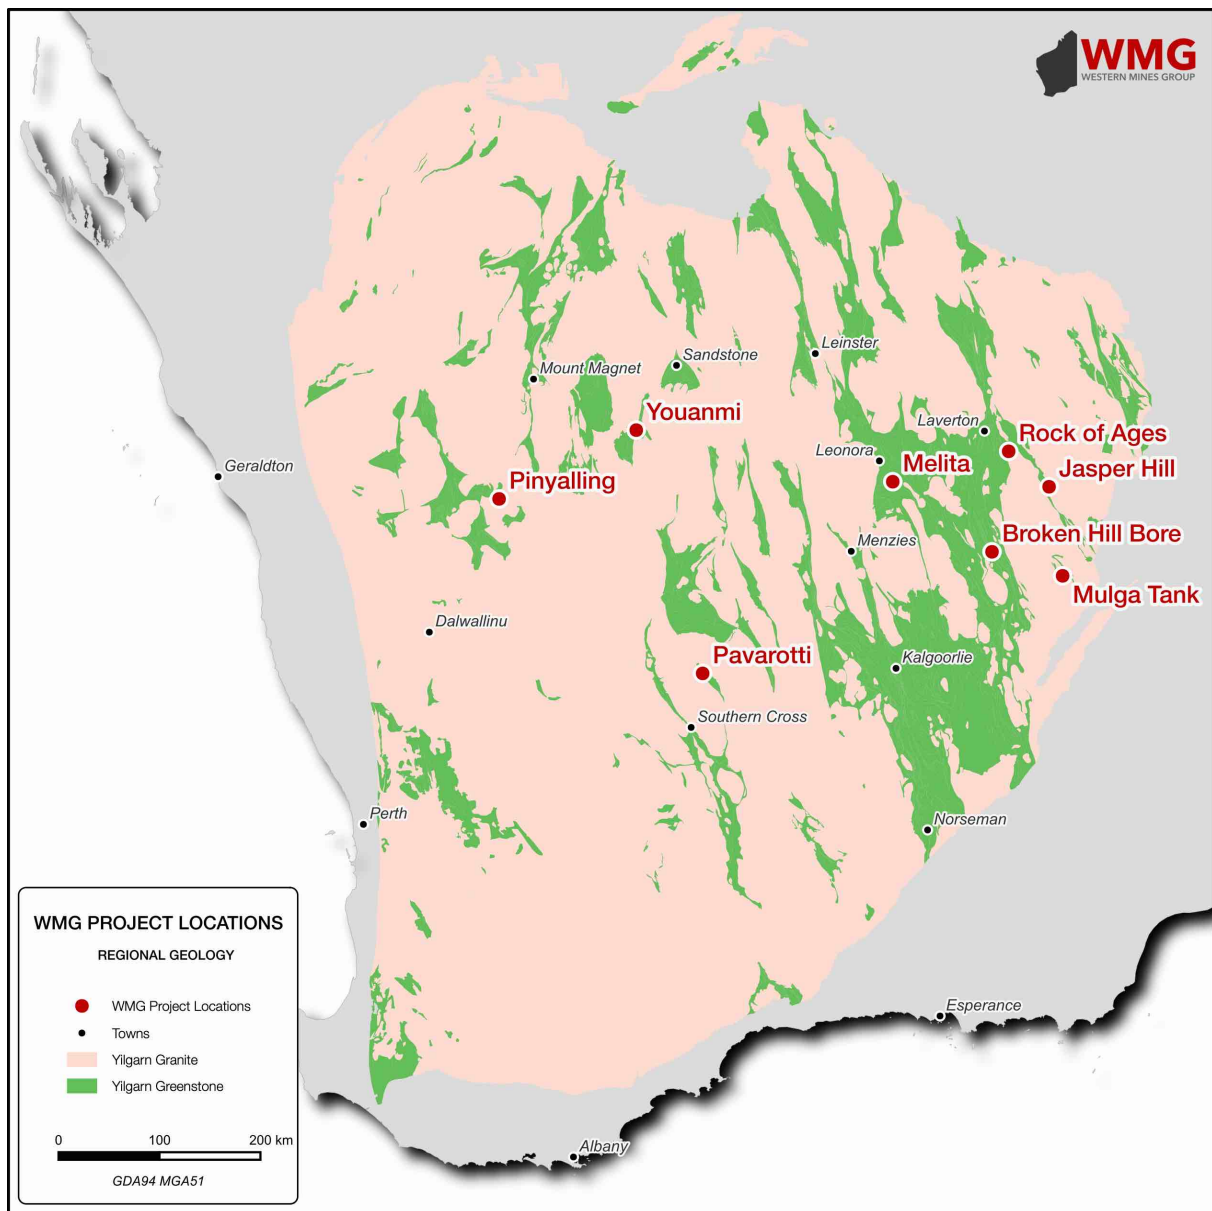

Figure 1: Map of WMG project locations

MULGA TANK

The Mulga Tank Project comprises exploration licence E39/2132 and exploration licence applications E39/2223 and E39/2299, covering the Minigwal Greenstone Belt, 190km east-northeast of Kalgoorlie. The Minigwal Greenstone Belt is a NNW trending linear sequence of predominantly mafic and ultramafic lithologies; it is very under explored due to the presence of shallow sand cover and presents a “frontier” exploration opportunity for major Ni-Cu-PGE and orogenic gold deposits.

WMG has undertaken a high-powered Moving Loop Electromagnetic (MLEM) survey at Mulga Tank with the goal of identifying electromagnetic bedrock conductors that could be associated with deposits of massive Ni-Cu-PGE sulphides. This survey is one of a range of ground geophysical methods being used to explore the Mulga Tank Dunite Intrusion (ASX, *Geophysical Surveys to Unlock Mulga Tank Ni-Cu-PGE Project*, 25 August 2021).

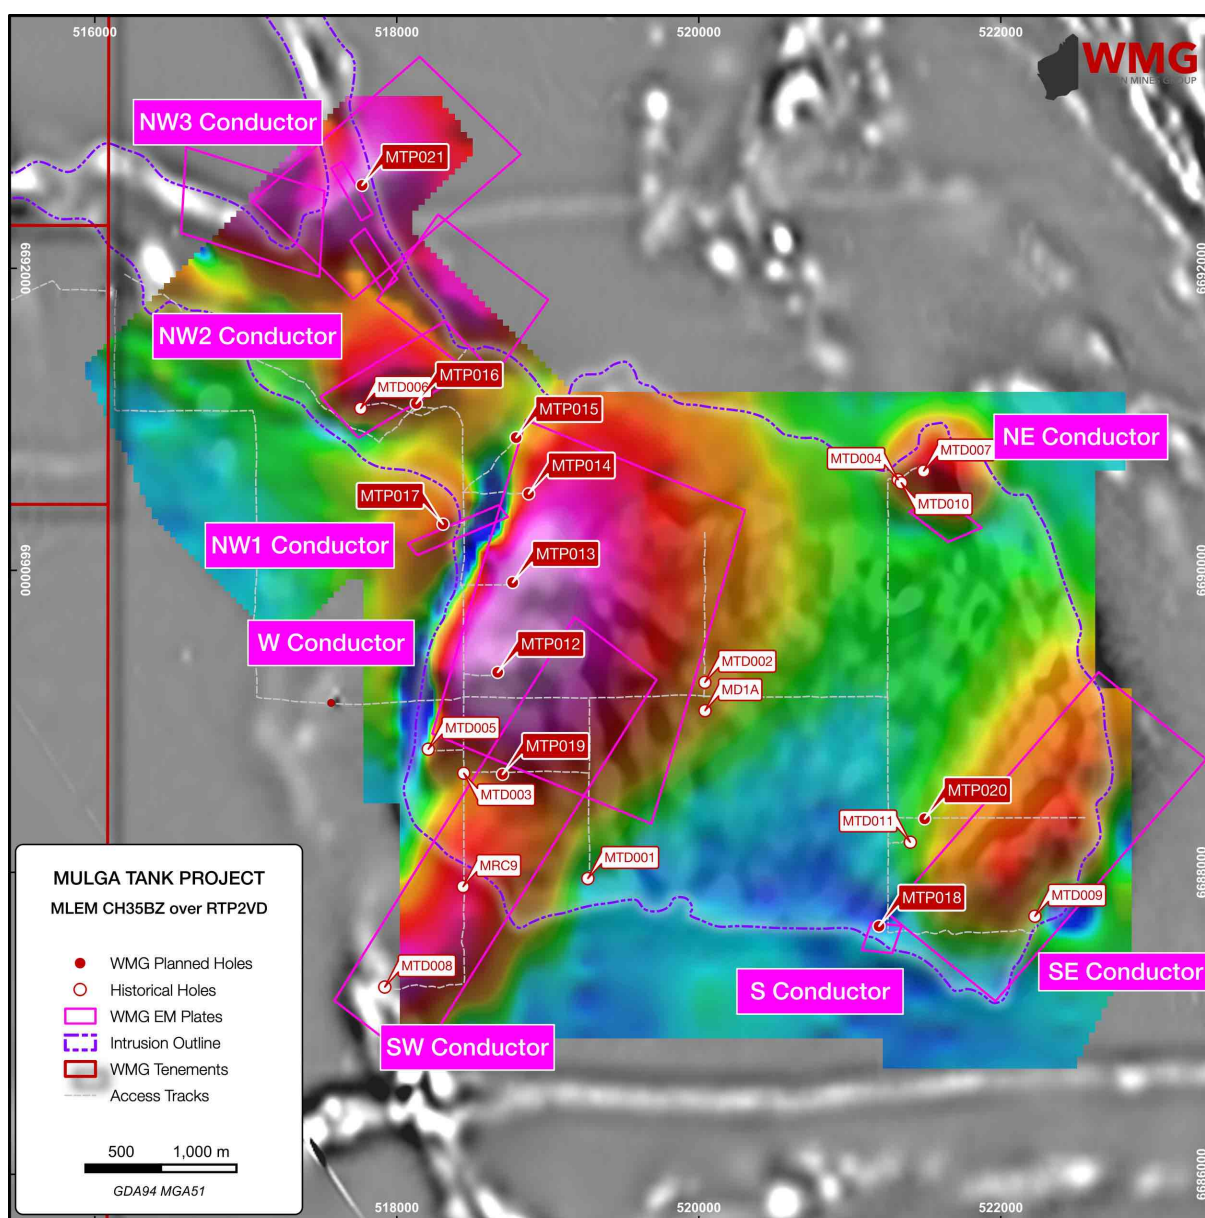

Figure 2: Mulga Tank MLEM mid-late channel CH35BZ image showing EM plates and WMG's planned drill holes

The MLEM survey was completed during the quarter with 12 major bedrock conductor anomalies identified (ASX, *Major EM Targets Identified at Mulga Tank Ni-Cu-PGE Project, 7 March 2022*) (Table 1 and Figure 2).

Target	Aerial Size (m)	Conductance (S)	Depth to Top (m)	Comments
W Conductor	~1,000x1,000m	~2,000-3,000	~150-250m	Moderate conductance, shallow to moderate E/ESE dip, shallow NE plunge
SW Conductor	~750x1,000m	~1,000-2,000	~100-150m	Moderate conductance, shallow to moderate E dip, moderate NE plunge
S Conductor	~350x350m	~500-750	~100-125m	Low to moderate conductance, moderate N dip 55-65
SE Conductor	~1,000x1,000m	~500-4,000	~150-250m	Low to moderate conductance, moderate NW dip 50-65
NE Conductor	~150x500m	~2,000-3,000	~125-175m	Moderate conductance, moderate N dip 50-60, shallow moderate NE plunge
	~450x600m	~1,250-1,500	~250-300m	Moderate conductance, shallow to moderate N dip 30-40
NW1 Conductor	~200x600m	~500-750	~100-150m	Low to moderate conductance, steep NW-NNW dip 65-75
NW2 Conductor	~400x750m	~4,000-8,000	~500-550m	High conductance, moderate N dip 30-45, shallow NE plunge
NW3 Conductor	~1,000x1,000m	~5,000-8,000	~550-600m	High conductance, shallow N dip 15-25
NW4 Conductor	~400x600m	~1,000-3,000	~175-200m	Moderate conductance, moderate NE dip 35-45
NW5 Conductor	~500x800m	~500-1,000	~150-200m	Moderate conductance, moderate NE dip 35-45
NW6 Conductor	~200x400m	~1,000-1,500	~125-150m	Moderate conductance, moderate-steep NE dip 50-60
NW7 Conductor	~200x400m	~750-1,250	~100-125m	Moderate conductance, steep NE dip 60-70

Table 1: Summary of Mulga Tank MLEM targets

Subsequent targeting work has designed an initial ten-hole diamond drilling program, totalling 4,050m, to test numerous exciting drill targets defined across the project (ASX, *Mulga Tank Ni-Cu-PGE Project: Major Targets Drill Ready, 6 April 2022; Drilling Commences at Mulga Tank, 20 April 2022*). The targets and drill holes were selected based on a combination of geophysical modelling of the recent MLEM results along with geological interpretation of the intrusion and geochemical vectoring work. Follow-up holes will be planned based on the interpretation of initial pXRF and DHEM results, which would see this initial program expand.

All permitting approval and logistical preparation for the drilling program was undertaken in parallel with the targeting work which enabled the program to commence shortly after the technical work was complete (drilling commenced 20 April 2022). The program is anticipated to take around three months, with each hole taking between eight and fifteen days, depending on depth.

HoleID	Target	Description
MTP012	Geology	Testing western margin of the intrusion between holes MTD003, MTD005 and the W Conductor
MTP013	EM	Testing basal contact of western margin at top of W Conductor
MTP014	EM	Testing basal contact of western margin at top of W Conductor
MTP015	Geology	Longitudinal geological section through the neck of the <i>Panhandle</i> at top of the W Conductor, to confirm intrusive or extrusive related model of intrusion geometry, with implications for belt wide targeting
MTP016	Geology/EM	Following up on high grade result of remobilised sulphides in hole MTD006 0.25m at 3.8% Ni, 0.7% Cu and 0.7g/t PGE, up dip of NW2 Conductor and along northern margin of gravity high body
MTP017	EM	Discrete EM anomaly along margin of coincident gravity high body in unusual orientation on western margin of intrusion
MTP018	EM	Discrete EM anomaly on southern margin of the intrusion in highly favourable basal contact position
MTP019	Geology/EM	Testing down dip MTD003 intersection of 1m at 1.13% Ni and 0.49g/t Pd on the basal contact with coincident EM anomaly
MTP020	Geology	Testing down dip of hole MTD011 that showed multiple zones of nickel sulphide mineralisation
MTP021	EM	Testing up dip component of NW3 Conductor

Table 2: Descriptions of Mulga Tank Drill Targets

WMG is pleased to commence the Mulga Tank drilling program after the culmination of months of technical and preparation work. The Company looks forward to updating shareholders on its progress as this exciting drilling program develops.

For further information on the drilling program, including descriptions of the targeting work please refer to recent ASX announcements.

JASPER HILL

The Jasper Hill Project comprises exploration licences E39/2073, E39/2079 and prospecting licence application P39/6267. The project is located approximately 80km southeast of Laverton and covers part of the poorly exposed Merolia Greenstone Belt, a NNW trending belt, up to 20km wide, that can be traced over 110km in a SSE direction from the Burtville Mining Centre. The project area is lightly explored, due to being partly under shallow cover, but is contiguous to the historical producing mines of Lord Byron (160,000oz at 1.0g/t Au) immediately to the south and Fish (87,000oz at 4.1g/t Au), to the east. The basalt, BIF and ferruginous chert sequence hosting the Lord Byron deposit extends into WMG's tenement areas.

Jasper Hill is the Company's primary gold project with ongoing technical and targeting working completed during the quarter ahead of planned field reconnaissance work. The project contains a 3km mineralised gold trend that will be the focus of an initial high-resolution ground magnetic survey.

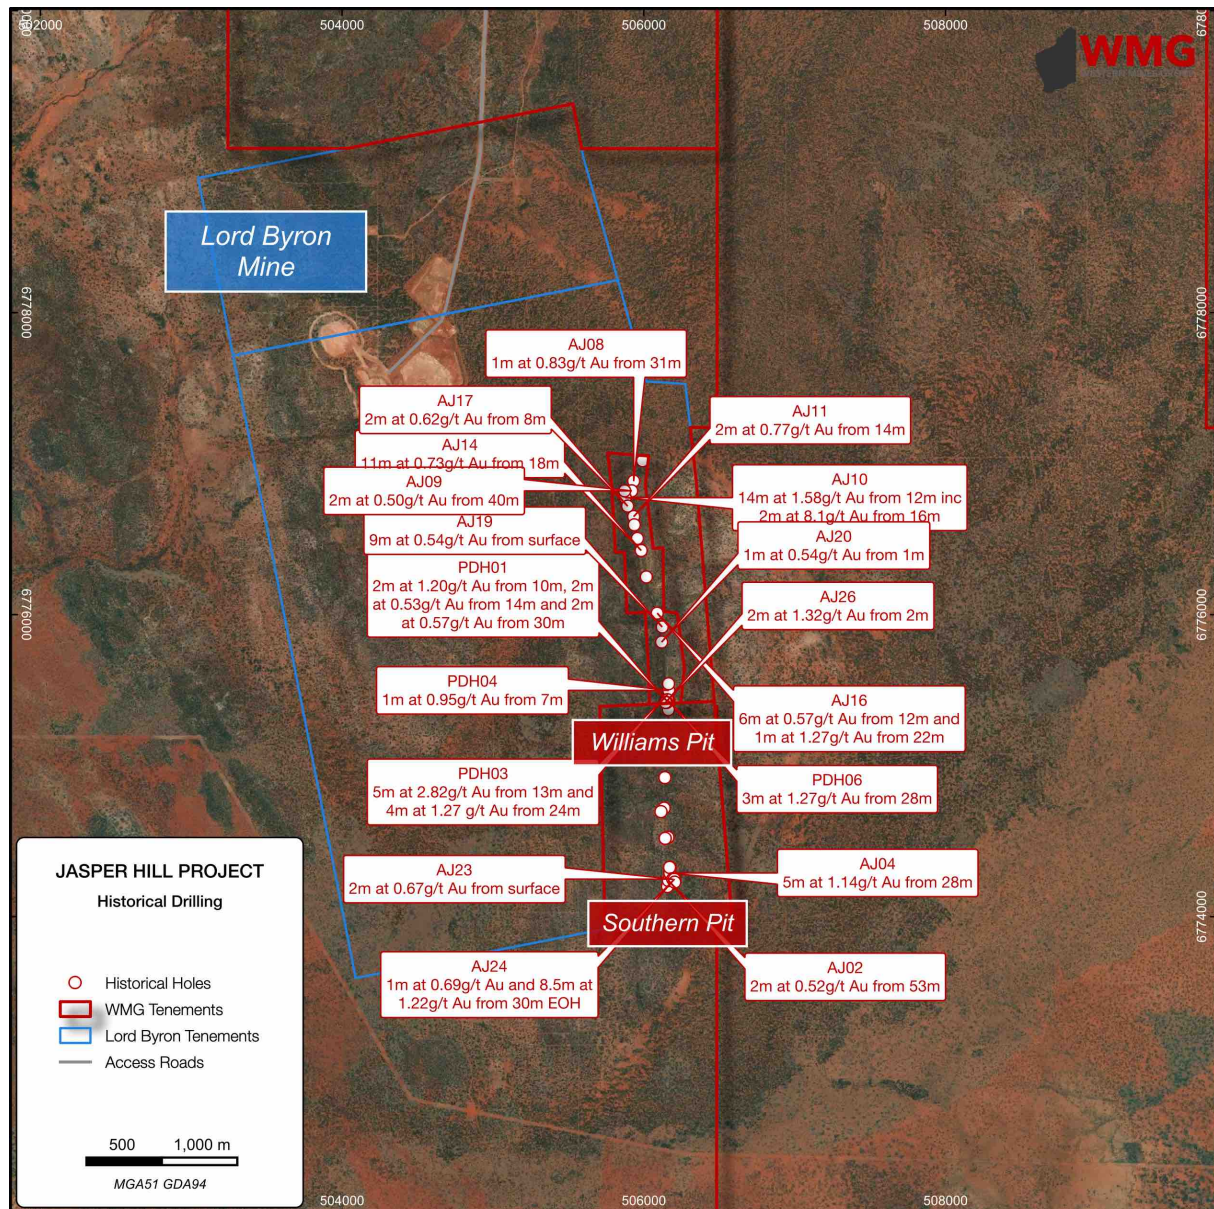

Figure 3: Mineralised trend and significant drill intersections (E39/2073 and P39/6267)

PINYALLING

The Pinyalling Project comprises exploration licence E59/2486 covering 55km². The project is located approximately 25km NW of Paynes Finds and lies at the south-eastern end of the Yalgoo-Singleton Greenstone Belt, within an area known as the Warriedar Fold Belt that comprises a folded sequence of gabbro and dolerite intercalated with basalt, ultramafics, sediments and BIF. The Warriedar Fold Belt hosts a number of historic gold workings at the Pinyalling Mining Centre, 3km north of the tenement area, as well as the Baron Rothschild prospect drilled by Thundelarra Exploration during the 1990s.

During the quarter WMG received the grant of tenement E59/2486 and the Company has commenced initial desktop studies of the region. This area of the Murchison has recently received a significant uptick in exploration interest and attention, with significant news flow from Tempest Mineral's (ASX:TEM) nearby Meleya Project Orion discovery (ASX:TEM, *Meleya Update - Significant Discovery at Orion Target, 28 March 2022*).

Whilst limited previous exploration has been conducted within the tenement area of E59/2486 it was initially pegging following similar logic to Tempest's exploration approach with geological mapping, soil geochemistry and rock chip sampling suggesting the tenement could contain previously unrecognised extensions of the Yalgoo-Singleton Greenstone Belt and Warriedar Fold Belt.

The project also adds lithium potential to the Company's commodity exposure and is located close to Golden State Mining's (ASX:GSM) Payne's Find Lithium Project.

The Company intends to update shareholders on the potential of the project, along with exploration plans once initial desktop work is complete.

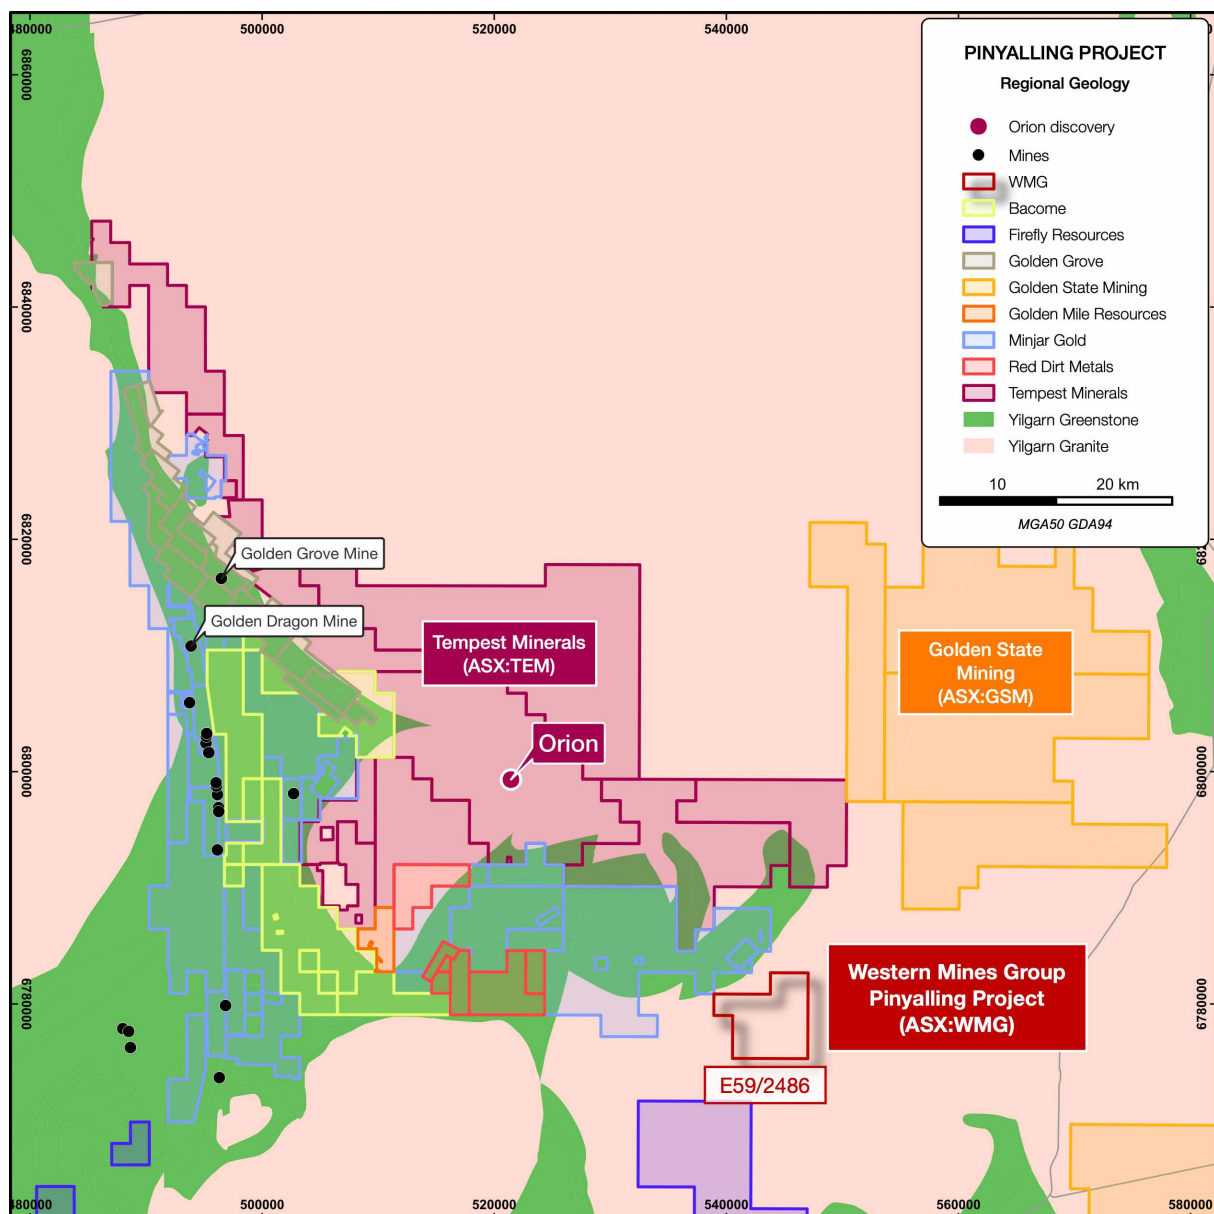

Figure 4: Pinyalling Project Area

PAVAROTTI

The Pavarotti Project comprises exploration licence E77/2478 and exploration licence application E77/2746. The project is located approximately 50km north-northeast of Southern Cross and lies on the western side of the Koolyanobbing Greenstone Belt, a northwest trending sequence of mafic and ultramafic volcanic and intrusive rocks with lesser sediments intercalated with BIF horizons forming prominent ridges. The BIF horizons have been exploited since the 1960s, with several open pit iron ore mines that are currently owned by Mineral Resources (ASX:MIN).

During the quarter the Company successfully negotiated the sale of the iron ore rights at the Pavarotti Project to Mineral Resources Ltd (ASX, *Sale of Pavarotti Project Iron Ore Rights, 4 April 2022*). A cash payment of \$200,000 was received after the quarter end, with a potential royalty payable to WMG of up to 1.25% also part of the sale consideration. The cash payment represents a nice return on the acquisition cost of the project (\$39,891), whilst WMG still maintains 100% of the rights to all other mineral commodities within the tenements and continues to remain focused on the Ni-Cu-PGE potential of the project.

During the previous quarter WMG completed a historical review of the Pavarotti Project (for both iron ore and Ni-Cu-PGE) which highlights the area around Jocks Fury gossan as highly prospective and likely the Company's primary target for nickel sulphide mineralisation (ASX, *Nickel Exploration Update: High Priority Targets Identified, 17 November 2021*).

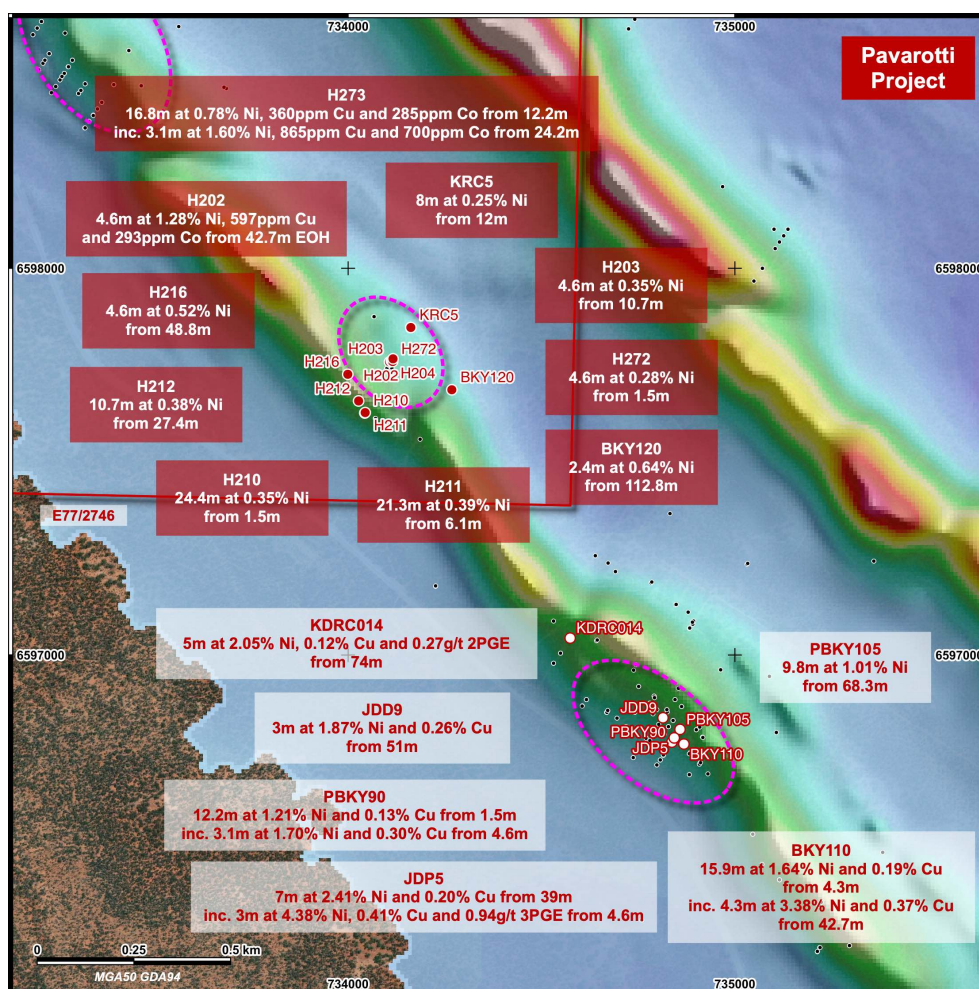

Figure 5: Significant historical drilling intersections around Jocks Fury and Jocks Dream

Historical rock chip samples from Jock's Fury show anomalous results of up to **0.74% Ni, 0.11% Cu and 0.22g/t Pt+Pd over 140m strike**. BHP drilled several shallow holes at Jocks Fury in the late 1960's including **H202 intersecting 4.6m at 1.28% Ni, 597ppm Cu, 293ppm Co** from 42.7m to the end of hole (EOH) and **H273 intersecting 16.8m at 0.78% Ni, 360ppm Cu, 285ppm Co** from 12.2m, including **3.1m at 1.60% Ni, 865ppm Cu, 700ppm Co** from 24.4m. These results do not appear to have been adequately tested at depth and this area was largely overlooked in subsequent exploration by Delta Gold (1985 to 1996) and Western Areas (2000 to 2014).

ROCK OF AGES

The Rock of Ages Project comprises prospecting licence P38/4203 and is located approximately 32km southeast of Laverton. The project lies on the Laverton Greenstone Belt, around 4.5km south of the historical Burtville Mining Centre. The tenement contains the historical Rock of Ages workings, a series of shallow mine workings over approximately 600m strike, associated with quartz veining and ferruginous cherts, within felsic volcanic schists. Historical records indicate 2,074oz Au was mined from the workings between 1902 and 1911 at an average grade of 50g/t Au.

Limited exploration work was done on the project during the quarter. The Company still has plans to follow up on the initial drilling program conducted at the project in September 2021 which identified some encouraging high-grade gold intersections including **RARC005 5m at 3.12g/t Au** from 91m, including **1m at 10.85g/t Au** from 91m and **RARC006 3m at 2.66g/t Au** from 85m, including **1m at 6.82g/t Au** from 86m, and **1m at 1.88g/t Au** from 58m (*Further Assays Confirm High-Grade Gold at Rock of Ages, 21 December 2021*).

Mineralisation remains open at depth and along strike to the north and south and shows evidence for up to 5 stacked gold lodes that appear to correlate well between drill holes. Generally better assay results were seen in fresher, less weathered rock versus the highly weathered upper saprolite. The combination of these three factors (grade, multiple lodes, better results in fresh rock) lends strong support for further drill testing, where broader high-grade zones may hopefully be encountered at depth.

HoleID	Easting (MGA51)	Northing (MGA51)	Max Depth (m)	Azimuth	Dip	From (m)	To (m)	Interval (m)	Grade Au (g/t)
RARC001	465810	6813000	126	90	-60	45 118	48 119	3 1	0.18 0.83
RARC002	465800	6812965	138	90	-60	55 67 87	60 68 88	5 1 1	0.45 0.42 0.13
RARC003	465820	6812930	120	90	-60	56 112 inc. 112	60 114 113	4 2 1	0.41 1.69 2.92

Table 3: Significant intersections for WMG RC 1m samples at Rock of Ages
(significant intersections at 0.1g/t Au cut off, with maximum 1m internal dilution)

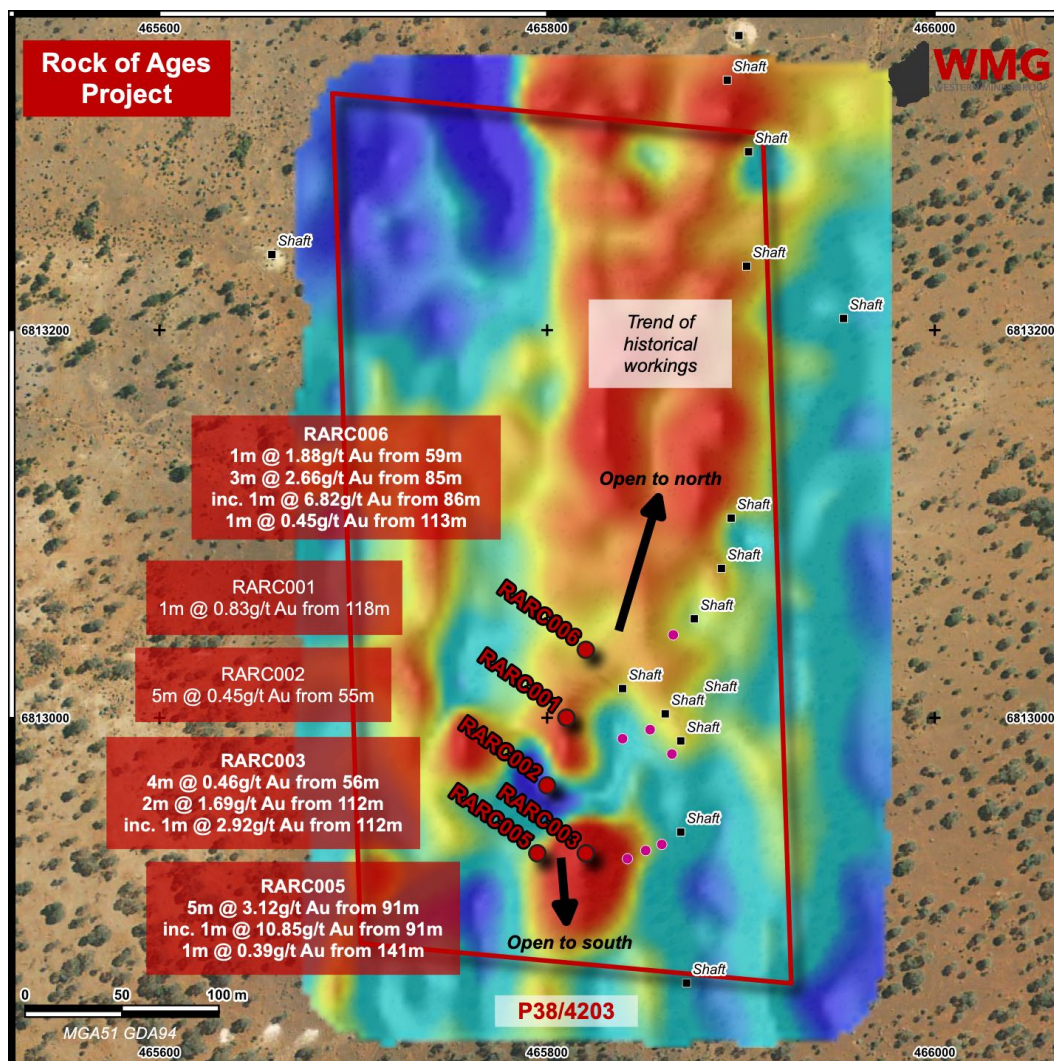

Figure 6: Rock of Ages Ground Magnetism RTP Image

MELITA

The Melita Project comprises exploration licence E40/379, covering an area of approximately 105km². The project is located 20km south-southeast of Leonora and to the north of the Kookynie, Niagara and Orient Well-Butterfly gold mining centres, in the heart of the WA Goldfields. The Kookynie area has seen recent upswing in exploration activity, with WMG's Melita Project surrounded by the likes of Genesis Minerals (ASX:GMD), Saturn Metals (ASX:STN), Azure Minerals (ASX:AZS), KIN Mining (ASX:KIN) and the recently listed Mt Malcolm Mines (ASX:M2M) and Iris Metals (ASX:IR1).

Limited exploration was done on the project during the quarter. The Company continues to review initial soil geochemical and ground magnetic data collected during a series of field campaigns over the last three quarters (ASX, *Major Field Program Commences at Melita*, 11 August 2021; *Completion of Initial Field Program at Melita*, 16 September 2021).

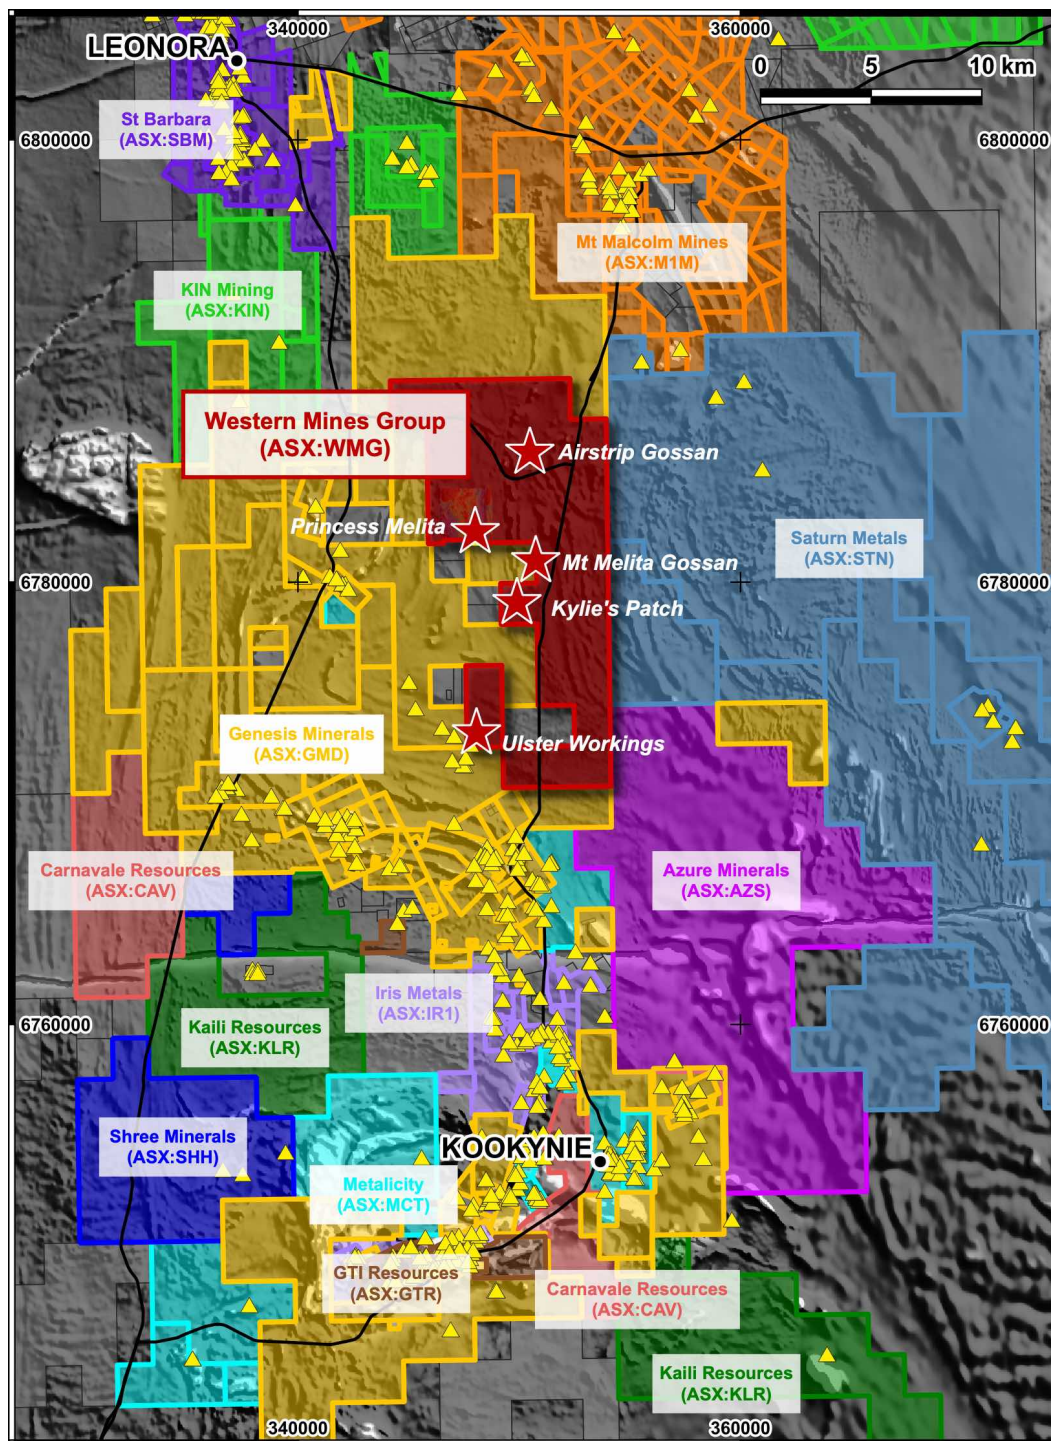

Figure 7: Location of Melita Project

YOUANMI

The Youanmi Project comprises exploration licence E57/1119 and prospecting licence P57/1450. The project is located 70km southwest of Sandstone and lies on the eastern side of the Youanmi Greenstone Belt, along the major Youanmi Shear.

The tenements are just 2km to 7km from the historic Youanmi Gold Mining Centre, which has produced over 600,000oz of gold since its discovery in the late 1800's, currently owned by Rox Resources (ASX:RXL) and Venus Metals (ASX:VMC). The area has seen a resurgence in exploration activity with the recent discovery of the high-grade Penny North (ASX:RMS) and Grace (ASX:RXL) deposits along the Youanmi Shear.

Limited exploration work was done on the project during the quarter.

BROKEN HILL BORE

The Broken Hill Bore Project comprises exploration licence E31/1222 and is located approximately 160km northeast of Kalgoorlie, near Edjudina. The Edjudina region hosts a number of significant gold deposits such as Northern Star's (ASX:NST) Carosue Dam Project, the Edjudina Gold Camp, 9km south of the project and the Patricia workings along strike. The Yarri and Porphyry Gold Camps are located in the Murrin Domain 18km to the west and the Deep South Deposits in the Linden Domain to the north east.

Limited exploration work was done on the project during the quarter.

QUARTERLY ACTIVITY REPORTS BY MINING EXPLORATION ENTITIES

ASX LISTING RULE 5.3

ASX LISTING RULE 5.3.1 - EXPLORATION ACTIVITIES

Exploration and Evaluation during the quarter was \$328,837. Major items of expenditure included the RC drilling program at Rock of Ages, MLEM survey at Mulga Tank, soil sampling programs at Melita and the cash component of the purchase of E39/2073 at Jasper Hill.

ASX LISTING RULE 5.3.2 - MINING PRODUCTION AND DEVELOPMENT ACTIVITIES

No mining production or development activities during the quarter.

ASX LISTING RULE 5.3.3 - TENEMENT TABLE

Tenement	Holder	Status	Grant (Application)	Expiry	Area	Interest
E31/1222	Western Mines Group Ltd	Granted	09/09/20	08/09/25	1BL	100%

 Western Mines Group

ABOUT WMG

Western Mines Group Ltd (ASX:WMG) is a mineral exploration company driven by the goal to create significant investment returns for our shareholders through exploration and discovery of high-value gold and nickel sulphide deposits across a portfolio of highly-prospective projects located on major mineral belts of Western Australia.

Our flagship project and current primary focus is the Mulga Tank Ni-Cu-PGE Project, a major dunite intrusive found on the under-explored Minigwal Greenstone Belt. Previous work shows significant evidence for a working sulphide mineral system and is considered highly prospective for Ni-Cu-PGE mineralisation.

The Company's primary gold project is Jasper Hill, where WMG has strategically consolidated a 3km mineralised gold trend with walk-up drill targets. WMG has a diversified portfolio of other projects including Melita (Au, Cu-Pb-Zn), midway between Kookynie and Leonora in the heart of the WA Goldfields; Youanmi (Au), Pavarotti (Ni-Cu-PGE), Rock of Ages (Au), Broken Hill Bore (Au) and Pinyalling (Au, Cu, Li).

COMPETENT PERSONS STATEMENT

The information in this announcement that relates to Exploration Results and other technical information complies with the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (JORC Code) and has been compiled and assessed under the supervision of Dr Caedmon Marriott, Managing Director of Western Mines Group Ltd. Caedmon is a Member of the Australian Institute of Geoscientists and a Member of the Australasian Institute of Mining and Metallurgy. He has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the JORC Code. Caedmon consents to the inclusion in this announcement of the matters based on his information in the form and context in which it appears.

DISCLAIMER

Some of the statements appearing in this announcement may be in the nature of forward looking statements. You should be aware that such statements are only predictions and are subject to inherent risks and uncertainties. Those risks and uncertainties include factors and risks specific to the industries in which WMG operates and proposes to operate as well as general economic conditions, prevailing exchange rates and interest rates and conditions in the financial markets, among other things. Actual events or results may differ materially from the events or results expressed or implied in any forward looking statement. No forward looking statement is a guarantee or representation as to future performance or any other future matters, which will be influenced by a number of factors and subject to various uncertainties and contingencies, many of which will be outside WMG's control.

WMG does not undertake any obligation to update publicly or release any revisions to these forward looking statements to reflect events or circumstances after today's date or to reflect the occurrence of unanticipated events. No representation or warranty, express or implied, is made as to the fairness, accuracy, completeness or correctness of the information, opinions or conclusions contained in this announcement. To the maximum extent permitted by law, none of WMG, its Directors, employees, advisors or agents, nor any other person, accepts any liability for any loss arising from the use of the information contained in this announcement. You are cautioned not to place undue reliance on any forward looking statement. The forward looking statements in this announcement reflect views held only as at the date of this announcement.
