ASX Announcement

Munni Munni PGE Project – Drilling Update

Highlights

- RC drilling has commenced at the Artemis Resources 70%-owned (Platina Resources 30% ASX:PGM) Munni Munni Platinum Group Element Project, located ~20 km from the Company's 100%-owned Radio Hill Plant.
- 10 RC holes for ~2,450m are planned with the programme expected to be completed by the end of April.
- Drilling is designed to infill the current RC drill spacing in the main resource to a nominal 50m spacing to demonstrate continuity and consistency of grades of this historically significant Western Australian Pt/Pd/Au resource.
- Artemis and Platina Resources continue to evaluate together a range of potential avenues to monetise their interests in Munni Munni.

Artemis Resources Limited ("Artemis" or "the Company") (ASX:ARV, Frankfurt: ATY, US OTCQB: ARTTF) is pleased to provide the above update on mineral exploration activities at its 70%-owned Munni Munni Project located in the West Pilbara region of Western Australia.

About Artemis Resources

Artemis Resources (ASX: ARV; FRA: ATY; US: ARTTF) is a Perth-based exploration and development company, led by an experienced team that has a singular focus on delivering shareholder value from its Pilbara gold projects – the Greater Carlow Gold Project in the West Pilbara and the Paterson Central exploration project in the East Pilbara.
