

## June 2023 Quarterly Activities Report

### Paradox Lithium Project, Utah, USA

- Anson has expanded its flagship Paradox Lithium Project in Utah via the strategic addition of 586 claims that abut the north-western edge of the project area.
- Worley Group Inc. was appointed and has commenced the Front End Engineering and Design Study for the proposed lithium carbonate processing plant.
- Post the June quarter, Anson to purchase a lithium brine project from Legacy Lithium Corp. in the Paradox Basin. The proposed strategic acquisition will result in the Paradox Lithium Project becoming one contiguous mineralised block with an 8% increase in land area, to a total of 231.35 km<sup>2</sup>.

### Green River Lithium Project, Utah, USA

- Letter of Intent signed for strategic acquisition of 140.39 acres (0.568 km<sup>2</sup>) as the site for the Green River Lithium Project's proposed future mineral extraction and processing plant. The proposed agreement includes water rights, as well as the oil and gas and mineral rights underlying the new landholding.
- The site also provides easy access to the national rail network, interstate road system and gas and power infrastructure, plus access to the Green River.
- Anson is undertaking a Geotechnical Engineering Study, consisting of core drilling and shallow trenching plus geophysical surveys, as part of due diligence for the proposed acquisition.

### Corporate

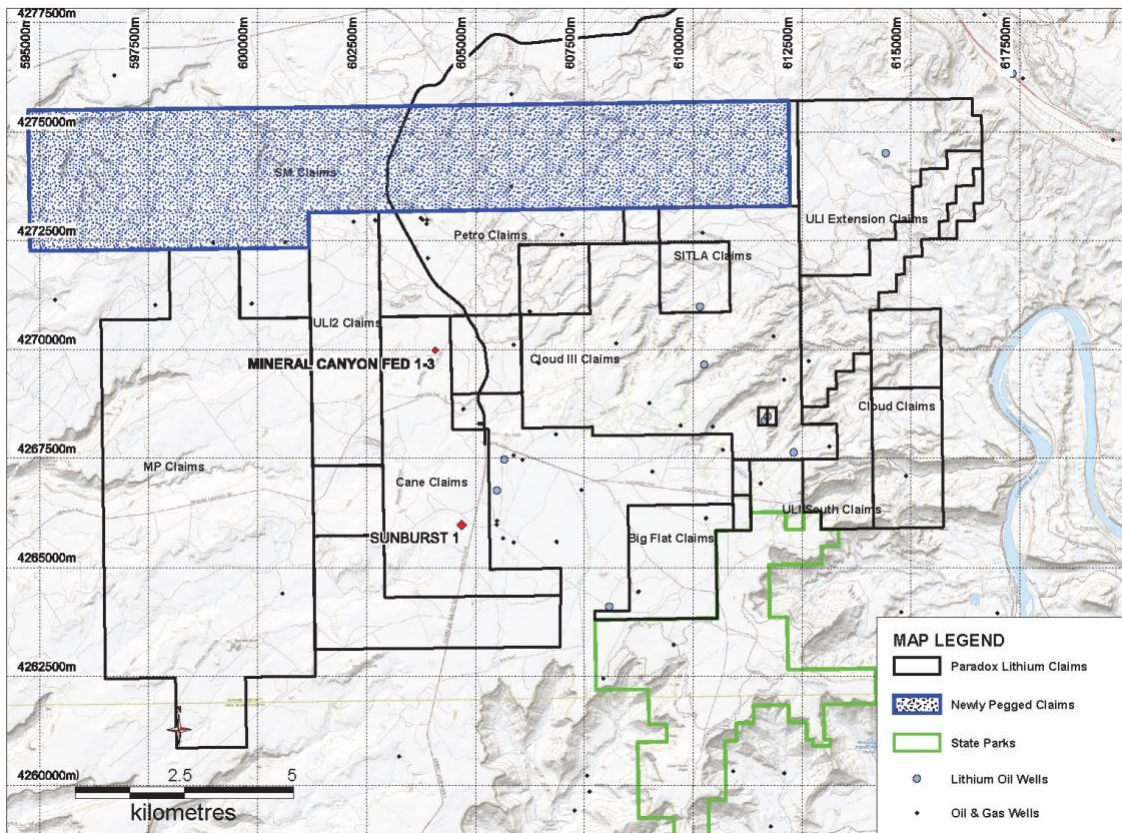

- 41,482,012 ordinary shares were issued following conversion of listed options ASNOC and ASNOD. Total funds raised from the exercise of options was \$1.7 million.
- Strong balance sheet with \$38.6 million cash on hand at the end of the quarter.

Diversified minerals development company Anson Resources Limited (ASX: ASN) (Anson, the Company) is pleased to provide the following update on its activities for the period ended 30 June 2023.

Anson has a portfolio of minerals projects in demand-driven commodities, led by its core asset, the Paradox Lithium Project (Project) in Utah, USA. It is focused on developing the Project into a significant lithium producing operation.

## Paradox Lithium Project, Utah

During the quarter, Anson’s wholly owned Utah based subsidiary, A1 Lithium Inc., has staked an additional 586 placer claims immediately adjacent to the north-western extent of the Paradox Project area, as shown in Figure 1 below (ASX announcement, 10 May 2023).

**Figure 1: Plan showing the new claims pegged in relation to the State Parks to the south.**

The new claims about the Petro, Cloud III and MP claims. The presence of lithium-rich supersaturated brines has been confirmed in the area. The expanded Project area is planned to be included in Anson’s Western Strategy Mineral Resource drilling program. It is anticipated that the new claims may increase the existing Indicated and Inferred Mineral Resource estimates at Paradox upon the successful re-entering of historical wells and the positive assaying and flow testing of brines.

### Acquisition of Green Energy Lithium Project

Post the end of the quarter, Anson announced that it has entered into an agreement to purchase the strategically located Green Energy Lithium Project, from Legacy Lithium Corp (Legacy) (ASX announcement, 18 July 2023). The acquisition increases the Paradox Lithium Project land holding by 8% to a total of 231.35 km<sup>2</sup>.

The Green Energy Lithium Project comprises 208 placer claims over a total area of 16.85km<sup>2</sup> and is strategically positioned immediately adjacent to the Paradox Lithium Project (Figure 2).

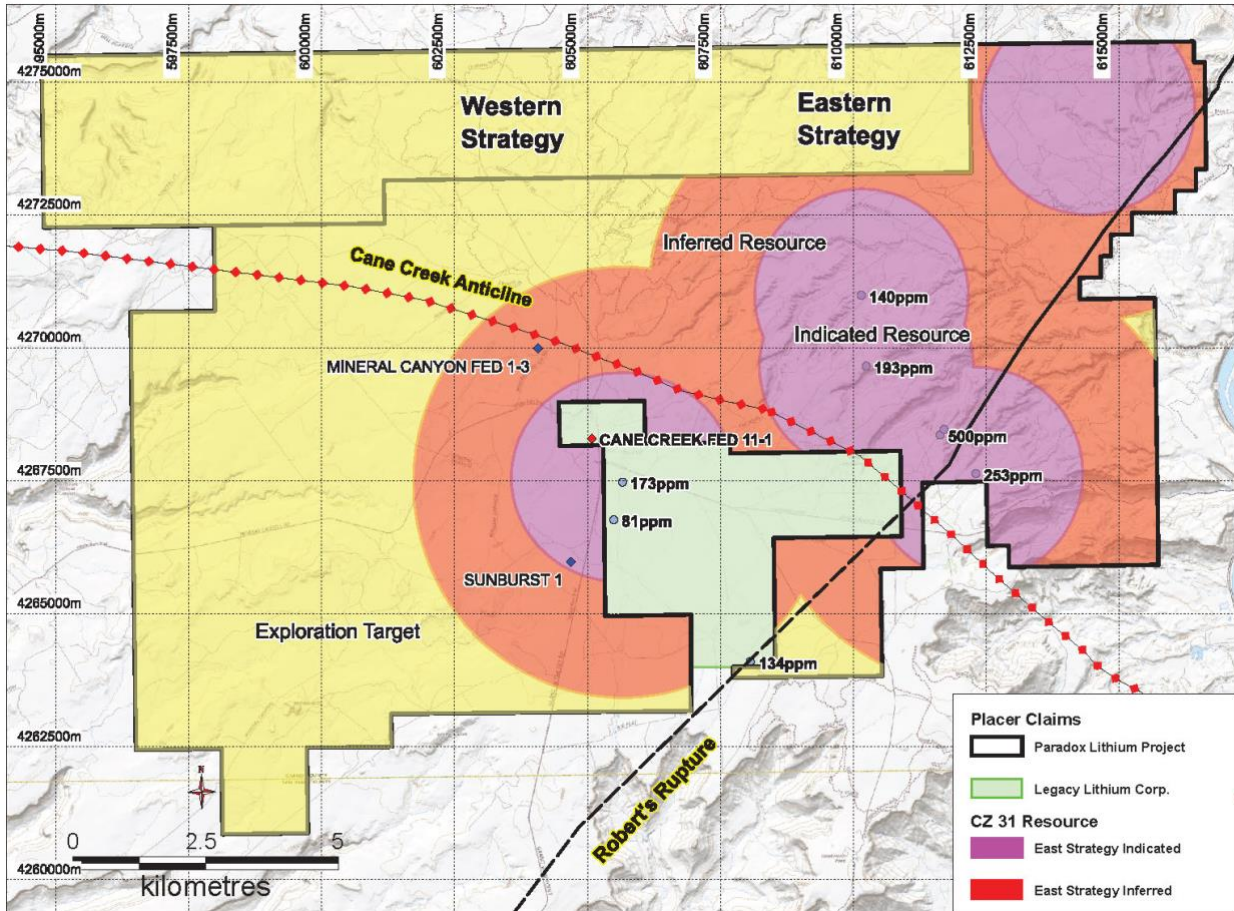

Figure 2: Plan showing the location of Green Energy Lithium Project claims.

The increase in the Paradox project area is expected to result in an increase in the Exploration Target of 14%, see Table 1.

Exploration Target	Density	Brine (Mt)	Li (ppm)	Li <sub>2</sub> CO <sub>3</sub> ('000t) <sup>1</sup>	Br (ppm)	Br ('000t)
MIN	1.27	310	108	1,294	2,000	4,811
MAX	1.27	350	200	3,096	3,000	8,734

Table 1: Exploration Target estimation for the combined Paradox Lithium Project and Legacy Lithium claims.

*The Exploration Target figure is conceptual in nature as there has been insufficient exploration undertaken on the project to define a mineral resource for the Clastic Zones and Mississippian units. It is uncertain that future exploration will result in a mineral resource.*

The Green Energy Lithium Project has strong potential to deliver an increase in the existing JORC Mineral Resource estimate at Paradox without the need for further drilling. The Project area contains 18 historic oil and gas wells – and three of these wells have recorded lithium values: 173ppm in Clastic Zone 31, 134ppm in Clastic 19 and 81ppm in the Mississippi Units.

The data from the historic wells will contribute to a Mineral Resource upgrade at the consolidated Paradox Lithium Project and would be included in the development of a numerical Hydrogeological Flow Model for the Paradox Lithium Project.

Post the end of the quarter, Anson completed a 3D Geological model covering the region hosting both its Paradox and Green River Lithium Projects (ASX announcement, 19 July 2023).

The model (Figure 3) covers the region hosting both the Paradox and Green River Lithium Projects and is currently being imported into a numerical Hydrogeological Flow Model that will be used in the conversion of the JORC Inferred Resources into Indicated category and from there into JORC Ore Reserves.

**Figure 3: Snapshot of the Paradox Lithium Project 3D Geological Model showing two salt domes (purple peaks) interpreted to have directed the brine flow towards the Project area.**

The completion of the 3D Geological model represents an important step in Anson's JORC Resources and JORC Ore Reserves development strategy. Converting the lithium JORC Resources into JORC Ore Reserves is essential for obtaining project funding for the Company's Paradox Basin lithium projects.

### **Project Summary:**

The Paradox Lithium Project consists of 2,434 placer claims, 87 that are subject to an earn-in agreement<sup>1</sup> and the remainder are 100% owned by Anson<sup>2</sup> in Utah, USA. In addition, three state Potash and Mineral leases and two state industrial leases are included in the Project area<sup>1</sup>.

## **Green River Lithium Project**

Anson has signed a letter of intent (LOI) to enter into a Purchase and Sale Agreement for the strategic acquisition of 0.568km<sup>2</sup> of privately owned, industrial use land at its Green River Lithium Project in the Paradox Basin, in south-eastern Utah, USA (ASX announcement, 23 May 2023).

Anson plans to utilise the new site as the location for the future lithium extraction and production facility for its proposed lithium producing operation at the Green River Project. The proposed agreement also includes water rights. These water rights will be added to those that have already been subleased from the Green River Companies LLC and confirmed by the Wayne County Water Conservancy Board.

The new site also provides access to the national rail network, interstate road system, as well as gas and power infrastructure, and access to the Green River. It is also situated in close proximity to the town of Green River, providing easy access to other supporting infrastructure and a potential workforce.

## **Bull Nickel-Copper-PGE Project**

The Bull Project is located only 35km from Perth abutting Chalice Gold Mines Limited's (Chalice) (ASX: CHN) tenements and is 20km south-west along strike of Chalice's high-grade Julimar Ni- Cu-PGE discovery. Anson also pegged an additional tenement that abuts the Bull Project area to the south, ELA70/5619.

During the quarter negotiations continued with the 3 landowners in which exploration programs are planned. These negotiations are in the final stages of completion. Priority drill targets have been defined based on geophysical surveys and geological mapping. The stage 1 drilling program consists of 18 holes focusing on priority areas 1, 2 and 3, and will be drilled to a depth of 200m from west to east at a 60<sup>0</sup> angle to maximize potential intersection of the targeted anomalous ultramafic units, See Figure 4.

<sup>1</sup> Anson commenced with a 10% interest in these 87 claims which increased to 50% from the work done, and may be subject to finalisation under the terms of the agreement to earn-into the ULI Project

<sup>2</sup> 65 claims owned by Anson may be subject to area of interest provisions of the agreement to earn-into the ULI Project.

**Figure 4: Drone Mag RTP image at the Bull Project showing proposed drillhole locations.**

The magnetic image interpretation in Figure 7 shows the distinct internal character of the magnetic anomaly at The Bull. Rather than a homogenous ovoid-shaped magnetic anomaly, the anomaly appears to be comprised of a series of magnetic high lenses and potential structural offsets.

## Yellow Cat Vanadium / Uranium Project

The Yellow Cat project is located 30 km north of Moab, in the Thompson District, Grand County Utah. There are two separate areas: the Yellow Cat and the Yellow Cat West claims.

The Yellow Cat Project is considered prospective for the development of both uranium and vanadium due to the high historic grade mineralisation present on the claims. The project is located in a region that is increasingly sought-after by companies exploring for uranium.

High grade assay values of up to 87,600ppm uranium (U) (10.33% U<sub>3</sub>O<sub>8</sub>) and 143,500ppm vanadium (V) (25.61% V<sub>2</sub>O<sub>5</sub>) were reported. A summary of the results of the elemental values and the more common metal oxides are shown in Table 2.

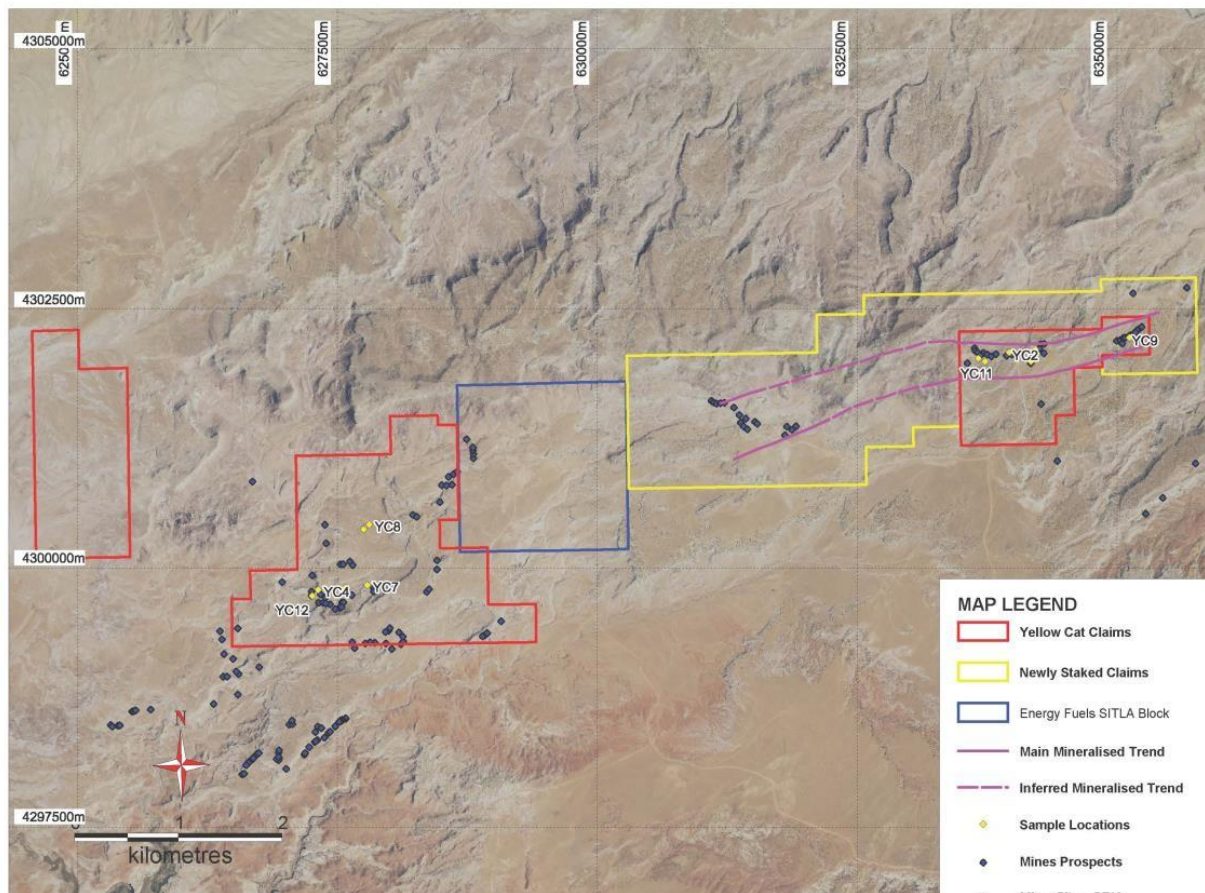

Anson is sourcing quotes from contractors to carry out surveys required to get approvals for exploration drilling programs during the summer. Only a small diamond drill rig would be required minimising ground disturbance which will allow an exploration program consisting of approximately 25 drill holes to be approved. The aim of the exploration programs is to confirm existing drilling results and to extend the known mineralisation along strike and down dip, see Figure 5.

## The Ajana Project

The Ajana Project is located in Northampton, Western Australia, a proven and established mining province for zinc, lead and silver. The Project is adjacent to the North West Coastal Highway and 130km north of Geraldton. Historical exploration in the area has concentrated on the search for lead and zinc deposits. The prospective ground on the tenements E66/89 and E66/94 is dominated by the Northampton Metamorphic Complex.

The Ajana Project contains several historic copper, lead and silver producing mines that date back to 1850.

The Mary Springs tenement contains a JORC 2012 Mineral Resource estimate which is summarised in Table 3. The global Indicated and Inferred Resource estimate is 390,000 tonnes grading at 6.5% Pb. Zones of Pb-Zn-Cu-Ag rich mineralisation have been intersected in recent drilling but were not included in modelling the resource. Further drilling may enable the zinc, copper and silver bearing zones to be modelled as part of a future resource.

Category	Indicated			Inferred			Total		
	BCM	Tonnes	% Pb	BCM	Tonnes	% Pb	BCM	Tonnes	% Pb
+ 1% Pb	80,000	240,000	6.6	50,000	150,000	6.2	130,000	390,000	6.5

**Table 3: Mary Springs Mineral Resource Estimate, JORC 2012.**

Anson plans to drill three prospects at Ajana in the next quarter. These prospects have POW's already approved by the Department of Mines, Industry Regulation and Safety (DMIRS). Heritage surveys have been completed, which included archaeological and ethnographical work area clearance, at the proposed sites for the exploration programs to be carried out, see Figure 6. The survey was completed over the Surprise, Ethel Maud and Block 1 prospect areas.

**Figure 6: Plan showing the areas approved for exploration in the submitted POW's and cleared in the heritage survey (green) and local prospect locations.**

The proposed three exploration programs will consist of reverse circulation (RC) drilling under and along strike of existing pits and mine shafts in the areas approved for exploration in the POW's.

Anson is planning a 1,990m reverse circulation drilling program at the Ajana Project and will appoint a drilling company to carry out the program in the next quarter. A local contractor will be used for the clearance work to prepare access and drill sites prior to the drilling programs commencing.

Most of the known prospects at Ajana have been identified along the north-east trending dolerite dykes and considered to be “in echelon” type (parallel formation) deposits, similar to the Mary Springs mine. However, historic small mining operations also identified a number of prospects which were located between these dykes that were crosscut by faults which may increase the grade of mineralisation as has occurred with the zinc at Ethel Maude, see Table 4.

Target Area	Mine	Grades				Comments
		Zn (%)	Pb(%)	Cu (%)	Ag (g/t)	
Geraldine	Ethel Maude*	43.0	11.3	NA	6.5	Samples from shafts

## Hooley Well Cobalt-Nickel Laterite Project

The Hooley Well Nickel-Cobalt Laterite Project is located 800km north of Perth and 300km north-east of Geraldton in Western Australia consisting of three tenements E9/2218, E9/2219 and E9/2462. Tenements E9/2218 and E9/2219 contain historical shallow drilling which has intersected nickel and cobalt laterites. There are also possible primary nickel sulphides (identified by IP response) at depth.

During the quarter an Extension of Term was applied for E09/2219 and was approved by the Department of Mines, Industry Regulation and Safety (DMIRS).

Anson had previously flown a drone aeromagnetic survey over the E09/2218 and 2219 tenements on a line spacing of 50m and at a height of 25m. With the completion of the processing of the aeromagnetic data obtained from the drone surveys, further interpretation of the data has begun.

Interpretation at 1:20,000 is being completed over the surveyed area and interrogated at a closer scale of approximately 1:10,000. A comprehensive interpretation of the aeromagnetic data includes all the relevant geoscientific information, allowing for the mapping of lithologies and structure.

This work involves:

- Interpretation of:
  - Domains of magnetic and radiometric anomalism,
  - Delineation of magnetic and radiometric trends,
  - Interpretation and classification of structures (lineaments, faults and folds), and
  - Delineation and interpretation of lithology and stratigraphic relationships,

Once the processing of the aeromagnetic data is completed, processing of historical radiometric surveys will be carried out to target Rare Earth Element (REE) mineralisation due to a REE Resource being proved up east of the Hooley Well tenements.

REE mineralisation has also been recorded in drill holes that abut the western side of the Hooley Well tenements. The historical ternary imagery over Hooley Well is similar to that of Krakatoa's mineral resource.

On completion of the aeromagnetic and radiometric interpretations, Anson plans to submit several POW applications to carry out both air-core (AC) and reverse circulation (RC) drilling programs across the high priority targets identified.
