

CAZALY RESOURCES LIMITED

INCREASES LAND POSITION AT THE KAOKO KOBALT PROJECT, NAMIBIA

- **Completes acquisition of Kaoko Kobalt project in the Kunene Cobalt Province, northern Namibia**
- **Land holding greatly increased to ~1,410km² through two new, first priority tenement applications**
- **Extends coverage of Co-Cu prospective ‘DOF’ horizon to over 80km**
- **Hosts the probable continuation of Celsius Resources’ *Opuwo* cobalt –copper bearing ‘DOF’ horizon**
- **EPL7097 application also covers possible extensions of the 20km+ long Kamwe Cu-Co anomaly – potential DOF Cu-Co source?**
- **Local team set up, field work to begin shortly**

Cazaly Resources Limited (**ASX: CAZ**, “Cazaly” or “the Company”) is pleased to announce that after its decision to proceed with the Kaoko Kobalt project located in northern Namibia it has completed the formal acquisition of holding company Kunene North Pty Ltd and now has the right to earn a 95% interest in the project. The project is primarily prospective for copper-cobalt mineralisation. Details were previously announced to the ASX on the 26th March, 2018.

The Company has recently extended its potential land position in the region through the application of two new Exploration Prospecting Licences, EPL7096 and 7097. These are first in time applications and are contiguous with the existing granted EPL6667 (see figure 2).

The Kaoko Project lies in northern Namibia approximately 800km by road from the capital of Windhoek and approximately 750km from port of Walvis Bay (Figure 1).

The region has excellent infrastructure and initially comprised exploration licence EPL6667, which was granted in February 2018. If granted, the two new applications will greatly increase the Company's land position in the region from ~970km² to ~1,410km² and will **extend coverage of the Co-Cu prospective 'DOF' (Dolomite Ore Formation) unit to over 80km.**

The Kaoko Kobalt project is situated immediately to the north of, and abuts, Celsius Resources Limited's ("Celsius") (ASX:CLA) *Opuwo Cobalt* project. Celsius recently announced a maiden resource for the project of 112Mt @ 0.11% Co & 0.41% Cu (CLA ASX release 16 April, 2018). The Kaoko project has only had cursory exploration in the past, the results of which highlighted widespread base metal mineralisation. Aside from having the potential of ~80km of prospective DOF a previous regional 1km by 1km soils programme delineated a 20km by 5km area of subdued magnetics coincident with anomalous Cu-Co-Zn-Mn at the *Kamwe* prospect.

Further details are outlined in the Company's presentation and 26th March ASX

announcement which are available on the Company's website.

NEXT STEPS

Cazaly has now assembled a team of key in-country personnel and is planning its initial exploration work at Kaoko. This will involve negotiating land access and reconnaissance mapping and sampling of the DOF horizon and the Kamwe target. The company is also investigating an opportunity to fly a regional electromagnetic survey over a significant area of the project to fast track targeting areas for drilling.
