## Legend Developing towards New Algeria Lode, Gidgee Gold Project

Legend Mining is commencing underground development towards another new ore body, Algeria lode, at the Swan Bitter Underground Gold Mine, Gidgee Gold Project located 90 km north of Sandstone in WA.

The Algeria lode is only 40 metres west of existing underground workings, on a parallel mineralised system. It is located just above the Tunisia lode, which has provided the majority of the mine's ore for the past 14 months.

Initial development will include driving 120 metres westward to the top of the lode, from the Swan Bitter decline near the portal. Concurrently, development will advance towards the bottom of the lode. It is expected that it will take approximately 3 months to fully develop the lode and commence production stoping.

Recent underground diamond drilling by Legend (Table 1) has shown the Algeria lode to be more extensive than recognised by the previous owners (Figure 1). It is now interpreted to have a northerly plunge rather than the southerly plunge as initially interpreted. This reinterpretation has opened the possibility of additional potential in the upper parts of the mine.

**Table 1: Significant Underground Diamond Drill Results – Algeria Lode**

Hole	East (mine grid)	North (mine grid)	RL (m)	Azimuth /Dip	Hole Length	From (m)	Intercept Length	True Width (est)	Grade Au (uncut)
GUD1065	20170.3	49792.1	318.8	279/+17	159.8m	122.20	5.15m	2.50m	5.25g/t
					includes	122.20	0.53m	0.25m	33.73g/t
GUD1069	20170.2	49792.1	319.1	267/+25	156.4m	119.50	4.20m	2.10m	47.24g/t
					includes	120.65	0.35m	0.17m	271.76g/t
						135.00	2.25m	1.10m	8.32g/t
GUD1070	20170.4	49792.2	318.8	280/+20	162.7m	103.24	5.36m	2.70m	5.74g/t
					includes	106.50	2.10m	1.00m	9.61g/t
GUD1090	20141.6	49905.2	372.9	229/-2	149.4m	116.10	5.10m	2.60m	9.00g/t
					includes	116.10	1.77m	0.90m	22.08g/t
GUD1094	20141.6	49905.2	372.9	223/-2	164.0m	111.20	0.80m	0.40m	16.21g/t
GUD1105	20149.1	49848.6	320.1	235/+28	145.2m	116.00	2.00m	1.00m	21.56g/t
						129.40	1.90m	0.95m	30.12g/t
					includes	129.40	0.70m	0.35m	75.14g/t

Cut-off grade of 2.0g/t Au. Maximum internal dilution of 2.2m. Assay method: 200g Leachwell (25g Aqua Regia repeats).

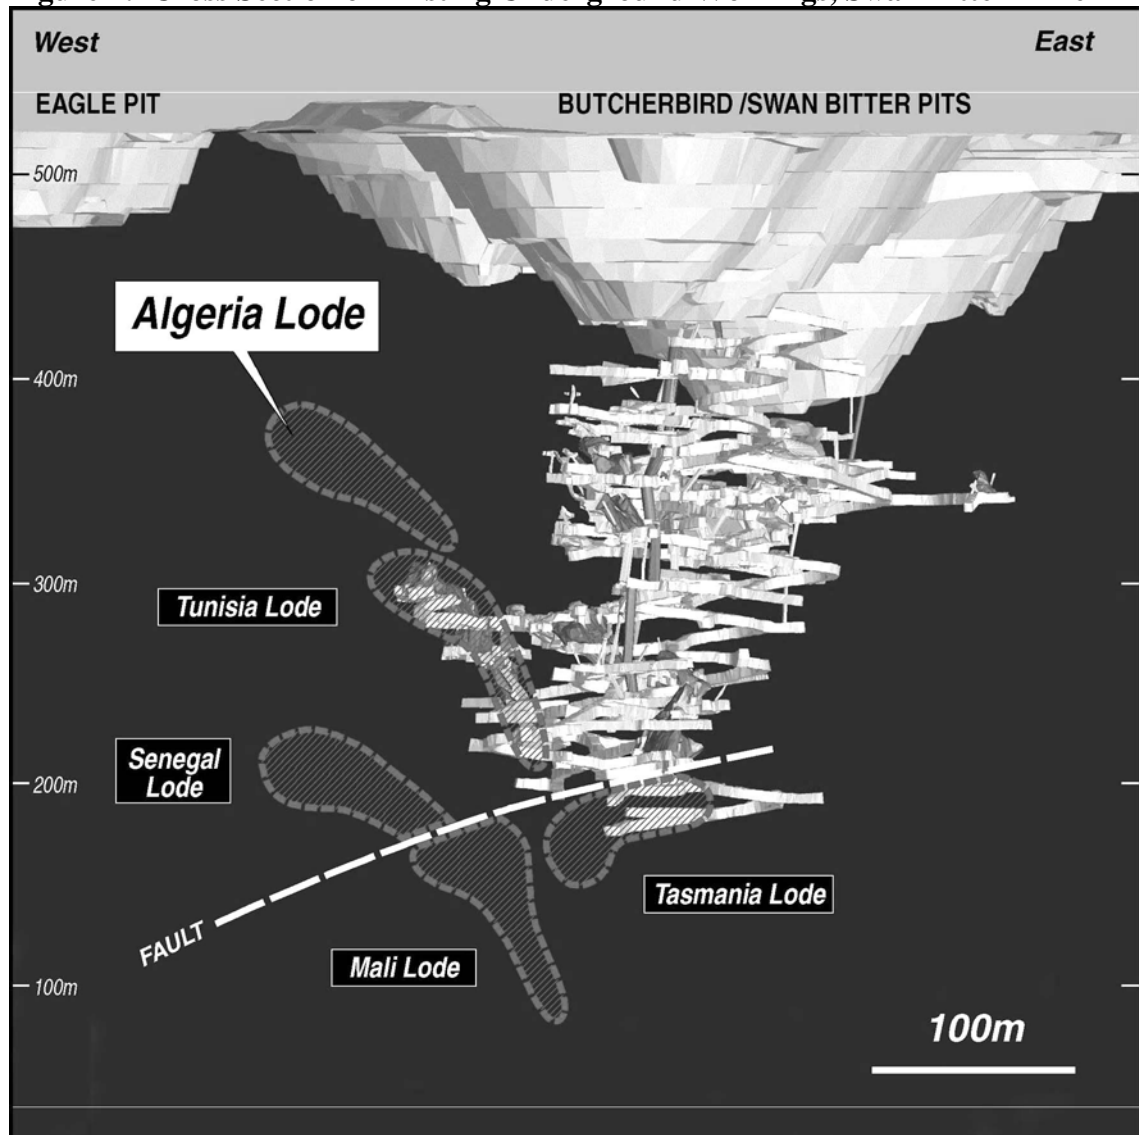

Legend recently announced the discovery of the Mali and Senegal lodes, and has significantly increased resources at the 60,000oz per year Gidgee gold mine to 586,650 ounces.

Drilling is continuing, to determine the full extent of the currently defined lodes and possible extensions along the 4.5 kilometre Swan Bitter-Kingfisher mineralised trend.

Total gold production to date from the Gidgee project is in excess of 1.2 million ounces.

Murray McDonald  
Director
