

Aircore Drilling Commences at Rockford Project

Legend Mining Limited (“Legend”) is pleased to announce that aircore drilling commenced over the weekend at its Rockford Project in the Fraser Range of Western Australia.

The regional drill programme will comprise 80 holes for ~5,000m and focus on eight features selected from detailed aeromagnetic/gravity datasets and EM surveys. The aim of the drilling is to provide information on the regolith profile, basement lithologies and the lithochemical signature of the basement rocks. The programme is estimated to take 3-4 weeks to complete with assay results expected 3-4 weeks later.

The geological and assay results from the aircore drilling, in conjunction with the current moving loop electromagnetic surveys (see ASX announcement 15 August 2016) are expected to generate the next iteration of RC/diamond drill targets.
