- Production of first CannEpiTM batch remains on track for completion in March, with grant of full GMP Certification of MXC's European laboratory and compounding facility expected soon after this final compliance stage
- All extraction equipment and systems now fully installed at MXC's European Facility, for commencement of second phase of GMP certification.
- RMIT collaboration delivers significant progress in developing the Library of Cannabinoids over the past 6 months
- Partnership discussions commenced between RMIT, MXC and leading Israeli research universities to identify and potentially deliver new medicinal cannabis technologies to market
- Commencement of first 2018 crop at MXC's Czech Republic glasshouse facility using new generation cannabis genetics
- Extraction of cannabinoids from 2017 Czech botanical production to be completed in Prague during March, to be used in manufacture of new MGC products
- Potential strategic investment and JV opportunities for a MXC operation identified with established licensed producers in Australia and North America, providing opportunity to fast track the Company's operations in both regions to complement its European pharma infrastructure and product development

MGC Pharmaceuticals Ltd (ASX: MXC or "the Company") is pleased to provide the following operational update as it continues to make strong progress across its MGC Pharma, MGC Botanic and MGC Derma divisions.

The Company's core strategic focus remains to build the MGC Pharma business into a leading global bio-Pharma operation, and it has made further strong progress over the past few months. Final GMP certification for the laboratory and compounding facility is expected shortly after the Company's first CannEpiTM batch is completed and inspected, which remains on track for March.

Additionally, the executive management team has been focused on advancing numerous commercial and strategic discussions with key partners, to fast track the Company's licensed producer status in Australia and North America, to complement the Company's existing facilities and operations in Europe.

The management team have delivered material progress across the Pharma, Derma and Botanic Divisions over the past few quarters, and a summary for each of the three areas is outlined below.

MGC Pharma

Production of first CannEpiTM batch and GMP certification on track for March

In January 2018, the Company was granted an interim Good Manufacturing Practice (GMP) licence for its European production and manufacturing facility, significantly progressing the Company towards the completion of its full GMP licence.

Under this interim certification, the imminent production of MXC's first batch of CannEpiTM and will undergo analysis and inspection as a final step before full GMP certification is granted.

The Company remains on track to complete the manufacture of its first batch of CannEpiTM in March and expects to receive the final GMP certification for its European laboratory and compounding facility shortly thereafter.

Once final GMP certification is received for the laboratory and compounding facility, MXC will focus on the GMP certification process for its European extraction facility. Once both certifications are received, MXC will have a fully-integrated GMP facility for the future extraction, compounding and production of new pharmaceutical grade cannabinoid medicine products.

RMIT University collaboration - material progress on Library of Cannabinoids and new initiatives

The collaboration with RMIT University has made material progress on 3 key project initiatives over the past 6 months, including the strategic Library of Cannabinoids. Currently, PhDs students are working full time on the Library of Cannabinoids, with the repository of information to be used in the further study of medicinal cannabis safety, efficacy and the development of personalised medications. The information will also be used to support real-time doctor and patient monitoring of medicinal cannabis use.

Furthermore, RMIT and MXC have commenced potential strategic partnership discussions with leading Israeli medicinal cannabis research centres and universities, to work together on the Library of Cannabinoids to support global medicinal cannabis clinical studies, with the data to be analysed statistically using complex algorithms. The data will also be used to identify and incubate new innovative technologies in the medical cannabis sector including cutting edge genetics, delivery systems, treatments and new medical products.

In September 2017, MXC submitted its first application to Australia’s Office of Drug Control (ODC) for its medicinal cannabis research cultivation licence for its collaborative research initiative with RMIT University. In recent months, RMIT and MXC have been actively working with the ODC to progress its licence application through the approval process. The Company and RMIT hope an Australian research cultivation licence will be granted in due course, and are actively engaging with the federal licensing body on any further requirements and next steps.

Mabsut Life contract on-track to deliver annualised \$1m revenue

The multi-year contract with Mabsut Life remains on track to deliver annualised revenues of \$1 million with MXC supplying a minimum of 12kg of CBD extract per quarter from MXC’s European extraction facility.

Additionally, Mabsut have recently requested that MXC commence work on new products lines, which are now currently under development at MXC’s leading European research and development facilities.

MGC Botanic

Second year’s crop commenced at MXC’s Czech Republic facility

Following a successful first harvest in 2017 at the Company’s Czech Republic facility, MXC has commenced its second year’s crop, with seedlings already cultivated for the entire 1,100 square meter glasshouse facility, using new cannabis genetics. The Company plans to expand its current facility operations in 2018, potentially up to the full 2,000 square meter capacity during the year. The Czech botanical operation is a key strategic pillar for the Company and ensures it is well placed to meet expected strong future demand from key European emerging markets.

Furthermore, the Company will commence operations in Prague to extract cannabinoids from its 2017 Czech Republic botanical production, for use in the manufacture of new MGC products in March.

MXC first genetics crop completed with University of Ljubljana

The research collaboration with University of Ljubljana, Slovenia continues to progress well, with the crop of cannabis plants grown using MXC genetics now in the middle of flowering stage. Preparations are currently underway for analysis, which will be the next phase in the project, the outcomes of which will be detailed in the next research report, which is released semi-annually.

Discussions underway to establish potential licensed producer joint ventures or strategic partnerships

In recent months, the executive management team have advanced discussions to establish potential strategic joint ventures or partnerships with existing licensed producers. The discussions are focused on establishing new operations in Australia and North America, two new key markets identified by the Company. The execution of strategic partnerships or joint ventures would provide MXC with immediate access to fully licensed medical cannabis facilities in each region, fast tracking the establishment of key botanical operations in both continents. Management continues to progress these discussions and will provide an update to shareholders and further details, should an agreement be reached.

MGC Derma

MGC Derma sales immediately increase following successful Cult Beauty launch

MGC Derma has seen a material increase in month on month sales revenues compared to Q3/Q4 2017 following the successful launch of 15 of MGC Derma's cosmetics products and its Derma Plus skin care range on global online cosmetics store Cult Beauty. The Cult Beauty launch is supported by an exclusive 6-month marketing campaign, and already, is driving a direct increase in sales of MGC Derma's products.

Varm Cosmo Sales Contract Update

As expected, Korean cosmetics manufacturer Varm Cosmo formally launched its CavaLabs brand in February 2018 using their own formulation and products line, based on the most recent advice received by the Company, is soon expected to launch its premium range of CavaLabs Derma products in the coming months utilizing the MGC Derma formulations. The MGC Derma binding sales contract is for the supply of white label cosmetics products, which will be used by Varm Cosmo in its premium CavaLabs Derma premium range. Five of MGC Derma's CBD based cosmetics products will be sold as part of its CavaLabs Derma premium range under the white-label arrangement.

As previously announced in Company updates in 2018, MXC has still not yet received payment of the initial \$1m deposit that was due when the first binding purchase order executed. This directly results from delays in Varm Cosmo's testing process over the last 2 months and the finalisation of its premium product line. Management expects that once Varm Cosmo's testing is completed, MXC expects to then receive Varm Cosmo's final order for its premium product line after which the deposit will be received.

Two additional Derma Plus products to launch

The Company is pleased to confirm that following the successful launch its Derma Plus Herbal Repair Cream, for sensitive and flaking prone skin in the December quarter, it will launch two additional products from the Derma Plus range.

MXC's Derma Plus range utilises proprietary cannabidiol (CBD) compounds and comprises three clinically tested products, which have been shown to deliver strong improvements across a range of skin conditions. Its CBD Herbal Replenish Cream for red and sensitive skin, targeting sufferers of eczema and seborrheic dermatitis will launch in March, followed by CBD Herbal Balm, designed for oily and acne prone skin in July 2018. Both products will be made available on MGC Derma's website www.mgnderma.com.

New Derma Product Catalogue to be launched in March

New MGC Derma marketing materials will be released in March, to support ongoing sales and marketing initiatives of the MGC Derma product range.

Roby Zomer, Co-founder and CEO, MGC Pharmaceuticals commented:

“It has been a very busy few months, with the management team focused on a number of strategic discussions that will provide a huge opportunity to fast track our Pharma operations in a number of geographies.”

“We’ve made strong progress across all three divisions, and are fast approaching a huge milestone for our Pharma division, with GMP certification imminent, following the first production of CannEpiTM which is on track for March.”
