

## NMR on track for record monthly gold outturn following latest Blackjack gold pour

### Highlights:

- NMR on track to achieve its highest monthly gold production at its Blackjack Operations in northern Queensland since recommissioning last year, targeting +800oz gold outturn during June 2026.
- Gold pour completed on 21 June 2026 produced 406.4oz of doré in three bars (BJM068–070), comprising 276.9oz from two elution bars and 129.6oz from one gravity bar.
- Official refinery results from NMR's 14 June 2026 gold pour (BJM065–067) returned 194.4oz gold and 129.4oz silver from 392.7oz of doré.
- BJM065 achieved 81.45% gold purity, representing the highest purity gravity gold bar produced since NMR recommissioned the Blackjack Plant.
- Mining activities continue to advance across Blackjack Mid Pit, Blackjack South Pit and Podosky, with two blasts completed during the reporting period and a further two blasts scheduled this week.
- Progressive Rehabilitation and Closure Plan (PRCP) compilation and final review for both Blackjack and Far Fanning are progressing, with submission targeted in the coming weeks.

Native Mineral Resources Holdings Limited (ASX: NMR) ("Native Mineral Resources" or the "Company") is pleased to provide an operational and gold production update from its Blackjack Gold Project near Charters Towers, Queensland.

NMR continues to deliver gold production results from the Blackjack Gold Project, with June 2026 on track to achieve highest monthly gold production since recommissioning. Increased feed availability from multiple mining areas, together with continued strong plant performance, has resulted in three successful gold smelts during June and a further smelt planned before month end, positioning the Company for record monthly gold outturn.

*Figure 1: Gold doré bars BJM068-070 (406.4 oz doré), produced during the 21 June 2026 smelt campaign. BJM068-069 Elution Bars: 276.9oz doré. BJM070 Gravity Bar: 129.6oz doré*

**NMR Managing Director & CEO Blake Cannavo commented:** "Blackjack's latest gold pour continues the improved production trend we have seen throughout June and demonstrates the benefits of enhanced mine sequencing and operational performance across the Blackjack operation.

The exceptional **81.45%** purity achieved from gravity bar BJM065 is particularly encouraging and highlights the quality of material currently being processed.

With another gold pour scheduled before the end of June and refinery results pending from the latest pour, we believe the Company is well positioned to deliver its strongest monthly gold production since recommissioning the Blackjack Processing Plant last year."

## Gold Production Update

NMR completed its latest gold smelt yesterday (21 June 2026), producing **406.4oz of gold doré** across three bars (BJM068–070), comprising 276.9oz from two elution bars (BJM068–069) and 129.6oz from one gravity bar (BJM070).

This follows the previous smelt completed on 14 June 2026, which produced three gold doré bars (BJM065–067) totalling **397.8oz doré**. Official refinery results subsequently returned **194.4oz gold** and **129.4oz silver** from an official doré weight of 392.7oz<sup>1</sup>.

Notably, gravity bar BJM065 achieved a gold purity of **81.45% Au**, representing the highest gravity gold purity recorded since recommissioning of the Blackjack Processing Plant.

Bars from NMR's latest smelt were securely dispatched to the refinery, with official assay and outturn results expected within approximately five business days.

Following the 14 June refinery settlement, cumulative June 2026 production stands at **485.3oz gold** and **277.6oz silver**. With refinery results pending from the 21 June smelt and a further gold smelt planned before the end of June, the Company is on track to exceed **800oz** of gold outturn in June 2026, which would represent the highest monthly gold production achieved since commencement of production at Blackjack.

NMR previously achieved its best monthly result of 503.5oz of gold outturn in September 2025, highlighting the increase in gold production it is now achieving as mining activities progress at both the Blackjack and Podosky pits.

## Operational Update

### Far Fanning Stockpile

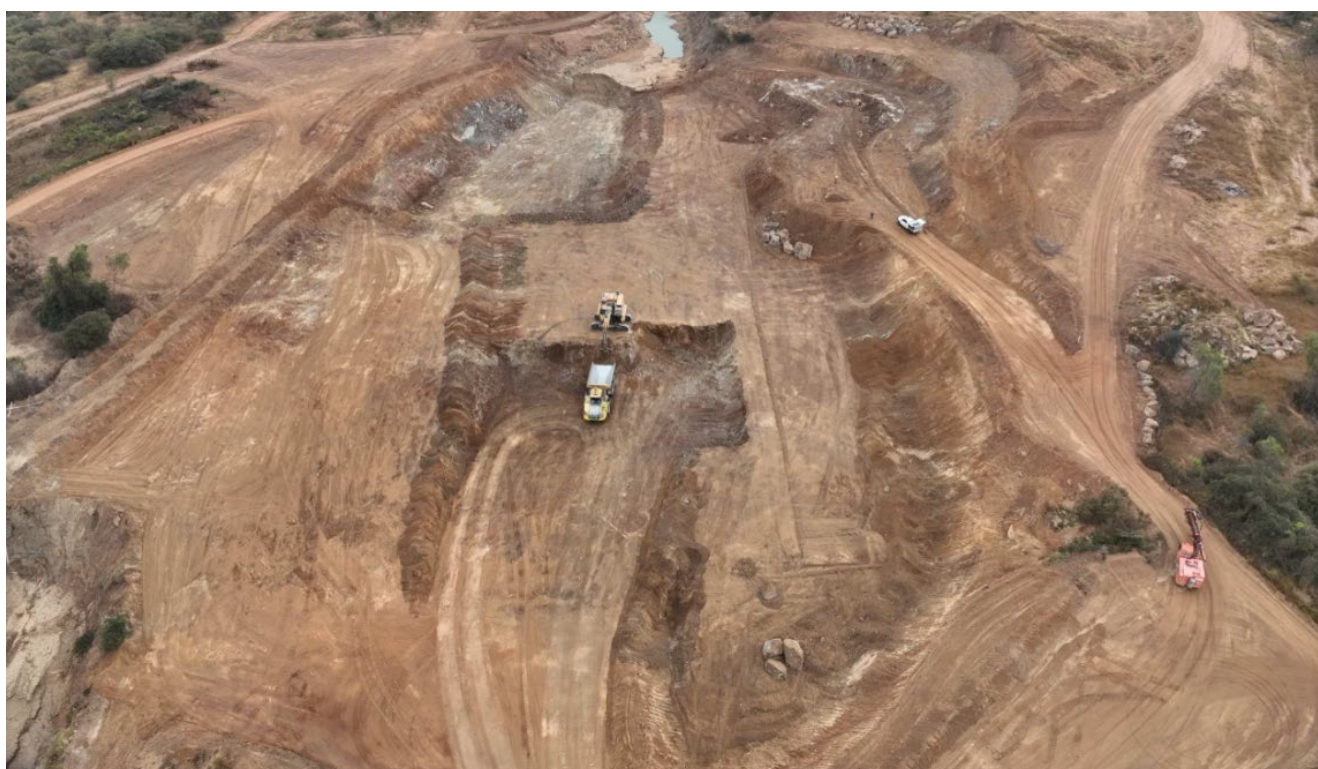

Far Fanning haulage operations continue in accordance with the EEO, with the program progressing as planned and contributing supplementary plant feed to the Blackjack processing operation.

In parallel, NMR has completed a diamond drilling program and is preparing to commence a planned RC drilling program in early July 2026.<sup>2</sup> These activities will support ongoing geological interpretation, mine planning and future development opportunities at Far Fanning.

NMR continues to advance approvals, technical studies and project planning activities as part of its strategy to establish Far Fanning as a future mining front within the Company's broader Charters Towers portfolio.

### Blackjack Mid Pit

Mining activities at Blackjack Mid Pit continue to progress well, with waste stripping nearing completion and approximately one week remaining before full exposure of the targeted mineralised bench. A blast was successfully completed on Ramp 328 last week to facilitate access to Bench 320. Mining remains on schedule, with first feed material expected to be available for processing by the end of June 2026.

**Figure 2:** Mining activities at Blackjack Mid Pit, where waste stripping is nearing completion ahead of access to Bench 320. First feed material from the pit is expected by the end of June 2026.

<sup>2</sup> Refer ASX Announcement dated 25 May 2026 "NMR Achieves Strongest Processing Month"

### **Blackjack South Pit**

Drilling activities for Bench 304 were completed on 19 June 2026. Following receipt and review of blast hole assay results, charging and blasting activities are scheduled for completion this week. The planned blast will provide access to additional feed material and support continued mining progression at South Pit.

*Figure 3: Blackjack South Pit drilling program completed on 19 June 2026. Charging and blasting activities for Bench 304 are scheduled this week to provide access to additional feed material.*

### **Podosky Mining**

Mining activities at Podosky continue to advance in accordance with the mine schedule. A production blast was successfully completed on Bench 267.5 last week, following completion of mining activities on Bench 277.5 where the fifth and final blast was completed on 11 June 2026.

The mining contractor is currently progressing waste removal activities on Flitch 275. A further production blast is scheduled for 25 June 2026 on Bench 267.5-01 as mining advances towards lower benches containing significant mineralised material.

*Figure 4: Mining activities at Podosky continue to advance on schedule, with waste removal progressing on Flitch 275 and the next production blast planned for Bench 267.5-01 on 25 June 2026.*

## Water Supply Development

Water bore drilling is scheduled to commence this week as part of NMR's strategy to secure additional long-term processing water supply for the Blackjack operation.

The drilling program will be followed by bore construction and testing, providing further flexibility to support future production growth.

## Approvals Update

Preparation of Progressive Rehabilitation and Closure Plans (PRCPs) for both Blackjack and Far Fanning continues to advance. A formal PRCP risk review workshop was completed on 8 June 2026, with final compilation and review currently being undertaken with SLR Consulting. Submission of both PRCPs remains targeted for the coming weeks.
