

DETAILED GEOPHYSICAL SURVEY COMMENCES AT STOKES YARD BASE METAL PROJECT

Geophysical survey to follow-up on outstanding high-grade base metal rock chip samples

Todd River Resources Limited (ASX: TRT; “Todd River” or “the Company”) is pleased to announce that a moving-loop geophysics program (“MLTEM”) has commenced at its 100%-owned Stokes Yard Base Metal Project in the Northern Territory (Figure 1).

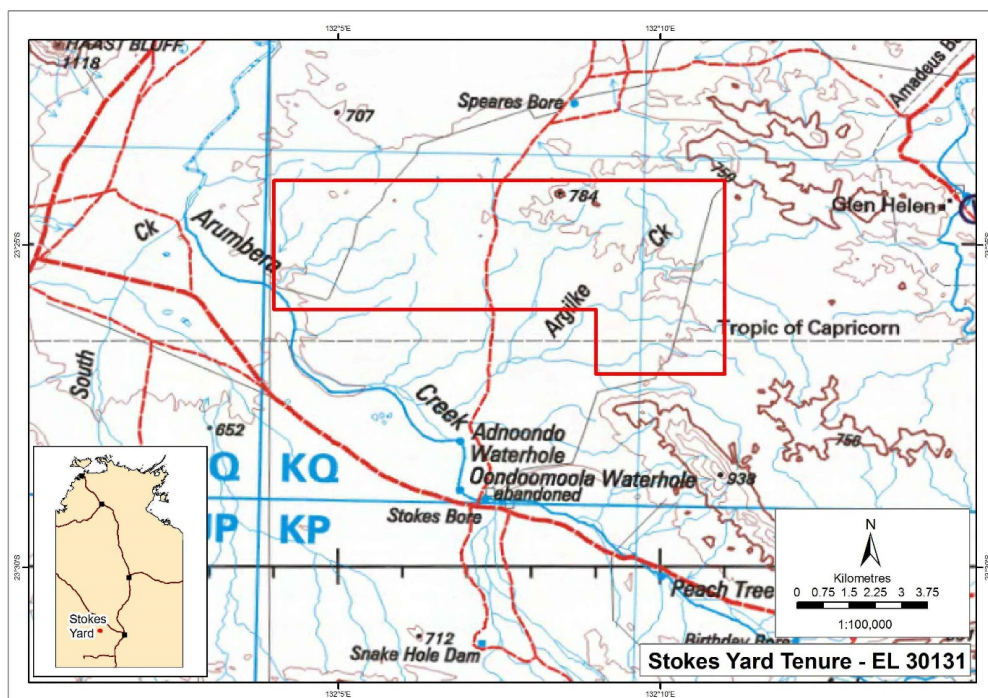

Figure 1 – Stokes Yard Project Location

The MLTEM Survey (Figure 2) will focus on an area where co-incident anomalous soil geochemistry (Figure 3) and outstanding rock chip results have been previously reported (see ASX announcement, 14 June 2018). The survey will cover approximately 40 line kilometres and utilise a 200m square transmitter loop and 100m or 50m moves. Data will be collected using an in-loop configuration with a three-component antenna. It is expected that the survey will take approximately 10-12 days to complete.

Commenting on the commencement of the program, Todd River’s Chief Executive Officer, Will Dix, said:

“As part of our commitment to progress our high-priority pipeline exploration projects, we are delighted that we can utilise the GAP geophysics crew at Stokes Yard before they head back to Mt Hardy for further work on our flagship project later this month in parallel with the recently commenced drilling program.”

“Stokes Yard is an area that has had very little work completed previously other than first-pass surface sampling which returned excellent high-grade zinc, lead and copper results so we’re looking forward to seeing what shows up in the geophysics and hopefully developing a drilling program for 2019.”

Competent Person Statements

The information in this announcement that relates to exploration results is extracted from ASX announcement titled:

- “Assay Results confirm High Grade Discovery at Mount Hardy”, lodged on 20 June 2018.

which is available to view at www.trrltd.com.au and www.asx.com.au. The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement. The Company confirms that the form and context in which the Competent Person’s findings are presented have not been materially modified from the original market announcement.

About Todd River Resources

Todd River Resources (ASX: TRT) is an Australian-based resources company that holds a large, highly prospective zinc and base metals exploration portfolio in the Northern Territory. The Company was formerly

a subsidiary of ASX-listed strategic metals company TNG Ltd (ASX: TNG), and was spun-out of TNG in 2016 to advance and develop TNG's significant portfolio of non-core base metals assets.

With a strong management team and tight capital structure, Todd River is well placed to pursue exploration activities across its exploration portfolio, which are aimed at establishing the Company as a leading force in Australian zinc exploration and development.

Todd River's extensive base metal portfolio includes the large Manbarrum Zinc Project, the Mount Hardy Copper-Zinc Project, the Stokes Yard Zinc Project and the McArthur Copper-Zinc project, as well as a number of other exploration projects covering base metals and other commodities.
