

Jupiter Drilling delivers record intersection of 48 metres @ 3,025 ppm TREO

The Board of Venture Minerals (ASX: VMS) is pleased to announce the first batch of assay results from the recently completed Stage One Resource definition drill program (See Figure 1) at the large-scale, clay hosted Jupiter Rare Earths prospect in the Mid-West region of Western Australia. **The headline result is the highest grade, clay hosted REE intersection in Australia.**

Highlights

- Record intersection of **48 metres (m) @ 3,025 ppm TREO¹** in BRRC 071.
- Very high-grade results in BRRC 031 & 074 including **assays up to 10,266 ppm & 20,538 ppm TREO** respectively.
- Consistent high-grade zones of 20-30 m widths over 2,000 ppm TREO in 96% of holes.
- High grade zones sit within broader zones up to 60 m grading well over 1,000 ppm TREO.
- Results include **high grades of Magnet Rare Earth Oxides (MREO²)** up to:
 - **3,288 ppm Nd₂O₃ (Neodymium)**
 - **788 ppm Pr₆O₁₁ (Praseodymium)**
 - **674 ppm Dy₂O₃ (Dysprosium)**
 - **101 ppm Tb₂O₃ (Terbium).**
- Extremely low Thorium and Uranium.
- Results validate geophysics and cover only a fraction of the 40 km² target (See Figures 1,3 & 4).
- Assay results pending on remaining 57 holes.

Table One: Jupiter Drill Intersection Highlights (See Figure 1 and Tables 2 & 3 for full details)

| Hole No. | Intersection(m) | TREO (ppm) | including |
|----------|-----------------|--------------|--|
| BRAC061 | 28 | 1,849 | |
| BRRC031 | 30 | 3,142 | 12 m @ 4,673 ppm and 2 m @ 10,266 ppm |
| BRRC032 | 32 | 1,637 | 14 m @ 2,313 ppm |
| BRRC034 | 60 | 1,487 | 4 m @ 2,046 ppm |
| BRRC069 | 42 | 1,839 | 28 m @ 2,067 ppm |
| BRRC071 | 48 | 3,052 | |
| BRRC072 | 50 | 1,722 | 20 m @ 2,519 ppm |
| BRRC074 | 16 | 5,399 | 2 m @ 20,538 ppm |
| BRRC078 | 56 | 1,607 | 24 m @ 2,060 ppm |

Venture's Managing Director commented,

"These record breaking ultra-high grade REE clay results, for Jupiter, place us well above our peers in terms of both grade and scale. What's incredible is that these results are not isolated. They confirm consistent grades over 2,000 ppm TREO in broad widths of 20-30 meters in 96% of the holes and that is sitting within zones of around 60 m over 1,000 ppm TREO."

"We have lots of news flow to come, with further results pending for our Maiden Resource drill program. This drilling is widely spaced and down the track we will be working on infill drilling with the potential to uncover more impressive grades. Most drilling will be shallow aircore and RC, so its highly cost-effective. Keep in mind that these results cover a small area of our enormous, 40 km² target and you can certainly understand that Jupiter is shaping up to be an incredibly impressive project".

1. TREO represents the sum of 14 Rare Earth Elements excluding Promethium plus Yttrium expressed as oxides.

2. MREO represents the sum of the Neodymium, Praseodymium, Dysprosium and Terbium expressed as oxides.

Figure 1 | Jupiter 40 km² target with drill hole locations and significant intersections on Bouger gravity 2.67 anomaly as defined by recent high resolution ground gravity surveying. RED outline labels for drill intersections from the Stage One Resource Drilling, BLUE outline labels for drill intersections from the previous drill programs.

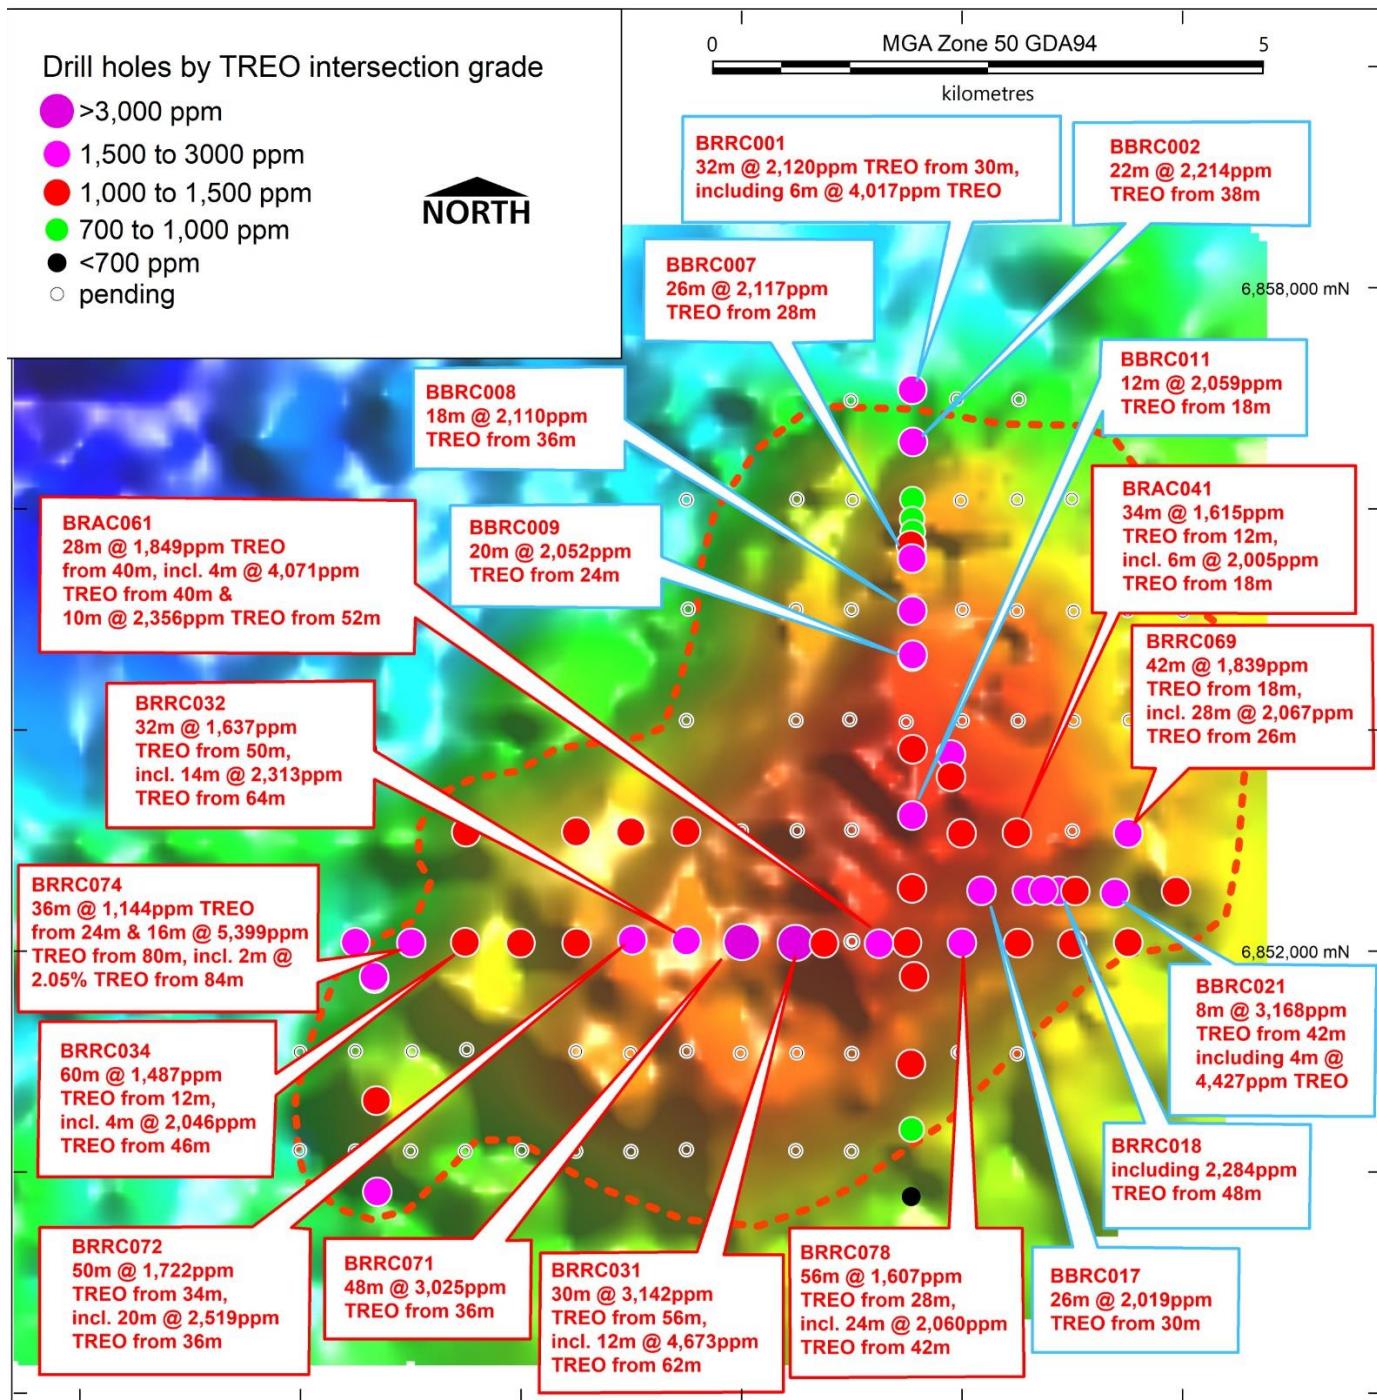

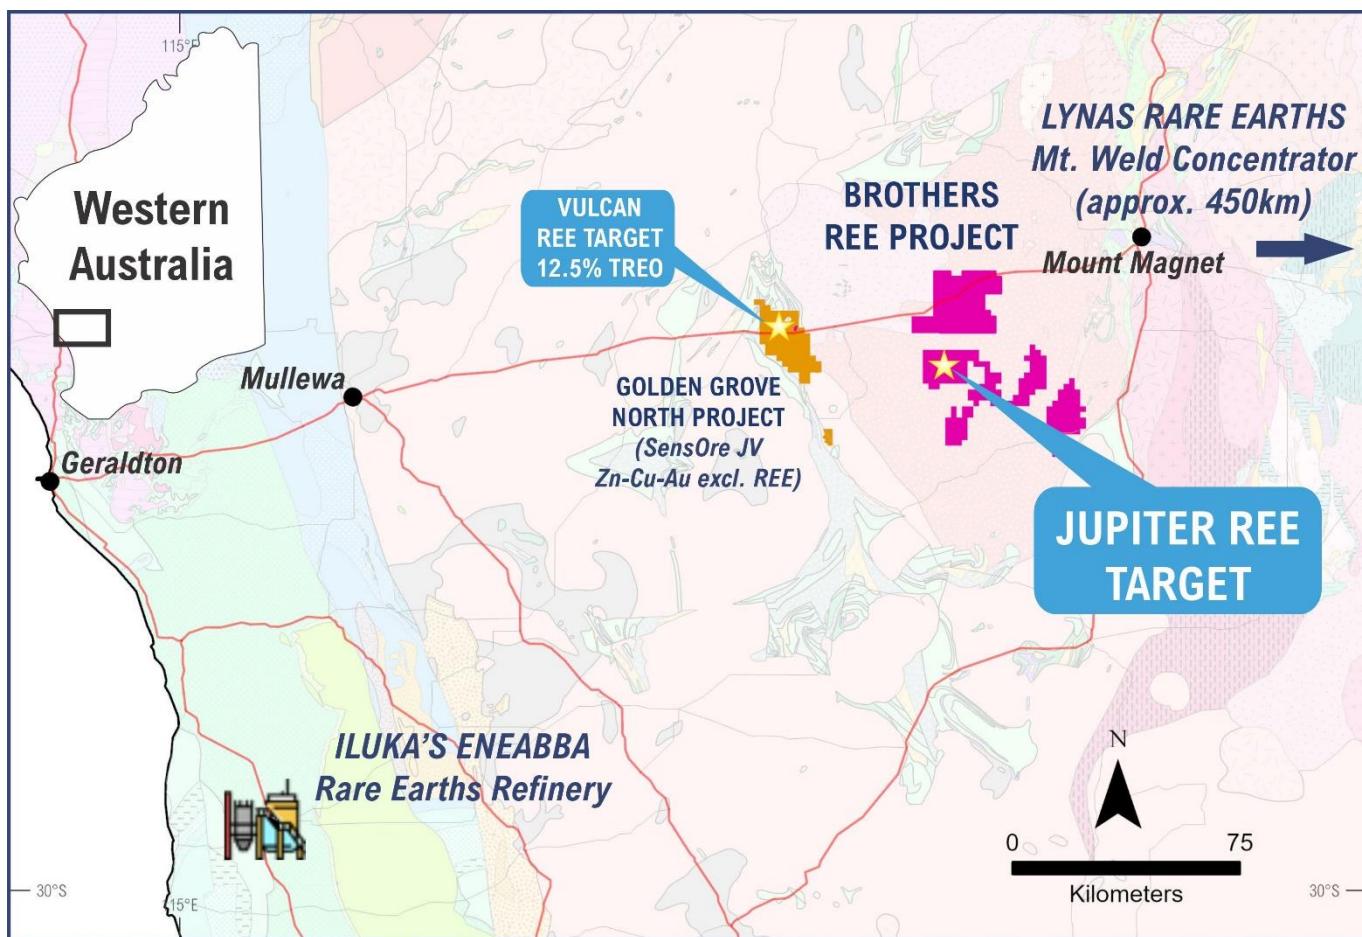

Figure 2 | Location Map of the Brothers REE Project with the Jupiter Target, in Western Australia

Venture Minerals Limited (ASX code: VMS) ("Venture" or the "Company") is pleased to announce the first batch of assay results from the recently completed Stage One Resource definition drill program at the large-scale, clay hosted Jupiter Rare Earths Elements ("REE") prospect at the Brothers Project located in the Mid-West region of Western Australia. The results validate geophysics and cover only a fraction of the 40 km² Jupiter target.

The headline result of 48 m @ 3,025 ppm TREO in BRRC 71 is the highest grade, clay hosted REE intersection in Australia. In addition, there are very high-grade results in both BRRC 031 & 074 including assays up to 10,266 ppm & 20,538 ppm TREO respectively, with the latter being one of the highest clay hosted REE assay results in Australia to date.

Assay results for 23 of the 24 (96%) drill holes received, again returned consistent 20-30 m widths of REE mineralisation grading over 2,000 ppm TREO within broader zones up to 60 m grading well over 1,000 ppm TREO with extremely low levels of Thorium and Uranium. These results are very similar to the results announced in the previous drill program of 25 RC drill holes at Jupiter (Refer to ASX announcement 29 November 2023).

The MREO assays received include several over 1,000 ppm Nd₂O₃ (Neodymium) up to 3,288 ppm, and several over 300 ppm Pr₆O₁₁ (Praseodymium) up to 788 ppm, and a several over 50 ppm Dy₂O₃ (Dysprosium) up to 674 ppm, and several over 10 ppm Tb₂O₃ (Terbium) up to 101 ppm.

There are 57 drill holes worth of assays pending from the two outstanding batches from the Stage One Resource definition drill program which was completed late last year with a revised total 81 holes drilled for 5,074 m on a 1000 m x 500 m spaced pattern across the 40 km² target. The final drill program

consisted of 29 Aircore ("AC") drill holes completed for 1,825 m and 52 Reverse Circulation ("RC") holes completed for 3,249 m.

The Brothers Project (including the Jupiter prospect) is well located in regional Western Australia (*Refer to Figure 2*) away from any significant population centres but close to infrastructure with a nearby bitumen highway and gas pipeline on route to the major port of Geraldton 300 km away. Brothers is also only ~250 km from Iluka's Eneabba Rare Earths Refinery to be in production in 2025 (*Refer to ASX: ILU announcement "Eneabba Rare Earths Refinery – Final Investment Decision" 3 April 2022*) and only ~520 km from Lynas Rare Earths currently operating Mount Weld Concentrator.

As part of Iluka Resources Limited's decision to build the Eneabba Rare Earths Refinery it had reached an agreement of a risk sharing arrangement with the Australian Government, including a non-recourse loan of \$1,050 million plus a \$200 million cost overrun facility under the Australian Government's \$2 billion Critical Minerals Facility, administered by Export Finance Australia. Iluka's close collaboration with the Australian Government reflects the alignment of their commercial objectives for its rare earths business with the Commonwealth's Critical Minerals Strategy.

Lynas is currently commissioning its new Rare Earths Processing Facility in Kalgoorlie, on 22 July 2021, it announced that it was awarded a \$14.8 million grant as part of the Australian government's Modern Manufacturing Initiative's Manufacturing Translation Stream for Resources Technology and Critical Minerals Processing. The grant was given to enable Lynas to commercialise an industry-first Rare Earth carbonate refining process. In addition, Lynas announced on the 3 August 2022 an ~\$500m project to expand capacity at the Mount Weld mine and concentration plant to meet accelerating market demand for rare earth materials. The combined project clearly supports the Australian Government's Critical Minerals Strategy and the Western Australian Government's Battery and Critical Minerals Strategy.

The substantial co-investment by two of Australia's major mining companies with the Australian Government into the Rare Earths industry within the same region of Western Australia that Venture's Brothers Project sits put it in an enviable position and provides the Company with significant commercial advantages should the project move towards development.

Depending on assay results from the rest of the Stage One Resource definition drill program and mineralogical and metallurgical testwork, a follow-up Stage Two Resource definition drill program is planned at Jupiter with slimline RC drilling and possible AC drilling depending on drilling conditions and rig availability.

Figure 3 | Venture Mineral's Brothers Project combined tenure (granted) on regional geology with total magnetic intensity image highlighting large interpreted alkaline intrusion and clay hosted REE mineralisation at the Jupiter target.

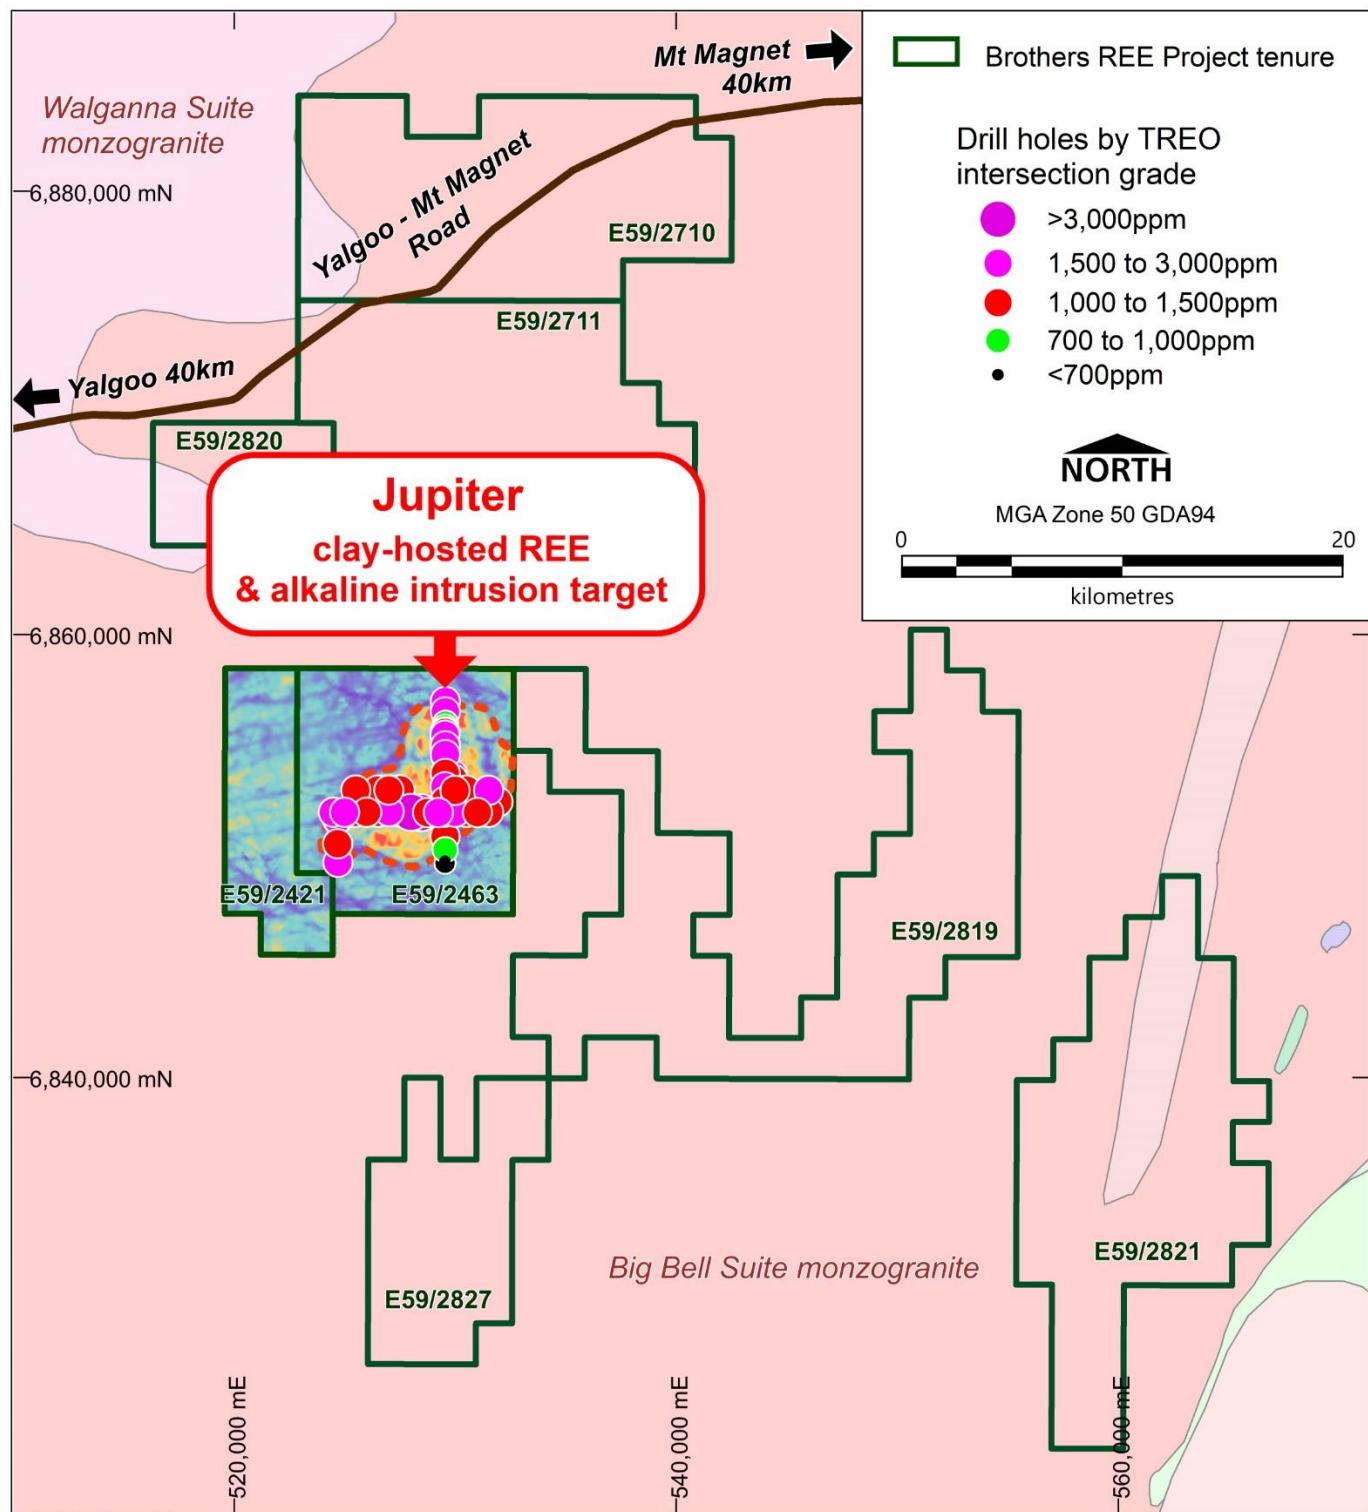

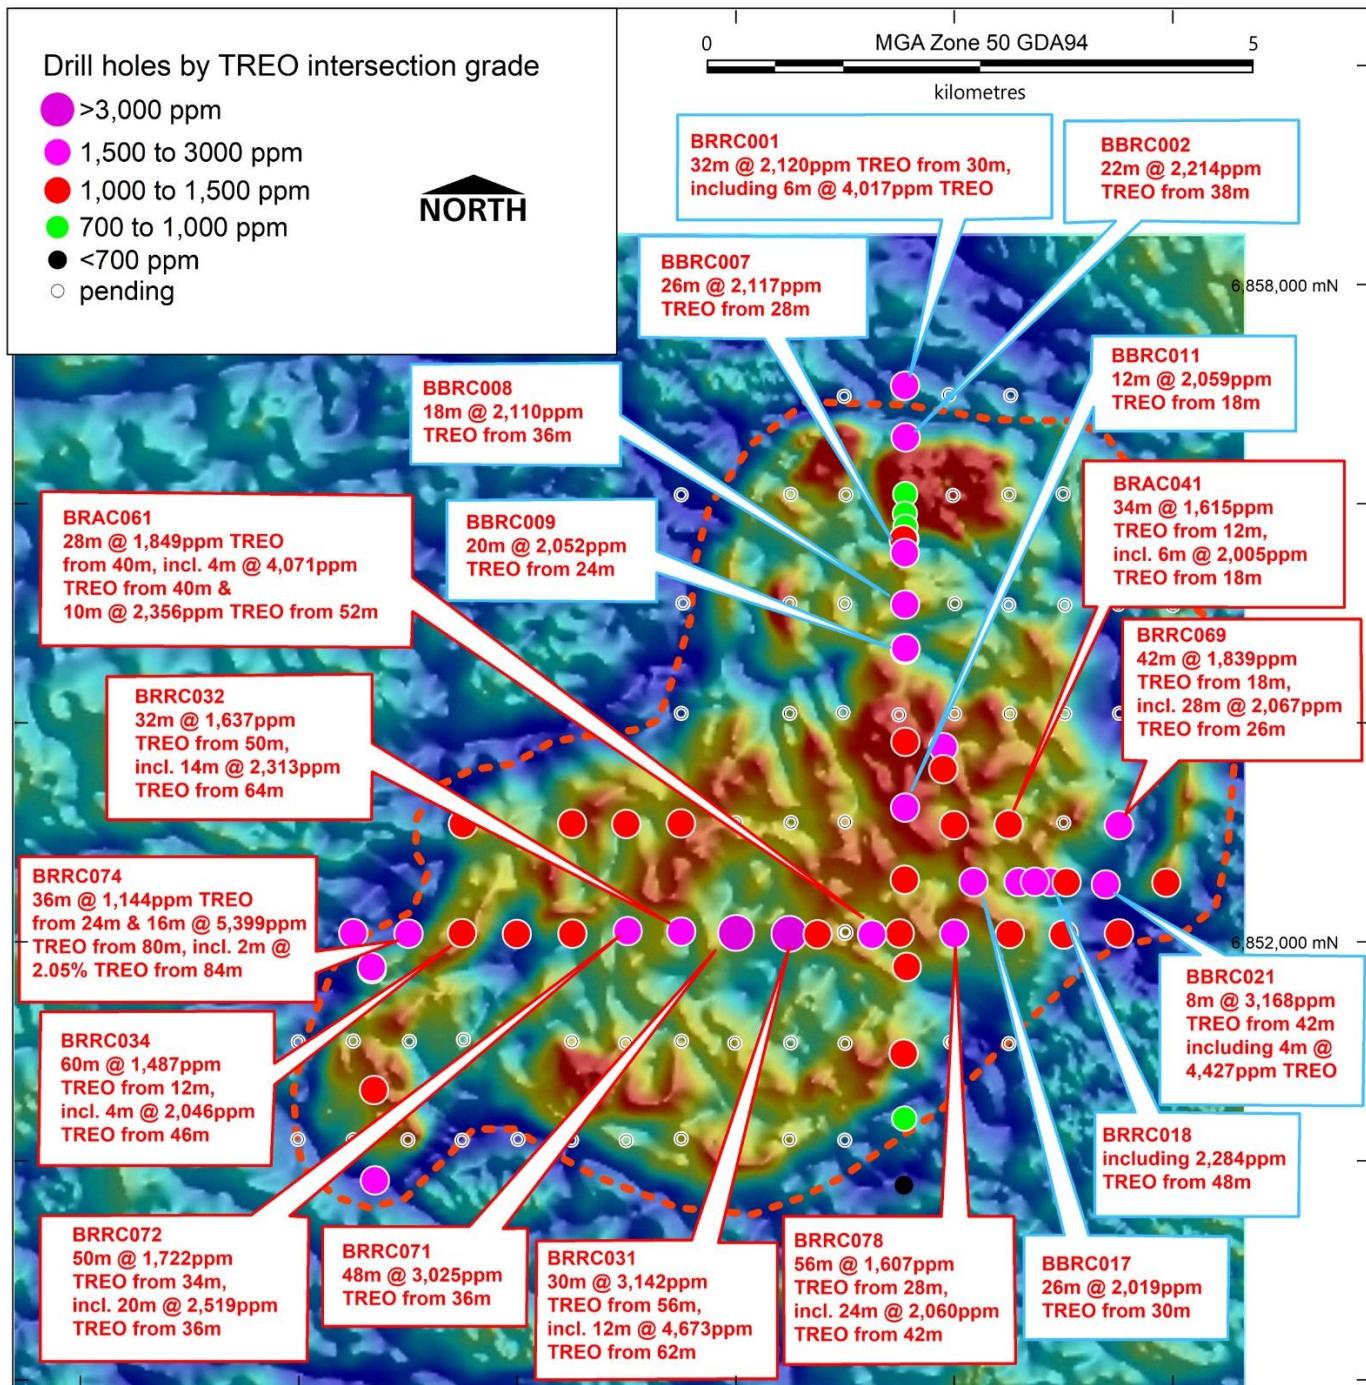

Figure 4 | Jupiter drill hole locations and significant intersections on total magnetic intensity (reduced to pole, NE sun) anomaly as defined by recent high resolution drone magnetic surveying. RED outline labels for drill intersections from the Stage One Resource Drilling, BLUE outline labels for drill intersections from the previous drill programs.

Authorised by the Managing Director on behalf of the Board of Venture Minerals Limited.

Yours sincerely

Andrew Radonjic
Managing Director

The information in this report that relates to Exploration Results, Exploration Targets and Minerals Resources is based on information compiled by Mr Andrew Radonjic, a fulltime employee of the company and who is a Member of The Australasian Institute of Mining and Metallurgy. Mr Andrew Radonjic has sufficient experience which is relevant to the style of mineralisation and type of deposits under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Andrew Radonjic consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

About Venture Minerals

Venture Minerals Ltd (ASX: VMS) has made a recent discovery at the Brothers REE Project including the Jupiter Clay Hosted Rare Earths Prospect. The Brothers Project includes the Iron Duke JV which hosts the Jupiter Prospect and is a potentially significant REE clay hosted discovery near Yalgoo in Western Australia. Brothers is well located to significant infrastructure including the port of Geraldton, Iluka's Eneabba Rare Earths Refinery and Lynas Rare Earths currently operating Mount Weld Concentrator. The Mount Lindsay Tin-Tungsten Project in northwest Tasmania, already one of the world's largest undeveloped Tin-Tungsten deposits. With the recognition of Tin as a fundamental metal to the battery revolution and Tungsten being a critical mineral, Venture has commenced an Underground Feasibility Study on Mount Lindsay that will leverage off the previously completed open-pit feasibility work, and recently included additional, potential large-scale quantities of tin and boron within the current resource base, and extensively throughout the greater Mount Lindsay skarn system. The tin-borates have not previously been assessed in any mining studies. Borate minerals contain a large amount of Boron, a critical mineral in the solar panel industry. At the neighbouring Riley Iron Ore Mine, the mine is prepared for a quick restart should the market conditions become favourable. In Western Australia, Chalice Mining (ASX: CHN) recently committed to the second stage of the JV which requires a further \$2.5 million of expenditure over the next two years to earn a further 19% interest (for a total of 70%) in Venture's South West Project. At the Company's Golden Grove North Project, SensOre (ASX: S3N) is farming in whilst Venture retains the REE rights, the earn-in includes drilling of the Vulcan High Grade REE Target. SensOre's proprietary AI technology has already highlighted lithium and copper exploration potential at Golden Grove North. The Company has a significant Nickel-Copper-PGE landholding at Kulin with two highly prospective 20-kilometre-long Ni-Cu-PGE targets within the Kulin Project, whilst recent exploration has identified clay hosted REE targets.

Notes: All co-ordinates MGA Zone 50 GDA94, all holes vertical.

TREO represents the sum of 14 Rare Earth Elements excluding Promethium plus Yttrium expressed as oxides. MREO represents the sum of the Neodymium, Praseodymium, Dysprosium and Terbium expressed as oxides See Table Three for complete REE assay listing.

All are made up of 2 m composite sample results except those marked as * where a mixture of 2 m and 6 m composite sample results are used.

Table Three: Jupiter Stage One Resource Drilling REE, Th and U assays.

| Hole | From m | To m | Interval m | TREO ppm | La ₂ O ₃ ppm | CeO ₂ ppm | Pr ₆ O ₁₁ ppm | Nd ₂ O ₃ ppm | Sm ₂ O ₃ ppm | Eu ₂ O ₃ ppm | Gd ₂ O ₃ ppm | Tb ₄ O ₇ ppm | Dy ₂ O ₃ ppm | Ho ₂ O ₃ ppm | Er ₂ O ₃ ppm | Tm ₂ O ₃ ppm | Yb ₂ O ₃ ppm | Lu ₂ O ₃ ppm | Y ₂ O ₃ ppm | Th ppm | U ppm |

Appendix One

JORC Code, 2012 Edition | 'Table 1' Report

Section 1 Sampling Techniques and Data

(Criteria in this section apply to all succeeding sections)

| Criteria | JORC Code explanation | Commentary |
|--|---|---|
| Sampling techniques | <ul style="list-style-type: none"> Nature and quality of sampling (e.g.: cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc.). These examples should not be taken as limiting the broad meaning of sampling. Measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used. Aspects of the determination of mineralisation that are Material to the Public Report. In cases where 'industry standard' work has been done this would be relatively simple (e.g.: 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (e.g.: submarine nodules) may warrant disclosure of detailed information. | <ul style="list-style-type: none"> 81 4.5 inch Reverse Circulation (RC) and 3.5 inch Air Core (AC) drill holes for 5,074 m (1,825 m AC and 3,249 m RC) were drilled within the newly defined Jupiter target (see <i>Venture Minerals announcement to the ASX 9 November 2023</i>). The RC and AC drill cuttings were collected from the drill rig cyclone in 1 m intervals, bagged and arranged in rows on site for assay sampling. Composite samples representing 2 to 6 m intervals were collected as appropriate by sampling spear from the bulk 1 m samples. Drilling and sampling was supervised by a suitably qualified Venture Minerals geologist. Samples were submitted to commercial assay laboratory ALS Geochemistry ("ALS") for assay. |
| Drilling techniques | <ul style="list-style-type: none"> Drill type (e.g.: core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc..) and details (e.g.: core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc..). | <ul style="list-style-type: none"> This report is based on 52 holes drilled with a Schramm 450 RC rig with booster and auxiliary compressor and 29 holes with a KL 150 AC rig, both operated by KTE Mining Services Pty Ltd. Both rigs were operated with blades (4.5 inch blades for RC and 3.5 inch blade for AC) and holes were drilled to blade refusal in near fresh to fresh rock. |
| Drill sample recovery | <ul style="list-style-type: none"> Method of recording and assessing core and chip sample recoveries and results assessed. Measures taken to maximise sample recovery and ensure representative nature of the samples. Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material. | <ul style="list-style-type: none"> The bulk RC and AC samples were visually assessed and considered representative with good recovery. Most of the holes encountered water but it did not significantly impact recovery or sample representativity. |
| Logging | <ul style="list-style-type: none"> Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies. Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc.) photography. The total length and percentage of the relevant intersections logged. | <ul style="list-style-type: none"> All holes were qualitatively geologically logged by suitably qualified Venture Minerals geologists. Mineral Resources have not been estimated. The detail of geological logging is considered sufficient for mineral exploration. |
| Sub-sampling techniques and sample preparation | <ul style="list-style-type: none"> If core, whether cut or sawn and whether quarter, half or all core taken. If non-core, whether riffled, tube sampled, rotary split, etc. and whether sampled wet or dry. For all sample types, the nature, quality and appropriateness of the sample preparation technique. Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples. Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field duplicate/second-half sampling. Whether sample sizes are appropriate to the grain size of the material being sampled. | <ul style="list-style-type: none"> Drill composites of 2 to 6 m length were collected by sampling spear from the bulk 1 m samples. Assay sample weights ranged from 0.8-5 kg. Sample sizes is considered appropriate for the material sampled. Commercial assay standards were included in the laboratory submittals at a rate of c. one per 30 samples. Field duplicate samples were collected at a rate of one duplicate per mineralised zone (c. 1 per 40 samples). The assay results match observed mineralisation well and the 2 to 6 m sample lengths and sizes are considered appropriate for the observed mineralisation. |

| Criteria | JORC Code explanation | Commentary |
|---|---|---|
| Quality of assay data and laboratory tests | <ul style="list-style-type: none"> The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total. For geophysical tools, spectrometers, handheld XRF instruments, etc., the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc. Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established. | <ul style="list-style-type: none"> All samples were submitted to ALS Geochemistry, Perth ("ALS") where they were oven dried then pulverized to P80 -75 microns (method PUL-23). Assaying of drill samples was conducted by ALS using a lithium borate fusion at 1025 deg C followed by nitric + hydrochloric + hydrofluoric acid digestion of the resultant glass bead and ICP-MS finish for 32 elements including full REE suite (ALS method ME-MS81). Internal commercial assay standards all reported within 20% of the reference values for all REEs + Y and >90% of the assay standards reported within 10% of the reference values. |
| Verification of sampling and assaying | <ul style="list-style-type: none"> The verification of significant intersections by either independent or alternative company personnel. The use of twinned holes. Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols. Discuss any adjustment to assay data. | <ul style="list-style-type: none"> The use of twinned holes is not applicable at this stage. The assay results are compatible with observed mineralogy. Primary data is stored and documented in industry standard ways. Venture Minerals assay data is as reported by ALS and has not been adjusted in any way. Remnant assay pulps are currently held in storage by ALS. |
| Location of data points | <ul style="list-style-type: none"> Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation. Specification of the grid system used. Quality and adequacy of topographic control. | <ul style="list-style-type: none"> Drill hole locations were determined by handheld GPS with a nominal accuracy of +/- 5 metres. All coordinates and maps presented here are in the MGA Zone 50 GDA94 system. Topographic control is provided by Worldwide 3 arc second SRTM spot height data. |
| Data spacing and distribution | <ul style="list-style-type: none"> Data spacing for reporting of Exploration Results. Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied. Whether sample compositing has been applied. | <ul style="list-style-type: none"> The reported drilling is part of a preliminary grid based resource drill out and was mostly conducted on 500 m spacing along cleared lines 1 km apart. The assay results reported here are for 2 to 6 m intervals composited from the bulk 1 m RC and AC sample intervals. |
| Orientation of data in relation to geological structure | <ul style="list-style-type: none"> Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type. If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material. | <ul style="list-style-type: none"> The RC and AC holes were drilled vertically along existing pastoral tracks. The intersected clay and saprolite zones blanket weathered granitoid basement such that downhole thickness approximate true thickness. |
| Sample security | <ul style="list-style-type: none"> The measures taken to ensure sample security. | <ul style="list-style-type: none"> The chain of custody for all Venture Minerals samples from collection to dispatch to assay laboratory was managed by Venture Minerals personnel. Sample numbers are unique and do not include any locational or interval information useful to non-Venture Minerals personnel. The level of security is considered appropriate for such exploration drilling. |
| Audits or reviews | <ul style="list-style-type: none"> The results of any audits or reviews of sampling techniques and data. | <ul style="list-style-type: none"> Duplicate sampling at a rate of 1 field duplicate per mineralised zone (1 per c. 40 samples) was used to evaluate sampling error and is acceptable for such exploration drilling. The RC and AC drilling results are compatible with Venture Minerals' previously reported AC drilling results. Laboratory assays are compatible with field pXRF data. |

Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section)

| Criteria | JORC Code explanation | Commentary | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
|--|---|--|--------------------------------|-------|--------------------------------|-------|------------------|-------|--------------------------------|-------|---------------------------------|-------|--------------------------------|-------|--------------------------------|-------|--------------------------------|-------|--------------------------------|------|--------------------------------|-------|--------------------------------|-------|--------------------------------|-------|--------------------------------|-------|--------------------------------|-------|--|--|-------------------------------|------|
| Mineral tenement and land tenure status | <ul style="list-style-type: none"> Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings. The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area. | <ul style="list-style-type: none"> The Brothers REE Project consists of granted Exploration Licences E59/2710, E59/2711, E59/2819, E59/2820, E59/2821, E59/2827, E59/2421 and E59/2463. E59/2710, E59/2711, E59/2819, E59/2820, E59/2821, and E59/2827 area held 100% held by Tasmanian Rare Earth Pty Ltd a wholly owned subsidiary of Venture Minerals. E59/2421 and E59/2463 are subject of a Joint Venture between Venture Minerals and owners Merchant Ventures Pty Ltd. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Exploration done by other parties | <ul style="list-style-type: none"> Acknowledgment and appraisal of exploration by other parties. | <ul style="list-style-type: none"> Documented previous explorers within the area now covered by the Brothers Project include North Flinders Mines Ltd, CRA Exploration Pty Ltd, Spark Energy Pty Ltd, Arcadia Minerals Ltd, Babalya Gold Pty Ltd, Burmine Ltd, Equigold NL, Equinox Resources NL, Jervois Mining Ltd, Minjar Gold Pty Ltd, Mount Magnet South NL, Sons Of Gwalia Ltd and David Ross. Refer to previous Venture Minerals announcements to the ASX and also available from http://ventureminerals.com.au | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Geology | <ul style="list-style-type: none"> Deposit type, geological setting and style of mineralisation. | <ul style="list-style-type: none"> The Brothers REE exploration area is situated within the Western Australian Archean Yilgarn Craton and mostly comprises Cenozoic cover sequence overlying an extensive Archean monzogranite complex (the Big Bell and Walganna suites). | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Drill hole Information | <ul style="list-style-type: none"> A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes: <ul style="list-style-type: none"> easting and northing of the drill hole collar elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar dip and azimuth of the hole down hole length and interception depth hole length. If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case. | <ul style="list-style-type: none"> Location and orientation details are given in Table 2. Collar location was determined by handheld Garmin GPS64sx and is considered accurate to ±5m. All coordinates and maps presented here are in the MGA Zone 50 GDA94 system. Topographic control is provided by Worldwide 3 arc second SRTM spot height data. Refer to ASX Announcements 9 May 2023 and 1 August 2023 for historic RC drill results and initial Brothers Project AC drill results respectively. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Data aggregation methods | <ul style="list-style-type: none"> In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (e.g. cutting of high grades) and cut-off grades are usually Material and should be stated. Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail. The assumptions used for any reporting of metal equivalent values should be clearly stated. | <ul style="list-style-type: none"> Full sample assay interval results without aggregation methods are given in Table 3. Metal equivalents have not been applied. Refer to ASX Announcement 9 May 2023 for historic drilling. Standard element to oxide conversion factors have been used. Individual REE values in Table 2 and 3 are rounded to appropriately reflect reporting precision and the TREO field was calculated on an unrounded basis. <table border="1" data-bbox="825 1751 1421 1949"> <tbody> <tr> <td>La₂O₃</td><td>1.173</td> <td>Tb₄O₇</td><td>1.176</td> </tr> <tr> <td>CeO₂</td><td>1.228</td> <td>Dy₂O₃</td><td>1.148</td> </tr> <tr> <td>Pr₆O₁₁</td><td>1.208</td> <td>Ho₂O₃</td><td>1.146</td> </tr> <tr> <td>Nd₂O₃</td><td>1.166</td> <td>Er₂O₃</td><td>1.143</td> </tr> <tr> <td>Sm₂O₃</td><td>1.16</td> <td>Tm₂O₃</td><td>1.142</td> </tr> <tr> <td>Eu₂O₃</td><td>1.158</td> <td>Yb₂O₃</td><td>1.139</td> </tr> <tr> <td>Gd₂O₃</td><td>1.153</td> <td>Lu₂O₃</td><td>1.137</td> </tr> <tr> <td></td><td></td> <td>Y₂O₃</td><td>1.27</td> </tr> </tbody> </table> | La ₂ O ₃ | 1.173 | Tb ₄ O ₇ | 1.176 | CeO ₂ | 1.228 | Dy ₂ O ₃ | 1.148 | Pr ₆ O ₁₁ | 1.208 | Ho ₂ O ₃ | 1.146 | Nd ₂ O ₃ | 1.166 | Er ₂ O ₃ | 1.143 | Sm ₂ O ₃ | 1.16 | Tm ₂ O ₃ | 1.142 | Eu ₂ O ₃ | 1.158 | Yb ₂ O ₃ | 1.139 | Gd ₂ O ₃ | 1.153 | Lu ₂ O ₃ | 1.137 | | | Y ₂ O ₃ | 1.27 |
| La ₂ O ₃ | 1.173 | Tb ₄ O ₇ | 1.176 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| CeO ₂ | 1.228 | Dy ₂ O ₃ | 1.148 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Pr ₆ O ₁₁ | 1.208 | Ho ₂ O ₃ | 1.146 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Nd ₂ O ₃ | 1.166 | Er ₂ O ₃ | 1.143 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Sm ₂ O ₃ | 1.16 | Tm ₂ O ₃ | 1.142 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Eu ₂ O ₃ | 1.158 | Yb ₂ O ₃ | 1.139 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Gd ₂ O ₃ | 1.153 | Lu ₂ O ₃ | 1.137 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| | | Y ₂ O ₃ | 1.27 | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Relationship between mineralisation widths and intercept lengths | <ul style="list-style-type: none"> These relationships are particularly important in the reporting of Exploration Results. If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported. | <ul style="list-style-type: none"> The intersected clay and saprolite zones blanket weathered granitoid basement such that downhole thickness approximate true thickness. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

| Criteria | JORC Code explanation | Commentary |
|------------------------------------|---|---|
| | <ul style="list-style-type: none"> If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (e.g. 'down hole length, true width not known'). | |
| Diagrams | <ul style="list-style-type: none"> Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views. | <ul style="list-style-type: none"> Appropriate exploration maps are included in this release. |
| Balanced reporting | <ul style="list-style-type: none"> Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results. | <ul style="list-style-type: none"> Complete assay results for the announced intersections are included in Table 3. |
| Other substantive exploration data | <ul style="list-style-type: none"> Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances. | <ul style="list-style-type: none"> The results are considered indicative only of the mineralisation in the area. Refer to ASX Announcements 9 May 2023 and 9 November 2023 for significant historic drill holes, geochemical results and geophysical survey information. The project is at a reconnaissance exploration stage and bulk density, geotechnical, hydrogeological and metallurgical work have yet to be done. |
| Further work | <ul style="list-style-type: none"> The nature and scale of planned further work (e.g. tests for lateral extensions or depth extensions or large-scale step-out drilling). Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive. | <ul style="list-style-type: none"> Venture proposes to better define the identified REE mineralisation at the Jupiter target by further AC and RC drilling, and additionally continue to reconnaissance drill test satellite targets within the broader Brothers REE project area. Venture is currently commissioning metallurgical assays (including leachability) on selected mineralised intervals. Appropriate exploration target maps are included in this release. |
