Highlights:

- Volt received Q3 FY24 Ordinary Revenue receipts of \$0.7 million. Q3 FY24 YTD Ordinary Revenue receipts were \$3.65 million (YTD FY23 comparison \$3.21 million) – up ~14%.
- Volt also achieved record YTD Net Cash from Operating Activities totalling \$1.2 million (YTD FY23 comparison \$1.1 million) – up ~10%.
- Cash at Bank on 30 September 2024 was \$2.1 million.
- The EcoQuip business Q3 FY24 YTD Ordinary Revenue receipts achieved ~56% growth, totalling \$1.25 million (FY23 YTD comparison \$0.8 million). EcoQuip has increased its deployed MSLT hire fleet.
- The Wescone business Q3 FY24 YTD Ordinary Revenue receipts have matched the Q3 FY23 YTD record Ordinary Revenue receipts totalling \$2.4 million.
- In August 2024, The Volt Board approved the manufacture of 30x new EcoQuip Mobile Solar Light Towers (MSLT). The cost of manufacture will be 100% funded by the Company's existing cash holdings and FY surplus cashflows. Perth Workshop assembly of the 30x MSLTs is scheduled for completion in February 2025.
- In October 2024, EcoQuip deployed 4 new MSLT trial units at the Chevron onshore gas operations in Texas, USA expanding the trial to 6 MSLTs. Starting with 2 MSLTs in March 2024, positive operator feedback initiated the trial expansion. Another 2 MSLTs are scheduled for trial deployment in November 2024. EcoQuip is working to secure a broad EcoQuip MSLT deployment across the Chevron onshore gas production assets in West Texas.
- During Q3, EcoQuip and Thiess Pty Ltd (Thiess) advanced EcoQuip MSLT deployment planning at specific Thiess contract mining sites. EcoQuip and Thiess signed an 'evergreen' Plant Hire Contract that provides for the hire of MSLTs and Mobile Solar Communications Towers (MSCT) across all Thiess contract mining sites in July 2024.
- New and existing EcoQuip MSLT demonstration trials were commenced and extended respectively. Further, hire contract negotiations with BHP and other resource sector companies advanced. The Volt Board remains encouraged by the significant market opportunity for the EcoQuip MSLT.
- During Q3, the Volt FY23 ATO R&D Tax Rebate documentation was submitted. \$0.59 million R&D Tax Rebate is expected to be received by mid-November 2024.
- Volt signed an initial agreement with WA Government owned, Synergy providing for the technical and economic evaluation of installing Volt's ATEN Waste Heat to Power system on existing and future Synergy owned power generation assets. Synergy is WA's largest electricity generator and retailer and owns a fleet of OCGT power generation assets. Early-stage discussions are continuing.

EcoQuip OEM Mobile Solar Light & Comms Towers (100%owned)

EcoQuip is the Original Equipment Manufacturer (OEM) of a “market leading” Mobile Solar Light & Communications Tower (MSLT) solution utilising the proprietary EcoQuip Technology Platform.

The EcoQuip MSLT has market-leading illumination and power budget performance, end user telemetry with pre-emptive reliability notifications and remote-control capability. These capabilities have been achieved partnering with US domiciled military fabrication, electronics and software development partners. The MSLT can deliver the ‘mission critical’ power budget performance required for reliable remote site illumination and autonomous mining communications network reinforcement. The EcoQuip MSLT is a zero OPEX (no fuel or refuelling), zero scheduled maintenance, zero emission solution.

The displacement of hired diesel fuelled lighting plant with a hired EcoQuip MSLT delivers up to a 50% total cost reduction, reduces site based mechanical trades required and achieves significant safety risk mitigation benefits.

Since Q3 2021, EcoQuip has deployed a total of 55x new EcoQuip MSLTs to the Chevron operated Gorgon natural gas facility on Barrow Island, WA. The Barrow Island deployed MSLT fleet displaced the entire diesel fuelled light tower fleet used for 24/7 operations on Barrow Island. To date, this deployment has achieved the benefits detailed in Table 1 below:

Table 1 – Salient Benefits of 55x EcoQuip MSLT units displacing 55x diesel fuelled lighting plant units

Benefit Description	Quantity	Equivalent to:
Diesel Fuel Use Abated	~1,000,000 litres	21x B-Double Road Tankers
Scope 1 CO ₂ Emissions Reduction	~2,500 tonnes	~1,200 LV CO ₂ Emissions for a Year
Estimated OPEX Savings	~\$1.2 million	\$1.2 million Profit Improvement

The EcoQuip MSLT demonstration trials at Chevron’s USA domiciled onshore gas operations in Texas has expanded from 2 to 6 MSLTs with imminent plans to expand to 8 trial MSLTs. The potential EcoQuip MSLT fleet opportunity with Chevron in Texas and New Mexico is significant and exceeds the existing Barrow Island EcoQuip MSLT fleet deployment. The growth potential for EcoQuip in the US market is outstanding and the Company is highly focused on expanding EcoQuip operational footprint in the USA during 2024/25.

EcoQuip continues to work with multiple, high quality resource sector companies to demonstrate the capabilities of the EcoQuip MSLT & MSCT solutions. MSLT deployment discussions with Thiess Pty Ltd (Thiess) were initially delayed due a Thiess decarbonisation team leadership change, however confirmation of specific Thiess sites for EcoQuip MSLT deployment are now advancing. EcoQuip signed a Plant Hire Contract with Thiess for the deployment of the EcoQuip MSLT & MSCT across all Thiess contract mining operations globally in July 2024. EcoQuip management is delighted to support the Thiess energy transition strategy.

In October 2024, BHP extended the existing 2+ Year EcoQuip MSLT trial at BHP’s Pilbara iron ore operations. Post trial Hire Contract negotiations have been re-invigorated which is very positive. Should these ongoing negotiations successfully conclude, the potential new EcoQuip MSLT & MSCT fleet growth opportunity could be up to ~200 – 300 units.

EcoQuip recently conducted a successful demonstration trial with a Western Australian based contract mining services business. A hire proposal to for a significant EcoQuip MSLT fleet deployment is under consideration.

The Company is also working with potential new partners to establish new product market opportunities for the EcoQuip Technology Platform. Early engagement & prototype design activities have delivered positive results.

Wescone OEM Sample Crushers (100% owned)

The Company's Wescone business is the OEM of the proprietary W300 sample crusher extensively deployed in the global iron ore and assay laboratory industries. The Wescone OEM offering comprises three sample crushing equipment solutions and installation packages with alternative dimensional product feed acceptance and throughput capabilities.

Wescone sales for the Quarter achieved the Company's budget forecasts. The business continues to supply crushers and service exchange and repair activities for a broad Tier 1 resource sector client base in Australia and Canada. Wescone 'end-user' customers include BHP, BHP Nickel West, Anglo American, Roy Hill, Fortescue, Assmang, Rio Tinto and Glencore.

During Q3 FY24, Wescone Africa Distributor, Solid Process Automation (Pty) Ltd (SPA) failed to comply with the payment terms of the Distribution Agreement signed on 19 March 2021. The recurring payment failure has compelled Wescone to issue SPA with a Letter of Demand and thereafter, Notice of Termination of the Distribution Agreement. During 2023/24 SPA had demonstrated a willingness to partner with Wescone, however the failure to pay for 2x Wescone W300 crushers and refurbishment components supplied to SPA and on sold to a large global iron ore customer and non-compliance with certain OEM QA/QC procedures has led to the termination of these arrangements. The Wescone debtor exposure to SPA is ~A\$130,000. Wescone holds a security position over SPA and limited guarantee from the SPA shareholder, Mr Raynard Meyer. Wescone is continuing to pursue the monies owed to Wescone.

ATEN Waste Heat to Power – Zero Emission Baseload Electricity Supply (100% owned)

The ATEN Waste Heat to Power technology is an industrial heat recovery / organic rankine cycle turbine system that recovers industrial waste heat otherwise vented to atmosphere to generate zero emission, base load electricity. The Company understands that the ATEN system is eligible for Safeguard Mechanism Credits (SMC) pursuant to the new SMC carbon abatement legislation in compliant installations. ATEN enjoys Australian Innovation Patent certification (AIP # 2020202347).

ATEN has a unique competitive advantage being capable of generating baseload, zero emission incremental electricity for a ~60% lower CAPEX and ~50% lower lifecycle cost compared to annual generation equivalent solar and wind installations.

ATEN is also compatible with and complimentary to existing solar / wind installations connected to remote off-grid and on-grid electricity networks by enhancing system capacity and gas fuelled generation efficiency (+15-30%) necessary to support the reliability / stability of high penetration Renewables and battery storage enabled networks. Further, ATEN has the potential to reduce network requirements for incremental high-cost storage and complex ancillary support systems. In this circumstance the ATEN technical and business case is increasingly compelling.

Alternatively stated, ATEN installed on an OCGT power station supplying on-grid electricity has the potential to displace incremental gas fuel usage (reduced emissions) and/or the need for incremental solar / battery installations designed to generate and store electricity for nightly despatch (reduced CAPEX). The ATEN salient benefits include:

- Increasing OCGT power station efficiency reducing gas consumption and emissions by ~15 – 30%;
- A small site footprint providing for installation on an existing power station site footprint and using existing connection infrastructure significantly reducing approval timelines;
- Short construction period of 6 – 9 months;
- Low LCOE (<A\$55/MWh¹) and low marginal generation cost (~\$20/MWh);
- Materially reduce grid stability risks (providing baseload zero-emission, low-cost supply and system inertia); and
- Avoid potential transmission system upgrade CAPEX required to connect intermittent Renewables.

The ATEN Waste Heat to Power system also delivers robust, baseload zero emission generation to displace gas fuelled power generation in significant industrial precincts that vent a significant OCGT waste heat resource from compression and electricity generation (i.e.: LNG facility compression & power generation).

Installing an ATEN system on an existing OCGT peaking power station can convert a peaking station to achieve high efficiency and supply low-cost, baseload electricity to displace coal fuelled baseload supply and reduce generation equivalent carbon emissions by ~60%. Peaking power stations are significantly under-utilised sunk capital investments and converting these assets to >95% utilisation at efficiencies of between ~43% - 50% delivers the lowest cost CO₂ abatement available when displacing coal fired baseload generation.

As Climate Change Government subsidies accelerate electricity supply network Renewables penetration; electricity supply generators, transmission network owners and customers are increasingly focused on consequent cost increases and incremental supply reliability risks.

In May 2024, the Australian Federal Government released its 'Future Gas Strategy' highlighting the critical electricity supply security role of natural gas fuelled power generation capacity. ATEN Waste Heat to Power is ideally placed to increase baseload reliable generation by the existing operating & connected OCGT power generation fleet by 15% - 30% without any incremental fuel gas requirement.

HYTEN – Waste Heat to Hydrogen (100% owned)

Volt's HYTEN Waste Heat to Hydrogen system comprises the ATEN system integrated with either solid oxide, PEM or alkaline water electrolyser sub-systems to produce zero emission hydrogen fuel/feedstock gas. Engineering study activity to date has highlighted that HYTEN can produce zero emission hydrogen for a LOCH² of ~US\$2 – 4/kg. This is a ~50-70% lower cost than unsubsidised "Green Hydrogen" systems powered by new wind and/or solar renewable electricity generation.

The Volt Board remains excited about the potential of the HYTEN technology to facilitate existing LNG facility assets, natural gas pipeline compression stations and some power station assets to make a significant contribution to the energy transition by becoming low-cost, zero emission hydrogen producers by exploiting waste heat vented to atmosphere at existing energy infrastructure.

To compel the uptake of a zero-emission hydrogen industry, hydrogen must be delivered to markets for a price at least equivalent to traditional SMR hydrogen production cost. The potential for the on-site use of HYTEN zero emission hydrogen to displace fossil fuel derived hydrogen as a zero-emission feedstock for higher value fertilizer, ammonia or fuel refining production is persuasive.

Corporate & Appendix 4C - Salient June Quarter Financial Information

The Company generated negative Operating Cashflow of ~\$0.06 million for the Quarter and held a cash balance of \$2.1 million as at 30 September 2024. Ordinary Revenue receipts totalled ~\$0.68 million. As at the date of this report, the Volt Group cash balance is ~\$1.9 million.

Cash payments for the September Quarter totalled ~\$0.95 million comprising:

- Research & Development and IP - \$0.18 million
- Staff Costs - \$0.21 million
- Manufacturing Costs - \$0.20 million
- Admin, Legal, Other Costs & Grants (net) - \$0.36 million

Related Party payments for Director services for the Quarter totalled \$51,330 (incl. GST) representing 1-month of Executive Chairman fees & ~2-months NED fees.

End

About Volt

Volt Group Limited (ASX: VPR) is an industrial technology company that develops and commercializes ESG focused, zero emission power generation and hydrogen production technologies and next generation auxiliary mining equipment.

The Company's businesses develop and commercialise innovative proprietary OEM equipment delivering "step change" client productivity & cost benefits and reduce scope 1 emissions.

Business Activity Summary

The activities of our businesses include:

-
- **ATEN (100%)** – ATEN is a zero-emission waste heat to electricity generation equipment solution. The ATEN is at an advanced stage of initial commercialisation. ATEN enjoys Australian Innovation Patent certification. Refer below.
 - **HYTEN (100%)** – HYTEN (patent pending) is a zero-emission waste heat to hydrogen solution developed to capture and exploit industrial waste heat (including gas turbine exhaust heat usually vented to atmosphere) and produce low cost, zero emission hydrogen fuel gas. HYTEN comprises the ATEN Waste Heat to Power system integrated with either an alkaline, PEM or solid oxide electrolyser to produce the hydrogen.
 - **Wescone (100%)** – the proprietary owner of the globally unique Wescone W300 sample crusher predominantly deployed throughout the global iron ore sector. Wescone has a successful 25+ year operating track record and recently developed a new crusher with larger dimensional acceptance, reduction ratio and durability specifications.
 - **EcoQuip (100%)** – developer and owner of a 'best in class' Mobile Solar Lighting & Communications Tower equipment solution incorporating robust design attributes including US military spec design & build quality, solar / lithium (LFP) battery storage solution and an advanced power management, data telemetry & control system. EcoQuip solutions are capable of zero emission, high performance mobile illumination, LTE, Wi-Fi mesh and point to point microwave network reinforcement and environmental monitoring and surveillance.
 - **Acquisition / Development Strategy** – The Company actively pursues opportunities to expand its broader zero emission power generation and contract services capability, high yield infrastructure asset footprint & innovative equipment solutions.
-

About the ATEN Technology: The ATEN comprises a modular, power generation equipment package capable of harvesting 'low' grade industrial waste heat to generate zero emission baseload electricity.

ATEN generated electricity is expected to significantly reduce 'energy intensive' industry operating costs via the displacement of grid sourced electricity or fossil fuel usage associated with electricity generation. The global industrial complex vents a significant quantity of 'low' grade waste heat to atmosphere. This quantity of unexploited waste heat presents an outstanding opportunity for the commercial roll-out of ATEN.

The ATEN's simple, high efficiency design and modular configuration - developed to maximise its integration capability - provides a low capex, uniquely compatible and scalable solution for the exploitation of 'low grade' industrial waste heat from existing multiple sources. Volt's priority target markets for the commercialization of the ATEN Technology include the resources and industrial processing sectors.

The salient ATEN Waste Heat to Power technology benefits that resonate with power station owners include:

- Baseload, zero emission incremental power generation (Scope 1 Emission reduction) compatible with Solar Hybrid systems with high penetration;
- Levelised Cost of Electricity (LCOE)¹ up to ~50% lower than gas and ~80% lower than diesel generation;
- LCOE¹ ~50% lower than an equivalent annual generation Solar/Battery Energy Storage System (BESS);
- CAPEX ~60% lower than Solar / BESS based on identical annual generation and zero emission performance;
- Hydrogen co-firing capability;
- Safeguard Mechanism Credit legislation eligibility; and
- Zero water & operational personnel requirements

The ATEN system is eligible for Safeguard Mechanism Credits (SMCs) in certain circumstances pursuant to Australia's new Safeguard Mechanism legislation designed to reduce greenhouse gas emissions at Australia's large industrial, resource and energy sector asset fleet.

1 Levelised Cost of Energy (LCOE) is based on new ATEN zero emission capacity and operating costs and variable costs of fuelled generation (where relevant) in the WA Pilbara region and the ARENA LCOE calculation methodology @ 8% discount rate and 20-year project life including SMCs (\$25/SMC) and Solar RECs (\$40/REC) as applicable.

2 Levelised Cost of Hydrogen (LCOH) is based on the LCOE methodology above inclusive of OEM supplier & EPC installation estimates of the capital and operating costs of hydrogen production via alkaline water electrolysis in the WA Pilbara region.

Quarterly cash flow report for entities subject to Listing Rule 4.7B

Consolidated statement of cash flows		Current quarter \$A'000	Year to date (9 months) \$A'000
4.	Net increase / (decrease) in cash and cash equivalents for the period		
4.1	Cash and cash equivalents at beginning of period	2,370	1,547
4.2	Net cash from / (used in) operating activities (item 1.9 above)	(62)	1,203
4.3	Net cash from / (used in) investing activities (item 2.6 above)	(154)	(519)
4.4	Net cash from / (used in) financing activities (item 3.10 above)	(39)	(116)
4.5	Effect of movement in exchange rates on cash held	-	-
4.6	Cash and cash equivalents at end of period	2,115	2,115

5.	Reconciliation of cash and cash equivalents at the end of the quarter (as shown in the consolidated statement of cash flows) to the related items in the accounts	Current quarter \$A'000	Previous quarter \$A'000
5.1	Bank balances	2,115	2,370
5.2	Call deposits	-	-
5.3	Bank overdrafts	-	-
5.4	Other (provide details)	-	-
5.5	Cash and cash equivalents at end of quarter (should equal item 4.6 above)	2,115	2,370

6.	Payments to related parties of the entity and their associates	Current quarter \$A'000
6.1	Aggregate amount of payments to related parties and their associates included in item 1	51
6.2	Aggregate amount of payments to related parties and their associates included in item 2	-
<i>Note: if any amounts are shown in items 6.1 or 6.2, your quarterly activity report must include a description of, and an explanation for, such payments.</i>		

Payments totalling \$11,000 (incl. GST) were paid to Isapia Pty Ltd, a company related to Mr Simon Higgins, representing 3 months' non-executive directors' fees.

Payments totalling \$7,330 (incl. GST) were paid to Torre Corporate, a trust related to Mr Peter Torre, representing 2 months' non-executive directors' fees.

Payments totalling \$33,000 (incl. GST) were paid to Renewable Initiative Pty Ltd, a company related to Mr Adam Boyd, representing 1 months' Executive Chairman fees.

7. Financing facilities	Total facility amount at quarter end \$A'000	Amount drawn at quarter end \$A'000
<i>Note: the term "facility" includes all forms of financing arrangements available to the entity. Add notes as necessary for an understanding of the sources of finance available to the entity.</i>		
7.1	-	-
7.2	-	-
7.3	3,000	281
7.4	3,000	281
7.5	Unused financing facilities available at quarter end	
		2,719
7.6	Include in the box below a description of each facility above, including the lender, interest rate, maturity date and whether it is secured or unsecured. If any additional financing facilities have been entered into or are proposed to be entered into after quarter end, include a note providing details of those facilities as well.	
	<p>In April 2022, Volt subsidiary EcoQuip Australia Pty Ltd secured a total of \$3 million in new credit financing facilities with Westpac Banking Corporation. These financing facilities consist of a \$2 million Revolving Equipment Finance Facility and a \$1 million Trade Finance Facility and are secured under a general security agreement. At the end of the Quarter, the facilities were drawn to \$0.281 million.</p> <p>The current interest rates that apply to the above facilities range from 6.21% to 6.36%.</p>	

8. Estimated cash available for future operating activities	\$A'000
8.1	(62)
8.2	2,115
8.3	2,719
8.4	4,834
8.5	Estimated quarters of funding available (item 8.4 divided by item 8.1)
	78
<i>Note: if the entity has reported positive net operating cash flows in item 1.9, answer item 8.5 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.5.</i>	
8.6	If item 8.5 is less than 2 quarters, please provide answers to the following questions:
8.6.1	Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?
	Answer: Not applicable
8.6.2	Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?
	Answer: Not applicable

8.6.3 Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?

Answer: Not applicable

Note: where item 8.5 is less than 2 quarters, all of questions 8.6.1, 8.6.2 and 8.6.3 above must be answered.

Compliance statement

- 1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.
- 2 This statement gives a true and fair view of the matters disclosed.

Date: 31 October 2024

Authorised by: By the Board

(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standard applies to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg Audit and Risk Committee]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
