### **ASX Release**

**Sydney, Australia – 10 May 2023**

### **Operator XR launches Scenario Builder Software**

xReality Group Limited (“XRG” or the “Company”) is pleased to announce that its subsidiary, Operator XR, a pioneer in advanced tactical training solutions, has launched the Beta version of its ground-breaking Tactical Software Development Kit (SDK). This innovative tool empowers special forces, military, and law enforcement agencies to create their own tailored, immersive, and realistic training scenarios, seamlessly integrating with Operator XR's immersive tactical rehearsal systems.

The Operator XR Tactical SDK will enable end users to develop custom active shooter simulations, mission rehearsals, and other specialised scenarios, ensuring elite forces are optimally prepared for real-world challenges. Compatible with the entire suite of Operator XR immersive training systems, the Tactical SDK features an intuitive visual editor and a powerful scripting API for scenario creation. The open architecture will enable integration with most common military simulation software packages.

End users can access a growing library of pre-built 3D assets and environments, to create fast to build and visually engaging scenarios. Advanced AI and behaviour customisation capabilities will enable more dynamic and challenging training experiences, with characters that exhibit custom behaviours, attributes, and decision-making processes. The SDK will support multi-user collaboration, enabling real-time scenario creation and optimisation between developers.

Performance optimisation tools and in-depth analytics as part of the Operator XR platform ensure fluid and immersive experiences for trainees while providing valuable insights for scenario improvement. As the SDK can operate offline, it can adhere to the highest security standards and relevant regulations, enabling classified scenario development and protecting intellectual property.

The Operator XR Tactical SDK will support a wide range of training scenarios, such as active shooter simulations, mission rehearsals, tactical decision-making, close-quarters combat, vehicle interdictions, communication, teamwork, and leadership exercises, as well as intelligence, surveillance, and reconnaissance training.

The launch of Operator XR's Tactical SDK further solidifies XRG's commitment to delivering innovative virtual tactical rehearsal systems to the global special forces, military, and law enforcement markets.

XRG CEO, Wayne Jones said, “As a result of collaboration with multiple agencies within defence and law enforcement, the release of this software will dramatically increase the scenario driven training available when used with the OP-1 products. Our customers will reduce their training costs significantly by having the ability to create any live target or range complex without the need for external support”.

This ASX Release is authorised by the Board of xReality Group Limited.
